There is also the RTC issue itself, which apparently could not be fixed with firmware changes. If you have both a 436 and 536, Uniden requests that you wait until they have parts for the 436 before you send both units in. A pretty reasonable request, at least I think so.

Some people are disappointed in the Analyze feature, but since I don't use it, I can't really comment. In general though, I'd expect that Uniden would fully develop their software/firmware.

Finally, there is the lack of a Siren App for the 536. I'm looking forward to this one since I don't have an iPhone.

I think it's important to keep in mind that Uniden doesn't have limitless resources. They have only so many software and hardware engineers and a lot of products both existing and in development.

Now that the RTC issue has a fix, I expect that Uniden will turn their resources to developing both Siren and Analyze.

Overall though, I like the x36HP scanners. I have two 536HPs and a 436HP. The RTC issue has occurred in one of the 536s and the 436. I'd not be surprised if the second 536 also has the issue at some point.

As far as customer service, one of my 536s lost WiFi connectivity a few months back. It's well out of warranty, so I expected to pay for the repair. I sent it in and Uniden repaired and returned it to me at no cost. I'm happy with their customer service.

Shouldn't be - battery is a seperate battery. My car has two batteries. The 'car' battery, and a secondary battery. Secondary battery shuts off 1 hour after the ignition is switched off, and turns on when the car is started (or by pressing a switch). Second battery only charges when the car is running.

I've also tried turning on the car, waiting, and then turning the 536 on, and again same thing, half the time (maybe more)m the scanner freezes.

Your listing of problems is not quite accurate. The WiFi dongle/Siren App abilities have NOT been met, even with the Windows Siren version. It's been two years now? And still no fix. As advertised, these radios were supposed to have more extensive WiFi abilities. (It is my understanding Uniden is still working the problem. Who knows for sure? Mr. Opitz does but I haven't heard much from him on this particular aspect of the scanner. And Mr. Opitz's declaration of only posting official notices from Uniden when something new was availabletp post is not helping those of us who are still waiting and wondering). How about an update Mr. Opitz? You can keep all the boilerplate apologies posted, all are merely good manners-right out of the "Good Business Practices Manual". Nice to have but apologies don't get it done, fixes however, do.

The BCDx36HP was the first time I was financially able to do it right... Jump upon the initial release of the latest and greatest. And I purchased two 536's and one 436. Boy did I ever pick the wrong series of scanner model!

Bill

On Oct 21, 2015, at 4:32 PM, Gary Saffer ghs159@comcast.net [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

There have been a number of issues with these scanners, especially the 536HP.

First the headphone jack issue, for which Uniden issued a repair campaign similar to this one. That was traced to a manufacturing issue where some units had an incorrect component installed.

Then there was the WiFi dongle issue. Which turned out to be a driver/firmware issue which took longer than anyone (including Uniden) to resolve because the issue lay with an outside supplier.

There is the dim display issue, for which a fix seems to have been developed and if you send in your 536 for the RTC fix and attach a note, Uniden will evaluate and repair as needed.

There is also the RTC issue itself, which apparently could not be fixed with firmware changes. If you have both a 436 and 536, Uniden requests that you wait until they have parts for the 436 before you send both units in. A pretty reasonable request, at least I think so.

Some people are disappointed in the Analyze feature, but since I don't use it, I can't really comment. In general though, I'd expect that Uniden would fully develop their software/firmware.

Baa Humbug. Ask yourself this one question... If Uniden had known of these issues beforehand, do you really think the radio would have gone into production? The answer is Nope! The model was admittedly rushed into production with expectations it would grab market share during the known indecisiveness period when GRE was in a state of flux, not knowing if they would be able to relocate their operation after the Chinese Government told them their manufacturing facility was about to become history. Uniden initially promised the WiFi dongle issue would work as advertised within the first quarter of the year of release. Two years later and it still isn't performing as advertised.

You've got to read between the lines. Uniden's business plan for the BCDx36HP's had more to do with the bottom line than customer satisfaction. Which is understandable and expected-they are not in business to loose money. They just didn't anticipate the severity of the problems encountered. And that got them a load of unsatisfied customers, which hurt their reputation.

My two 536's both suffer from the clock issue and the dongle problem. I'm waiting them out however, the clock "fix" is here and I hope the rest is not far behind.

I'm just tired of anyone sticking up for a corporation that chooses not to come clean about the scanner model and issues apologies right out of the "Good Business Practices Manual" instead. Uniden is better than that. But after the lawyers get through with all the liability concerns, it's tough for corporations to admit to anything!

On Oct 22, 2015, at 9:16 AM, 'Scott Heath' radio-man1@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

First of all, this certainly is an excellent group! Most of you are quite knowledgeable and will even admit it if the information is lacking! Some of the other groups.... well.... not so much! (I admit my skills are only intermediate!)
Anyway, I have three 536s (among other radios) and I'm very happy with them. The Siren app actually works quite well - I can walk around most parts of my house and listen to the scanner's audio. The weekly database updates are great and the P-25 decoding works very well also!
Problems? Well, there have been a few "buggies" but one can expect that in a scanner that "changes the game"! This is new technology to the scanner world and there will be a certain amount of "risk" involved!

Obviously, some here have ever managed a business. Uniden is not some massive corporate blob with unlimited resources, EVER until they get to the size of IBM, Intel, Microsoft or Apple and a few more (Amazon, Google). Uniden is a middling sized company with finite resources of money and staff that is being pulled in numerous directions due to the product lines other than radios. They're obviously stressed, no big surprise, many other companies are too.

The clock problem is a non-issue to most folks with the latest firmware. Are THAT many people actually recording the audio for later use? If you are, the clock is ONLY used for file naming; that's it, no more. It's not the end of the world if it shows anything else, you'll figure it out. If it's task critical, they're repairing them, your prayers are answered.

The WiFi works too, I use it often. With the latest firmware in both the scanner and the dongle, it works. If it doesn't, email Uniden for a replacement.

The Siren app works 'ok' on iOS. They need to port it to Android and finish fleshing it out so that is has ALL the promised features adding those that are in the computer apps as well. Ideally, being able to use ANY command or control via Siren would be ideal but is likely unrealistic. Adding a multicast program like VLC would be a sweet addition too so you could hear/control your scanner anywhere on the Internet. In the meantime, there are other options to use if you want to hear off your LAN.

Yes, the updates are overdue. Yes, that's annoying. Obviously, there are issues or conflicts at the company level that they can't discuss as it would hurt their image more than a couple ticked off customers making noise. That would only tighten their ability to make progress from corporate stress.

It's a SCANNER folks, not life or death. While some use it as part of their business (I used to when I was a Fire Fighter)... ultimately, it's for entertainment and being aware of your environment (or for government watching). While we all paid money for them, the hardware itself works as just that, a scanner.

Have some faith. Uniden will either get it together, or not. If they do, we all win. If they fail, we ALL lose, Uniden too. If you have a complaint, emailing them directly is the real answer. Whining here does nothing to help anyone and it gets tiresome.

Well stated Rick. Thanks for the input. I will agree to disagree on a point or two but as you say, it's not necessary to rehash what has already been expressed way too many times. If I have one real gripe, which I have forwarded to Uniden (and no reply was received) it's this... I just stated it. They did not respond. When asking about WiFi and are they continuing to work towards what their INITIAL intensions were, we hear nothing. No updates. Don't even think about dialing their phone number... You'd just be wasting your time. It seems the attitude is wait long enough and it will go away.

Anyhow, I appreciate your input. And continue to accept that which is realistic and/or factual. I will also continue to disregard any part of a post that attempts to defend the Uniden Corporation. They don't need any help in that regard. Praise will certainly be forthcoming upon their total success with all that is found and corrected.

Not to extend this, but that data is about the time the market crumped and is 9 years old. It hit a lot of companies hard, some were totaled. Sales is the gross income, not net profit (did they MAKE money or take a loss?).

Then consider that they also make two way radios (commercial, FRS and CB), telephones, security systems with cameras and ... Each division takes a slice of the pie, NOT in proportion to any other slice.

The companies I mentioned deal in the tens of Billions where a million is pocket change (I wish). Those megalith companies are stressed too, but it's at a MUCH different level.

Uniden is still a middlin sized corporation and obviously stressed. Buy their stock? No, not likely until they at least pull out of the slump better. Patience? Yah I can do that. The limitations by insufficient software? I've already worked that out and it wasn't hard to do*. I figure they'll catch up and make things right... or get flushed away if they fail.

Either way, it's a heckuva scanner. Using the GPS input has helped too, I was aware of a traffic issue an hour before I got to that part of the highway and if it was still an issue when I arrived (was shut down), I could have easily found a parallel road to by pass it. I was thinking about getting more of them from sheer laziness of moving it to the RV to the house to the RV... to the car to truck to car... :-p

Rick nhc

* adding Siren control outside the LAN isn't difficult, poke a hole in the firewall and use port forwarding to direct port (notes not in front of me) to the scanner. Audio is trickier and requires a port range, not a single port, plus the audio control ports (two ranges). I've done this with Siren, but it's tricky (because the standard is so broadly written you have to do research on each software) so...

If you want to be the only one hearing it, you can Skype to a computer with the scanner hooked up to the soundcard mic input (there are usually more than one, tell Skype to use THAT one). (I use TeamViewer to look at the computer, so I can use the apps to control it too, it passes whatever audio the computer makes, one app passes the wifi audio to the computer, so I can still use the soundcard AND hear the scanner) then Skype on your device into that computer, done. Or use VLC to rebroadcast it, even multicast it. A web page interface is trickier and I don't write/speak HTML, but I know it can be done.

These apps (except Siren) are freely available on many platforms.
Thinking outside the box brings rewards. Have FUN with what is
available, connect them in new ways, PLAY! You're both a ham AND
photographer, you should be all over that; both fields demand playtime.

Sorry Rick,

I don't even come close to giving consideration to Uniden. Listing possible reasons for failings by them falls on deaf ears. Correct me if I'm wrong but I believe GRE came out with the PSR-800 just before Uniden's "x36HP's". Uniden's fear was that GRE would gobble up market share and released too soon, knowing full well the models weren't ready. So they offered apologies and a scheduled fix date for the Siren/dongle issue, within the first quarter, then the second quarter and so on... I base my opinion of Uniden on what occurred, the chronological order of events surrounding this series of scanners and believe we as consumers should have been treated to more transparency than Uniden offered. Uniden's Paul Opitz was there on Utube with unveiling vides and instructional videos. A marketing ploy with the added advantage of free advertising. I suspect that Utube effort was driven by a need to "catch up" to GRE, who, by the way did not produce any Utube instructional videos that I am aware of, leaving that task to the users instead.

On the other side of this tarnished coin, I am required to say this... I had one of the GRE PSR-800 portables and compared it side by side with the Uniden BCD436HP. I kept the Uniden product and sold the GRE. Both good radios but my loyalty to Uniden and their "pairing" the radio up with a "matching" base/mobile unit, the BCD536HP, told me it was the smarter way to go. I like the x36's and as stated, am sticking with them. My loyalty towards Uniden has not wavered... Just miffed at them releasing a known, still in development, product. (Hell, I've got more issues with the aftermarket ARC software than the radios! Excuse my French.)

Good talk. I also think we should close this thread as, once again, we are rehashing a topic that has been beaten to death. (This is where the group releases a collective sigh and says "Finally"). The scanners are a wonder of multifaceted abilities, making them remain (in my estimation), a scanner that continues to remain as "new". I haven't yet finished this exploration, more amazed with each new ability. Makes one wonder how Uniden is going to follow with newer products! How can they top this? Maybe a smaller form factor for the 436 like the BCD396XT and additional digital modes?

And I will explore that "poking a hole in the firewall" you suggest. If I can get all that was promised originally with this workaround I will be content.

Bill

2474. Corrupted Sentinel data base

Yahoo group: BCD536HP
Date: 2015-10-27 22:15:47 UTC
From: cfwb@...
Topic: 2474 Message: 2474

I brought up my BCD536HP Sentinel program and received an error message that that data base was corrupted. It had been working fine for about a year.
I deleted the Sentinel program and downloaded another copy and installed it.
I received the same error message that the data base is corrupted.

HELP ! Can anyone shed any light on my problem?

Is the data base file hidden out of the BCD536HP program file?

Thank you in advance.

Probably your SD Card needs to be re-formatted? Using the Uniden Sentinel software, click on the various headings and look for something that lists 3 options, the last (or bottom one) deals with dumping (or formatting although it doesn't say that) the current data stored on the SD Card. The software will re-set up your SD Card (hopefully) making it compatible with the radio and you can then reinstall your Favorites Lists. Give it a couple of tries.

I went another route first and removed the card from the radio, inserted it into the computer and formatted the card first. I then reinstalled it in the radio and did the above. It took a couple of try's but it worked. So before you replace the card thinking its corrupt and can't be salvaged, try this. Nothing to loose if it works saving you the expense of the new card. Sorry I can't be more specific as to what the software calls the headings, I don't have it in front of me. But expect there are other replies coming that will-if not I will post it later today.

The issue isn't the database on the scanner, but the database on the computer that's corrupted. You may have to manually delete the folders containing the database after uninstalling the Sentinel software.

On my Windows 10 box, it's found in C:\ProgramData\Uniden\HomePatrol_Sentinel\Database

If you delete the entire contents of the C:\ProgramData\Uniden and all its underlying folders then you can reinstall Sentinel from a fresh download and update the database.

Thank you. I think that's just what I was looking for. I sort of figured when I deleted the Sentinel program a database with in another location and not being deleted.

I'll look for it now in the suggestions you gave.

Thank you,
Carl

It says it's corrupted even before I have a chance to update the database.
It appears when I delete the Sentinel program not everything is being deleted so it corrupts the newly installed program.

From: Carl
Topic: 2474 Message: 2484

My corrupted Sentinel program was fixed by deleting the hidden Sentinel database at the location Bob gave in my Windows 10 computer.
I was able to reinstall the Sentinel program with no problem after the deletion. I’m up and running again.

Thank you Bob and everyone else for your help.

Hi Joe,
Programming example please - I've found the S.A.M.E. number and a table of the weather "events". But it just isn't clear to me how this feature functions (must be getting old).

My understanding is the default settings on the WX tab of the profile editor (Sentinel app) would lead me to believe -
1. edit "name" to suit your taste.
2. edit the "FIPS x" box(es) by entering the numerical code corresponding to your county(s) of interest.

For example "name" could be Cowlitz and FIPS 1 would be 053015 for Cowlitz county, Wa.

Then to activate the weather alerting feature I find no other way than to select it from the front panel of the unit (MENU > WX OPERATION > Weather Operation > Weather Alert > ALL FIPS).

And then weather monitoring would have to be enabled from the front panel by selection FUNC > 6 (wx) on the keypad, correct?

Thanks for the response and the help.

Regards,
Tom B.

2490. Re: [BCD536HP] Re: BCD536HP - programming SAME & FIPS

Yahoo group: BCD536HP

From: MCH
Topic: 2485 Message: 2490

Forget about the FUNC-6. That has nothing to do with it. That is Weather Priority which is a completely different function that does not use the FIPS codes.

You have everything else correct except the activation. That would be:

MENU
WEATHER OPERATION
WEATHER ALERT
(select the FIPS slot you programmed)

ALL FIPS means it will alert on any code. Using the slot you programmed means it will only activate on the FIPS code you set.

Be forewarned!!! The scanner complies with the federal Weather Alert standards which means you should be prepared to be rocked out of your chair when an alert goes off (think smoke detector).

Do _*NOT*_ use the FIPS/SAME feature _*EVER*_ while driving a car. *YES IT'S THAT LOUD !!!* It WILL cause an accident or at least a sudden lane change or require a linen check or ...

No I'm not kidding, it's over the top loud. It's the exact same reason I disable that feature in my dual band in my car and truck (but leave it on in the trailer once I set it to local values).

NWS provides a weekly test (Wed here in NCal) if you want to hear it. But you've been warned.

2495. Re: [BCD536HP] Uniden repair time

Yahoo group: BCD536HP
Date: 2015-11-12 15:28:26 UTC
From: Gary Saffer
Topic: 2487 Message: 2495

Uniden is not sending return information for 436 owners at this time. If someone owns both (as do I) the only way to get the 536 fixed faster is to fill out separate repair requests. Which UPMan has requested we not do in order to reduce Unidens shipping costs.

Date: 2015-11-12 16:16:54 UTC
From: tom kosner
Topic: 2487 Message: 2496

I wanted to chime in as I had sent my 536 in recently and from the time I mailed it in until the time it was received back at my home, it was approximately three and a half weeks. They did a good job, it worked well from the get go. I was charged about $89, thought it was worth the effort. Of course that's only my opinion. Got the hard copy to send it in from them online after the initial call. I have a 436 as well and I did not miss anything having that. Only thing I don't like about the 436 is that you cannot charge the batteries while in operation but had extra rechargeable batteries, so no loss at all.

From: Evan Platt
Topic: 2446 Message: 2497

Well, this unfortunately became a moot point. I got sideswiped about 3 weeks ago, and the car was determined a total loss. I'm OK, car obviously isn't. Got a friend to help me remove all the toys from the car (brute force method on a lot of things, wasn't too concerned about how the car looked after removal LOL)...

Got a 2014 Ford Focus, 11k miles. Nice condition. Replacing the funky stereo with a dual din setup, so I'll have a stereo and the scanner below. Pictures to come when it's done (scanner just got to Uniden, so, probably a few weeks).

The update was for the SD Card only. It corrects the corruption on the card.

Sent via the Samsung Galaxy S® 6, an AT&T 4G LTE smartphone-------- Original message --------From: "'Scott Heath' radio-man1@juno.com [BCD536HP]" <BCD536HP@yahoogroups.com> Date: 11/12/2015 1:33 PM (GMT-05:00) To: BCD536HP@yahoogroups.com Subject: [BCD536HP] Latest software update?

About a week or two ago, there was a new firmware update for the Uniden 536.
Does anybody know what the new updates involved? By any chance, might it include getting the current time from a GPS signal? That would help quite a few of us users, I'm guessing!

More accurately, it reduces the chances of corruption.
Once it's corrupted, it may not be recoverable.

From: Gary Saffer
Topic: 2498 Message: 2501

The biggest part of the update changed the firmware so that audio playback can be disabled.

Another feature was supposed to automatically default to serial port if a USB cable was plugged in to the front port. There was an issue that crept into the production version of the update and that feature doesn't work.

Uniden has promised a patch to fix that problem and has promised that a new, but unnamed feature will be included in that release.

From: Rick Bates (WA6NHC)
Topic: 2487 Message: 2502

It's generally a better idea to charge the batteries in an external charger that varies the voltage and current for the best charge for the format of the battery (Lithium, nickel hydride etc.).

In the meantime you can still use the wall wart to run the radio.

From: JAN FINE
Topic: 2507 Message: 2507

You can run the BCD436HP without batteries.
You can get one of those mini-chargers, for cell phones.
They run about $10. Connect it via USB cable to the scanner.
Batteries in or out you will be able to use the scanner.

On the subject of batteries... And under the topic of "Wishful Thinking"... I've longed for a rechargable battery in the form of what is seen with portable two-way radios. The battery packs on the amateur radios are nice because they can be charged in a desktop charger either by themselves or while attached to the radio. I thought by now the scanner market would be embracing the same concepts. Presently, I can under a battery pack is probably overkill, requiring a sturdier radio case to meet with. And higher capacity batteries, allowing longer use time is considered a luxury, the duration time of the 3 AA cell rechargeables sufficing. But I would love to see both a higher yield form, possibly lithium-polys currently used in the RC market, in a detachable battery pack with the desktop charger.

Just sayin,

Bill

Here is the link to the latest Uniden FW and Sentinel files:

http://info.uniden.com/twiki/bin/view/UnidenMan4/BCD536HPFirmwareUpdate
http://info.uniden.com/twiki/bin/view/UnidenMan4/BCD536HPFirmwareUpdate

The latest FW is version 1.09.02 released on 27 October 2015.

The latest Sentinel is version 1.05.00. Uniden states you need this version of Sentinel if you install the latest FW.

Be aware though that the latest FW is a bit buggie.

2513. Programming and Proscan issue

Yahoo group: BCD536HP

From: ke4ah1977@...
Topic: 2513 Message: 2513

Yesterday, I did my routine weekly check for firmware updates and Database download. I did it by using the USB to Mini-USB cable like I always do. Well, when I disconnected the cable from the scanner, after rebooting, it said there was nothing to scan. I put the MicroSD card into the computer (after formatting the card). Sentinel loaded and gave me an error saying the it was corrupted. So, I closed sentinel and got a new card, put it in the scanner and got the msg to clear user data. I plugged the USB cable into the scanner and tried to bring up Sentinel. I got an error msg saying something about the MicroSD card not beling plugged into the computer After plugging the MicroSD card into the computer and starting Sentinel, it did not show my Favorite list but did show the database. I attempted to go into the database and redo my favorite list from scratch but there was no date in the USA/Canada files. So, I tried updating the database but it said I had the latest one. I clicked on USA but there was NO data in the file. I uninstalled Sentinel and after reinstalling it, I was able to download the latest firmware and data base. I was able to install a new profile I and database/favorite onto the new card, put the card in the scanner and it works. It will not allow me to use the USB cable. I have to put the card into the computer.

Proscan now does not "see" the scanner. So it won't work.

I hooked the scanner to my laptop which also had sentinel and Proscan on it but, the laptop will not recognize the scanner any longer nor will Proscan "see" the laptop. Everything was working perfectly until the weekly update was done.

I have no clue what's going on???

Time to call a witch doctor, because it sounds like your scanner is possessed! Or use the force Luke... A four pound sledge hammer ought to do it. Wow! I feel your pain Alan. Sorry for the levity, having nothing constructive to offer after reading the most perplexing situation to date, I started to chuckle... Not because I found anything funny with what you write... It was out of frustration. That frustration demanded some sort of levity in order for my universe to remain in balance.

This morning I tried updating the dongle firmware using the Uniden instructions. I've successfully done this before but this time I don't know, something doesn't feel right. I put it aside and will revisit it later. It seems as I understand more about the numerous facets of this scanner, the more disillusioned I become. They get one issue fixed and another pops up.

I figure I must have pissed off the guy upstairs big time... I tripled my problems buying 2 BCD536HP's and 1 BCD436HP! Oh well, maybe Uniden's next "premier" scanner will have all the bugs out of it, whenever that happens.

Bill

Very fast turn around time from Uniden (at least by my standards).

Ref #: #5635

Oct 30 - Sent the request and got the reply back the same day with the Repair Campaign Instructions.
Nov 6 - Shipped to Uniden via UPS.
Nov 12 - Arrived at Uniden repair center and placed in queue.
Nov 16 - Repair done and shipped back.
Nov 18 - Received repaired 536 at home. Scanning...

12 days from shipping to Uniden and getting it back from Uniden.

Hi Group
Can anyone give me any information on how the BCD 536 is doing as far as bugs fixes ?
Is it now OK to buy one have it run/operate more that 6 months or a year? What would be the new
Serial number to look for with no bugs or reduced bugs at this time

And is there any problems programming the radio through a computer ? What software is recommended ?
any firmware updates available ? yeah I know a lot of questions but the price is high and I don't want to
send it back to UNIDEN for any repairs.

Thank you all for replying

Ron,

I've had two 536's and one 436 since they were introduced. I use the Butel ARC Software religiously. My current observations of the radio rate it on a scale of 1-10 @ 8. I had rated it at 4 while waiting for Uniden to work out the dongle... Which was never done to the original advertised expectations. But close enough I guess. All other issues have corrective actions identified so it is now an 8 in my book. It's as high as I will go regardless of what it is that I am rating as nothing is ever perfect-there is always room for improvement. So 8 is tops for me.

That's not to say you should get one. The decision is yours alone. We all have different reasons for the purchase of a scanner. Is it a toy? Do I need all the features? Etc... There are a million considerations that can go into a purchase and none of us explore more that 5 or 10 maximum.

One observation... If you have been waiting out Uniden's trials and tribulations over the various issues they encounter, I wonder if you have been able to observe the scanner in action, maybe a friend has one. If you have, you won't notice anything different should you pull the trigger and buy your own. The basic scanner has always "worked".

Good luck

Bill

One other point... I get fluky results some times when I use the Butel ARC Software to build my FL's. Sometimes when I "write" to the scanner, I find my settings will change. System that were avoided before are no longer avoided. and using the same FL, writing to my other 536 shows no problem so I try writing again to the first 536 and do it using the SAME FL without a problem. Submitting to Butel in the past only seems to work if you accompany your error findings with a solution. I guess they are working on bigger problems. So I have stopped submitting.

Ron,

I've had two 536's and one 436 since they were introduced. I use the Butel ARC Software religiously. My current observations of the radio rate it on a scale of 1-10 @ 8. I had rated it at 4 while waiting for Uniden to work out the dongle... Which was never done to the original advertised expectations. But close enough I guess. All other issues have corrective actions identified so it is now an 8 in my book. It's as high as I will go regardless of what it is that I am rating as nothing is ever perfect-there is always room for improvement. So 8 is tops for me.

Nicely worded and good advise, seems to me.

I joined this group some time ago because I am another
scanner enthusiast (from way back before scanners)
who is just waiting to hear good news about the
BCD536HP before I commit to one.

With all the questions, concerns, and problems expressed
on this group over time, I am not ready to purchase.

I expect that those who have mastered the 536 to their
satisfaction may not post here much which may (?) leave a
higher proportion of less satisfied posters.

Since I live in a somewhat rural area in Northern California,
there are few local trunking systems and few digital systems.

I do hear all kinds of “digital stuff” further out from me
and have good distance reception due to my location.
It would be fun to be able to listen to some of them.

I can stay pretty busy and fairly occupied just listening
to analog systems. Even so, I would like to have the
536 capabilities at my disposal – at some point.

The 996P2 is a highly dependable scanner. I have the older 996 and it plays very well. But the Phase II version is a definite "must have" when buying a new scanner. This applies to Motorola P25 systems currently in use. That's because the type of upgrade is backwards compatible with their current systems, making the newer Phase II upgrade very attractive from a cost standpoint. The cost can be budgeted over more than one year which can allow the municipalities to forgo bonding issues if they choose, buying gear as it becomes affordable within a yearly budget. The new Phase II equipment can be added to their existing system, allowing both old and new gear to communicate with each other. The services can upgrade in such a manner where the cost is more manageable... Instead of buying a complete new comm system they purchase first the new repeater(s) and then the radios. Depending on how much they spend in any budget year determines how fast they complete the upgrade. It's definitely an easier "sell" when the services need to approach the finance boards of their respective towns, cities or states.

From: Jim Stein
Topic: 2530 Message: 2530

I have just seen the announcement that Uniden has added EDACS capability for the BCH536HP - at an upgrade cost of $50.
This sends me a message - Uniden has been deploying their limited resources to develop a revenue producing upgrade at the same time they continue to procrastinate with completing work on capabilities they promised over two years ago. the most egregious of these, in my opinion, is the Siren App for Android. It took well over a year for them to get the Apple version published and now it has been another 10 months of so with no word on where the Android App is.
To me it proves that they would rather make a few bucks working on something new than deliver what we have long since paid for.
Bad message to customers!

That's not exactly correct. The x36 series has always had EDACS
capability with ESK support. This update (Free) adds EA systems to that.

The paid option is only for ProVoice decoding. It's paid because it must
be licensed from Harris Corporation.

I suggest that you read the announcement again. It is not EDACS, it is
a mode of EDACS not usually available on scanners called ProVoice, which
is a proprietary protocol, meaning that Uniden has to pay a licensing fee.

If you don't need ProVoice, don't buy it and your scanner will still let
you hear most of what is out there (not DMR, no dStar but most).

Jim,

Look at it this way...

Since Pro Voice isn't widely used (check out the USA coverage map that Upman supplies), it's a wonder it was even offered at all. It's definitely NOT about to make any real money considering the few who would benefits from it. My guess is that the ability to provide it was literally staring them in their face from a technical standpoint. And with the only drawback being the copyright license, they passed along the option should anyone care to avail themselves of it.

Now, that's not to say if Uniden offered a more widely and useful mode such as Phase II (which the X36's already have) I wouldn't agree with you. But they haven't done that yet.

I say "yet" because Mr. Opitz has stated the X36's will remain Uniden's flagship scanners for some time to come. Hopefully upgrades offering other modes are in the future.

Now, if Uniden would just notify me to return my 3 units for that damn clock thing and the dimming displays...☐
Bill

FWIW, I received and email early this morning with instructions and a label to return my 436 and one of my 536s for the RTC repair. I sent them off early this afternoon and expect it to be about two weeks door to door.

So, the 436 repair parts are in and people like you and me who have both scanners should be getting notified very quickly.

I'm still on the fence regarding the Pro Voice option.

The Pro Voice option is a no brainier for me as its not used where I live and either not used or used by services I don't care to listen to where I visit/vacation. And going forward, I wonder about the future of EDACS and LTR slowly going away?

Provoice is (hopefully) just the first in a series of paid add-ons for the Uniden flagship scanners. Did you ever stop to think that pay-per-feature Provoice might be just a proof-of-concept for Uniden?

Doubtful. They don't need any market studies to verify what they already know. It's (and I'm guessing again) probably just one of the easiest modes to bench test with the expectation of minimal bug fixes, provided to engineering as an acceptable offering should management care to exploit it. In this case they did.

This is the first paid digital format addition, so I agree with Bob that it MIGHT be a proof-of-concept testbed. As I've stated elsewhere, if I were doing that, I would start with the least-used format so any bumps in the road are not that large and they don't get overwhelmed.

Could you imagine the repercussions if they started with say DMR and there were issues? They had one bump which delayed the release this time. I'm sure they learned from that experience based on the posts made in other forums complaining that the release was delayed.

It will be interesting to see what happens.

While I would not put money on the bet more digital formats are coming, I certainly would not bet against it either.

Besides, Uniden needs all the positive PR it can get. The release of three new models (without any significant issues) still hasn't restored their reputation from the x36 delays. I suspect this will go a long way toward re-establishing Uniden as the clear leader in the field.

Good point Joe. It could very well be a proof of concept as Bob describes for the reason of less fixing per unit should something go wrong. But if that were their thinking why bother asking for trouble at all? Don't introduce anything, at least just not yet... Let the dust settle some more before additional offerings.

Good talk.

Bill

As UPMan has said on more than one occasion, there are additional licensing fees to DVSI and other companies for licensing of DMR and it's variations. That's if the "other companies" have an interest in licensing their technologies. While P25 and DMR are open standards, they are not open source. MotoTrbo is neither, nor would I suspect is NXDN.

2543. Programming issue

Yahoo group: BCD536HP
Date: 2015-12-05 11:12:24 UTC
From: N1CHU
Topic: 2543 Message: 2543

This has occurred on more than one occasion...

When programming my BCD536HP using Butel ARC software I have experienced the dropping of a piece of the intended programming. What I did was choose one of my FL's and load it into the ARC program. I then added another FL to the first FL and saved it as part of the first FL. The second FL was now part of my first FL. I then wrote to my 436 without issue. Both FL's were now listed under the first. I then wrote the SAME combined FL to my 536. But the 536 did not get the added FL, only the first... I again attempted to write the FL that took in my 436. Still no joy.

My question is has anyone else experienced this behavior? I haven't much faith in the ARC software at this point, as my suspicion lies with this software as the cause. But before I post to any ARC newsgroups I thought I'd post here in an effort to learn of how widespread this may be. And further, determine if others are experiencing this that do not use ARC software.

Bill

Joe,

ARC lets you load one FL at a time, yes. But it also allows for the adding to the FL already in play. If you were to first load a FL and then try to load another without first clicking on "Add Another HPD File" (which is found under "File"), the loaded FL goes away and the new FL takes its place. So you are correct as far as that goes. But I loaded a second FL and added it to the first by using the Add Another HPD File. Now, both FL's are resident. Then I saved them both under the name of the first FL. (I now could eliminate that added FL because it's now part of the first.)

From: MCH
Topic: 2551 Message: 2552

The Mini end connects to the front of the scanner. The regular USB end
connects to your laptop. If your laptop does not have USB connectors,
you will have to buy an adapter to add one.

The Mini end connects to the front of the scanner. The regular USB end connects to your laptop. If your laptop does not have USB connectors, you will have to buy an adapter to add one.

He's trying to reverse the cable, plugging the computer connector into the back of the scanner, leaving him with a mini USB connector that doesn't match anything on the laptop. Maybe your instruction about looking on the FRONT of the scanner for the mini USB connection will help. Or maybe, just maybe, read the manual?

2555. Firmware release notes?

Yahoo group: BCD536HP
Date: 2015-12-07 22:59:47 UTC
From: kd4ehn@...
Topic: 2555 Message: 2555

I can't seem to find any release notes for the various firmware updates for the BCD536HP. They don't seem to be on the Uniden page for the scanner, and searching for "firmware AND BCD536HP"on the site yields no results. I'm just curious about fixes and new features added by the several updates I have loaded since I had the scanner. Can anyone point me to the right place? Thanks!

You can get a more comprehensive listing by going to the database page (http://www.radioreference.com/apps/db) and selecting the report at the bottom of the page (you must be a premium user).
The major systems are highlighted in the map on this page: ProVoice < UnidenMan4 < TWiki
| |
| | | | | | | |
| ProVoice < UnidenMan4 < TWikiProvoice Scanning is Here! Uniden caps another first in scanner technology by being the first and only scanner manufacturer to add the ability to scan and monitor... |
| |
| View on info.uniden.com | Preview by Yahoo |
| |
| |

I did not include systems with no known talk groups or those that were fully encrypted (according to RRDB), so if anything it under-represents the totality of systems out there.

From: Mike * Washburn
Topic: 2555 Message: 2560

I was surprised to see that the test remote control software (also on the firmware update page) also runs on linux (mint), but that may be because I've installed mono .net development Ide. I've got a python script that pings and looks at the web server wget response on port 80 to get the DHCP IP address (recieves a 'UG375Z top page' but nothing else)

Pleasantly surprised, anyway as linux wasn't mentioned afaik. Haven't found how to switch which lists to monitor yet though. Looks promising.

Also haven't looked to see if you can set a static IP in recent frmwares.

Alabama First Responder Network is P25 Phase II, mostly encrypted. At least in Baldwin County it's mostly encrypted. Mobile City and County will be going to the same system at some point, but no one is quite sure when.

Hopefully they'll still be on Pro Voice next spring when I get down there next.

The City of Mobile has been using the Harris Radios for over a year and are encrypted.
The County and other Municipalities within the County are just about through replacing their OLD Motorola EDACS Radios.
I hear them testing the radios from Hurricane electronics and everything should go quite on your scanners within a couple of months.

If you are adding the connector, I always use the tip
for the discriminator and the ring for the ground.

If it's a 3-conductor, leave the sleeve unconnected.

Has anyone heard any news recently about the Siren app for Android? At this point I'm beginning to wonder if Uniden really is working on it. It seems like we would have at least seen a beta or even an alpha version by now or heard something about the ongoing development. The promised Siren App was a big factor in my decision to purchase the BCD535HP two and a half years ago and I'm still waiting. I don't mean to complain, I'm just wondering where Uniden is with it at this point. Maybe Paul or someone can give us an update.

My apologies, Evan. I had the ring and sleeve mixed up. I use the tip
and Sleeve for my connections.

The tip is always the end of the connector farthest away from the wire.
The Sleeve is always the end of the connector closest to the wire.

The Ring is always between the tip and the Sleeve, and may be any number
from 0 to 3 or more.

See here for an image showing 0, 1, and 2 Rings:

Topic: 2564 Message: 2572

based on amazon's pic, can you tell which one that should be? I"m hoping
what you said makes sense to my friend / coworker... greek to me :)

You only need two conductors, but having extra won't matter, so whatever
he has to use will be fine. I'm assuming you were asking which connector
you need.

It was, but they have a version for iOS. They only said that
an Android version was coming. Still, the Siren app is free.
That was my point about complaints people paid for it.
Sentinel is free, too, FWIW.

Joe M.

From: Evan Platt
Topic: 2007 Message: 2578

Well if it was advertised as being available or 'coming soon', the OP has a point. He did sort of pay for it.

If you bought a car that was advertised as having power seats, but the seats weren't working due to a bug or not being available yet, you'd be pretty pissed off if almost 2 years later you still didn't have power seats..

Ok - I'll tell him that, I think the confusion was what is 1,2 and 3 on the adapter, but I think he said he can trace that out.

Topic: 2007 Message: 2580

I understand, and agree to a point. Maybe if the complaint was that they didn't get something they "sort of paid for", I might agree.

While there are many issues that are justified to complain about, I don't see that as one of the bigger ones, as they said it wasn't available yet. One thing that helps is that UPMan has an Android phone, so it's not like he doesn't have motivation to see it. Maybe Uniden told him to put that on the back burner since it's not going to make any money (specifically), and they have other expenses to worry about - like the repair campaigns.

On the car, if they said power seats were not yet available up front, it would be difficult to get ticked about it.

I thought I paid for a car that had paint that would not fall off. Turns out, I didn't and it does, and Ford won't fix it.

"on the adapter"??? Which adapter are you talking about?

Is he installing another jack for the tap or modifying an existing audio
jack?

So he says...

i connected the test point to the tip. the sleeve should (?) be grounded already by the case. The ring is unconnected.

Does that sound right? We didn't use a resister as the page says it wasn't needed...

From: MCH
Topic: 2564 Message: 2583

Depending on the connector itself, the sleeve likely is not connected to Ground. If that is the case, tell him to run a wire to ground or maybe just build a solder bridge from the sleeve connection to the case or connector body.

I will also note that there are several ways to install the tap. Some people just run the tap right to the tap point, some use a 10K resistor in series, some use a capacitor in series, and some use both of those.

Joe M.

Sorry, maybe adapter isn't the right word... the audio jack I pointed the amazon link for. :)

Joe does that make the Wi-Fi dongle free that came with the scanner?

Michael

Nope.

That was hardware you paid for, but that has worked for over a year.

Where I draw the distinction is that anyone can get the Siren app
or the Sentinel at no cost, but you have to pay to get the dongle.

2587. Re: [BCD536HP] Siren App for Android

Yahoo group: BCD536HP
Date: 2015-12-18 20:13:49 UTC
From: N1CHU
Topic: 2007 Message: 2587

I am posting this as a question, it being the best I can do from how I remember the chronological listing of events.

I recall the original claim was to be able to to listen to your scanner anywhere in the world provided you could access the Internet, the Siren app allowing the use of a smartphone or tablet/iPad. The radio uses a WiFi dongle and connects to your existing wireless router wherever the radio called "home". I believe this has been accomplished (not referring to android) but not how it was originally imagined?

The Siren app was advertised as "included" with no mention of when it would become operational until just after the BCD536HP's release, when we were advised it would become operational within the first quarter. That did not happen due to unforeseen issues with third party dongle firmware not meeting Uniden's standards? I believe it was this dongle firmware the Siren app needed in order to work. And Uniden pushed back the date further and further in an attempt to capture the app's original, intended function.

As for paying for this feature (it was NOT an option), it was included in the price of the scanner. So, yes ANYONE who purchased the scanner was paying for it as included. If I had an android phone and expected the use of this function, I'd be pissed too. There needs to be some sort of pacification for the non-inclusion of an "As Advertised" feature.

This last part is another question I have... That original intended function... Did Uniden capture it in its entirety? Or do we have the same capability but arrived at differently? (I am not referring to the android issue here, just the way Uniden got it to work with IOS.

Bill

I think there was originally planned a server that would allow easy
access anywhere in the world. That has yet to materialize. There are
workarounds, but they are not nearly as easy or elegant.

Joe,

I have a different slant on the Siren app. I see it as something necessary in order to get your iPhone to work with what the dongle was doing. Sentinel on the other hand, was/is the software that is not required but highly regarded when it came to programming your scanner, it sure beats manual programming. (It may also be a necessary item when it comes to updating data and firmware-can one acquire the database updates and the firmware upgrades in other ways?). My point is that one is an absolute necessity while the other not so much...

Bill

2590. Re: [BCD536HP] Siren App for Android

Yahoo group: BCD536HP
Date: 2015-12-18 21:35:13 UTC
From: Rick WA6NHC
Topic: 2007 Message: 2590

Do we have to open the whine cellar on this topic every 6 weeks?

It was advertised as listening capable on your devices. That is possible now on a computer, iOS AND Android device via other software. It is possible to broadcast it across the Internet as well but that requires a computer if you want multicast. Because the scanner (because of CPU load) can only feed ONE audio source at a time, so a computer makes it simpler if you want more than one listener.

How? Use VLC (as one example, available on numerous platforms including *nix which should work on Mac) to get the audio via the wifi dongle (or a feed into your sound card) and rebroadcast it through your LAN and/or the Internet. It involves a little nerd work for firewall management and some understanding of the software, but it's doable NOW (audio only).

Because of that limitation (one audio listener) I don't expect that the device will ever reach broadcast numbers. While it's nice, it hasn't proved to me at least, to be important (I just add more scanners). If I want to listen remotely, I use the Uniden supplied audio app on my computer, then remote the entire computer to my device, that audio comes with the remote control. I can even do coarse scanner control like adding/dropping groups (via quick key).

So the bottom line is: Yes, Uniden is late on a OS specific feature for Android. Does it matter? Not really, using VLC on the Android is uber simple (even my Nook HD+ can manage it and it's uber stupid). If you want full Internet access, that's doable with VLC or Siren on iOS (router port forwarding, specific firewall rules). If you want multicast, use VLC or another similar program designed for just that (like used on Broadcastify). All for <<gulp>> free. If you factor this feature into the cost of the scanner, you wouldn't save even pennies. The dongle works (yes, late but it works) so the rest falls on you the user until Uniden get the Android flavor to work. Wah!

Rather than whining, look for solutions. The answers are there unless you demand to be spoon fed.

Merry Christmas,
Rick wa6nhc

From: MCH
Topic: 2007 Message: 2591

There are alternatives to the iOS Siren app. You can also use the Windows app or I believe there are other programs you can use, too, such as ProScan and at least one free streaming program.

Also, you can live without Sentinel. Firmware updates are not always required, and you can program manually like you had to with older models. But, I generally agree that Sentinel is preferred when it comes to programming larger systems.

But, I respect your opinion on the Siren point of view, too.

Too bad Rick doesn't have the restraint to let others talk. If it bothers him that a newbie wants to rehash old issues so be it. And if others care to help by answering his questions, all the more power to the group. Somebody has got to get it through his head that groups such as these are nothing more than a big party line. There's a lot going on. Just pick and choose which you care to participate in... In a CONSTRUCTIVE manner. NOT in the belittling fashion you always seem to take. You take what you want and throw out what you don't. And stop stepping on others just because they aren't as Davy as you on the subject matter! Your sarcastic "Merry Christmas" says it all. I usually end with "Hope this helps". But in your case I really don't care.

Bill

2593. Re: [BCD536HP] Siren App for Android

Yahoo group: BCD536HP
Date: 2015-12-18 23:40:00 UTC
From: Rick WA6NHC
Topic: 2007 Message: 2593

Bill,

You're not a newbie, I've been reading your posts for quite a while now, here and elsewhere. And your response approach (an attack) is not uncommon for you.

What I was saying was that instead of reading the archives, like any newbie always should, the rest of us here waiting for useful information are once again forced to wade through another rehash and stale gripes, again. It's tiresome because they didn't do their homework (due diligence). After multiple emails I spoke up and now YOU'RE offended.

This members of this group (like many) fall into one (or two) of three categories. 1) passively waiting for information; 2) actively seeking ways around perceived issues and 3) griping about what they can't do right now without looking elsewhere. I'm in the first and second group, clearly, until the last group sends several messages of whining, again. So I spoke up hoping to trim it only to be attacked. Here are some other points to consider...

Most answers are in the archives. That's one thing that Yahoo groups does well, it remembers.
Griping does no good and does NOT speed things up.
Griping about something you can't change keeps others (new purchasers) away, which slows things even more because it limits the cash flow for Uniden (not that I'm concerned about that). More buyers makes more income justifying more engineers to write the code; a basic business fact (and it's in the archives).
READ the archives in ANY group that is joined, preferably before you join, so you know what you're getting into.

The TWO things (ok gripes) I see here is the same on many lists (some I moderate or admin too); no one bothers with the archives and griping won't speed things up but forces everyone else to rehash it, again and again... this horse has been flogged beyond dust, it's time to move on. Android Siren will appear when it appears.

As for me being constructive, I (and others) left basic information and suggestions for those willing to be more than an appliance operator to reach their goals instead of waiting for Siren on Android. I will NOT lead them by the hand, I don't have that amount of time if they don't have the interest to follow through. I've proven that other methods work, but it's not for everyone, there is no single way to get there and home LANs vary. Read, experiment, learn and play!

If you don't like Uniden, don't buy it. If you do buy it, be patient. This is their flagship scanner, quite capable as a scanner and they

won't be ignoring it. They'll get the Android version of Siren out when it is ready for release. In the meantime, pick one (or more) of the other ways to broadcast if that is your need.

And lastly, I do wish you a Merry Christmas, I'm NEVER snarky about that.

From: Steve Smith
Topic: 2007 Message: 2594

Bill is spot on with his comments(below). This is exactly the way the events unfolded. Over two years ago I saw Paul's video at https://youtu.be/zGPEEGw5NzE and I was very excited about his comments about the Siren app for the new BCD536HP. Listen to his comments starting at 15:40. At the time, I had a Uniden BCD996XT scanner that I was very happy with. But I REALLY wanted to be able to listen to the scanner on my Android tablet installed on the dash of my car. This new feature WAS THE ONLY reason I sold my 996 and bought the 536. So was I duped? I think I so. Now, I understand how delays can happen, but too much time has gone by and Uniden at least owes us an explanation and an update as to what the current status is of the Siren app for Android. Does it matter? Of course if matters and this is not whining. Do you get it Rick?

Steve Smith

Subject: Re: [BCD536HP] Siren App for Android

I am posting this as a question, it being the best I can do from how I remember the chronological listing of events.

I recall the original claim was to be able to listen to your scanner anywhere in the world provided you could access the Internet, the Siren app allowing the use of a smartphone or tablet/iPad. The radio uses a WiFi dongle and connects to your existing wireless router wherever the radio called "home". I believe this has been accomplished (not referring to android) but not how it was originally imagined?

The Siren app was advertised as "included" with no mention of when it would become operational until just after the BCD536HP's release, when we were advised it would become operational within the first quarter. That did not happen due to unforeseen issues with third party dongle firmware not meeting Uniden's standards? I believe it was this dongle firmware the Siren app needed in order to work. And Uniden pushed back the date further and further in an attempt to capture the app's original, intended function.

As for paying for this feature (it was NOT an option), it was included in the price of the scanner. So, yes ANYONE who purchased the scanner was paying for it as included. If I had an android phone and expected the use of this function, I'd be pissed too. There needs to be some sort of pacification for the non-inclusion of an "As Advertised" feature.

This last part is another question I have... That original intended function... Did Uniden capture it in its entirety? Or do we have the same capability but arrived at differently? (I am not referring to the android issue here, just the way Uniden got it to work with IOS.

For those this matters to, use VLC (free download and use on numerous platforms) for listening remotely to your scanner. It's simple to set up, works very well and will solve your immediate need.

It's even documented on the Uniden pages.

Rick

Your opinion matters. But only to yourself. That's because nobody else cares to bother with your ranting. Nobody bothers reading your psycho babble or analysis of how many different types of people submit to the group or which are acceptable in your small mind. As I said, I don't give a rats ass what you think of me or what you say. Mostly, I just ignore you. I overlooked who sent your last tirade, normally, I see its from you and delete without reading. But every once and a while you need someone to rattle your chain-I will apologize for that. You really are too easy to get to and I am ashamed I take advantage. I will stop now and delete your further posts without reading.

On Dec 18, 2015, at 6:40 PM, Rick WA6NHC wa6nhc@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Bill,

You're not a newbie, I've been reading your posts for quite a while now, here and elsewhere. And your response approach (an attack) is not uncommon for you.

What I was saying was that instead of reading the archives, like any newbie always should, the rest of us here waiting for useful information are once again forced to wade through another rehash and stale gripes, again. It's tiresome because they didn't do their homework (due diligence). After multiple emails I spoke up and now YOU'RE offended.

This members of this group (like many) fall into one (or two) of three categories. 1) passively waiting for information; 2) actively seeking ways around perceived issues and 3) griping about what they can't do right now without looking elsewhere. I'm in the first and second group, clearly, until the last group sends several messages of whining, again. So I spoke up hoping to trim it only to be attacked. Here are some other points to consider...

Most answers are in the archives. That's one thing that Yahoo groups does well, it remembers.
Griping does no good and does NOT speed things up.
Griping about something you can't change keeps others (new purchasers) away, which slows things even more because it limits the cash flow for Uniden (not that I'm concerned about that). More buyers makes more income justifying more engineers to write the code; a basic business fact (and it's in the archives).
READ the archives in ANY group that is joined, preferably before you join, so you know what you're getting into.

The TWO things (ok gripes) I see here is the same on many lists (some I moderate or admin too); no one bothers with the archives and griping won't speed things up but forces everyone else to rehash it, again and again... this horse has been flogged beyond dust, it's time to move on. Android Siren will appear when it appears.

As for me being constructive, I (and others) left basic information and suggestions for those willing to be more than an appliance operator to reach their goals instead of waiting for Siren on Android. I will NOT lead them by the hand, I don't have that amount of time if they don't have the interest to follow through. I've proven that other methods work, but

it's not for everyone, there is no single way to get there and home LANs vary. Read, experiment, learn and play!

If you don't like Uniden, don't buy it. If you do buy it, be patient. This is their flagship scanner, quite capable as a scanner and they won't be ignoring it. They'll get the Android version of Siren out when it is ready for release. In the meantime, pick one (or more) of the other ways to broadcast if that is your need.

And lastly, I do wish you a Merry Christmas, I'm NEVER snarky about that.

Just a reminder that flames are not allowed on this list.

I did allow this thread to continue because there are valid
complaints to be aired (including those I may not personally agree
with). That does not mean I will condone any personal attacks.

If you wish to continue to discuss the Siren Android issue, or related
shortcomings, please keep personal negative comments out of it.

In short, keep it respectful. This is, I believe, the first time in
years I've had to send this reminder, and that is a credit to the list
members. I knew there would be strong opinions on both sides, but flames
will not be allowed to continue.

Also note that while I quoted a specific message, it is not
the only one involved. This is not only directed to "CHU".

From: Jim Stein
Topic: 2007 Message: 2598

"If you do buy it, be patient" Do you suggest that this should be Uniden's new sales slogan? Just like Ford might say: "Buy your Explorer today and we'll send you the 4th tire later - maybe 2 years later - perhaps even later - we might let you know someday what to expect"?
I do agree that the 536HP is a great scanner. I do love it. I won't be asking for my money back. I'll even probably buy another Uniden someday. I don't agree, though, that we are obligated to wait silently and endlessly for what they promised or that we are at fault for not being bright enough to find a work-around.
I don't think that I even rise to the level of newbie (even having owned Unidens for 25+ years) so ignore my ignorance but I'm having difficulty understanding why it is so wrong to ask why I can't simply go to Google Play and download Siren just as the iOS people have been doing for months.
'Nuff said on this - and a very sincere Happy Holidays to all!
Jim

Understood. And if you nipped it in the bud as an administrator the thread would never have materialized. It was inflammatory, deserving of a rebuttal. I did not start this flame and was not going to sit by and let the integrity of the group suffer. I had enough of the bad attitude which was directed at a newer scanner owner, which I and others were helping and simply told the offender in no uncertain terms it was improper-something an administrator should have done but didn't. Checking my history shows in most cases I try to help, regardless of the questions. We don't need someone flaming anyone because a question was asked prior.

Bill,

You're not a newbie, I've been reading your posts for quite a while now, here and elsewhere. And your response approach (an attack) is not uncommon for you.

What I was saying was that instead of reading the archives, like any newbie always should, the rest of us here waiting for useful information are once again forced to wade through another rehash and stale gripes, again. It's tiresome because they didn't do their homework (due diligence). After multiple emails I spoke up and now YOU'RE offended.

This members of this group (like many) fall into one (or two) of three categories. 1) passively waiting for information; 2) actively seeking ways around perceived issues and 3) griping about what they can't do right now without looking elsewhere. I'm in the first and second group, clearly, until the last group sends several messages of whining, again. So I spoke up hoping to trim it only to be attacked. Here are some other points to consider...

Most answers are in the archives. That's one thing that Yahoo groups does well, it remembers.
Griping does no good and does NOT speed things up.
Griping about something you can't change keeps others (new purchasers) away, which slows things even more because it limits the cash flow for Uniden (not that I'm concerned about that). More buyers makes more income justifying more engineers to write the code; a basic business fact (and it's in the archives).
READ the archives in ANY group that is joined, preferably before you join, so you know what you're getting into.

The TWO things (ok gripes) I see here is the same on many lists (some I moderate or admin too); no one bothers with the archives and griping won't speed things up but forces everyone else to rehash it, again and again... this horse has been flogged beyond dust, it's time to move on. Android Siren will appear when it appears.

As for me being constructive, I (and others) left basic information and suggestions for those willing to be more than an appliance operator to reach their goals instead of waiting for Siren on Android. I will NOT lead them by the hand, I don't have that amount of time if they don't have the interest to follow through. I've proven that other methods work, but it's not for everyone, there is no single way to get there and home LANs vary. Read, experiment, learn and play!

If you don't like Uniden, don't buy it. If you do buy it, be patient. This is their flagship scanner, quite capable as a scanner and they won't be ignoring it. They'll get the Android version of Siren out when it is ready for release. In the meantime, pick one (or more) of the other ways to broadcast if that is your need.

And lastly, I do wish you a Merry Christmas, I'm NEVER snarky about that.

From: James F. Boehner MD
Topic: 2601 Message: 2601

Yes, This message is being cross-posted to both of the BCD-x36HP groups, as it deals with both scanners.

I used the Uniden Repair Program https://www.uniden.com/product-information/bcdx36hp-repair-campaign for the clock problem on both of my scanners, the 436 and 536.

Additionally, I requested repair of the display and headphone jack problems on my 536.

I received both scanners back yesterday, and both are functioning well, with successful repairs.

My thanks to Uniden, and especially to Paul Opitz (UPMan) for his presence on these lists!

I received my 436 and 536 back yesterday, too. The 536 works fine. The 436 came back without the internal SD card. Now, I have to get with Uniden to figure out what they will do for me.

Maybe they'll give you a gift certificate for reading comprehension classes. The instructions for both scanners quite clearly stated not to send anything but the scanner back.

Ouch...

I caught that too but didn't want to be the one to tell him. Reading comprehension classes? Good one. But a new SD card would be cheaper!

As long as we are on the subject of SD cards... Do the Uniden scanners work without the SD cards? I never tried turning on and letting the scanner boot up and then pulling the SD card. I don't imagine it's recommended. Maybe there is on-board memory chips that store current data? I have a portable ham radio that uses both on-board memory chips and an SD card and will perform without the SD card...

Short answer: No it won't work without the card. The firmware is
stored there (for a time at least) and all the programming, including
the full database is stored there.

I believe that they will power on, but that's not the same as working.
They will not function as designed without a programmed SD card inserted.

I think that the files for updating the firmware are loaded on to the
card and then are extracted and loaded onto the scanner itself. Which is
why a SD card has to be in the scanner during the upgrade. Once the
firmware is updated, the data on the card is no longer needed. At least
that's my understanding.

That's my understanding as well. The SD card is used to transport the firmware to the scanner where it is written then usually deleted from the SD card.

And as was stated here (I think) you can even remove the card, then use a card reader to perform the firmware update, then put the card in the scanner and it will complete the process.

And +1 on the unit powering up, but not operating without the card. It's akin to removing the HD from a PC then powering it up. It will work, but only in a basic fashion.

During power-up, the scanner reads from the SD card to obtain the database segments in-range and the favorites list(s). Even after initially loading the database, changing the programmed location or range will request a new copy of the database segments nearby. Without the card it will have nothing to load and therefor will NOT work.

More cost effective for Uniden, maybe.

But, as the repair costs you nothing, it's the same difference.

That said, I would love to see the GPS time supported.

2613. Uniden repairs question...

Yahoo group: BCD536HP
Date: 2016-01-13 18:23:02 UTC
From: Michael Lynch
Topic: 2613 Message: 2613

I sent in both my BCD536HP desktop and BCD436HP handheld scanners for the Uniden repair. Like everyone else, I was having problems with the battery clock/time issue. Although I did not notice anything wrong (I have nothing to compare it to) I took the advantage and placed a note on each unit asking Uniden to inspect both of them for the screen dimming issue (this was indicated in an earlier email from Uniden if you wanted them to inspect the screen).

I received both of my units today. There is nothing in the enclosed paperwork, or in any emails that I received, stating that they looked at the screens for the dimming issue. I would like to know if it was done, and if they found a problem, made repairs, or did not find any problems at all.

UpMan? Are you out there?

Many thanks to Uniden for providing this service. I can't wait to try them both out.

Mike Lynch,

The "no paperwork" thing is typical from Uniden. Previous returns/repairs never had any repair paperwork telling me what was done. But that's just Uniden. So your case is not unusual and raises no red flags in my mind.

Hope this helps,

Bill

Well, I feel I must respond to this situation by telling you that I had a no power issue the latter part of last year and called them. i was told how to get a form online to fill out and send with the unit to Texas. I filled the form out and sent it the way they asked.When they received it they let me know it was in the line for repair and gave me a SRO # and said I could check online for the status of the repair and when it was done, they would send it back, which they did. They replaced and loaded the SD card and did something with the brightness of the screen and it's way brighter than before. They loaded any updates that were available and it made it back here just under three weeks. I am sorry to hear that all these others are having such problems, hope it gets better for you. They did list all things done on the return paperwork. Sorry you all are having these issues. This unit was a 536.

What does the paperwork actually say? For the 536HP, if there is a reference to replacing D415-418 (I think those are the numbers, that means that the display LEDs were replaced. For the 536HP, the RTC clocked is noted as "RTC Modification" and for the 436HP it's noted as "Control Board Modification".

UpMan,

The D numbers are LEDs. That makes sense. Thanks for the info.

Don't need it. Someone over on RR took his apart to look at the display
to see if he could figure out a fix. He shared pictures and part numbers. ;)

There is still a law on the books in the state of Connecticut that states a manufacturer must provide a schematic. But it dates way back when commercial AM radios were first marketed... No repair shops yet so the legislature figured it was up to the owner to make his own repairs. I don't know if warranties were in effect where you could return the radios for repair. Doubtful if it is enforceable anymore.

I suspect that would fall under Federal Preemption. A state
cannot require something the Federal Government prohibits.

I disagree Joe but that's another topic. Realistically, as you state, federal preemption is a requirement. I did start a post and when finished, I went back to check it for spelling errors, realized how long it was with my listing examples, etc., and deleted it. It just got too far off topic. Be glad to take it offline from the group if there is interest. I will say this... The Federal Government has one primary purpose, to serve the states. It derives its authority from the states. Of the people, for the people, buy the people. And yes, preemption is a necessary evil. It just goes against the original intended purpose of the federal govt creation. Which was a clearinghouse for all concerns that affect more than one state.

Upman posted the repair record, which is online. But I think we are missing the point here... Which is this... The repair record of what was done to that unit should accompany that unit when returned as a matter of routine. It's not like they don't record that info, it's there online as explained by Upman. Or, automatically send an email to the owner when repairs are completed that includes the repair record.

I got a copy of the repair record when my scanners came back to me. The
OP mentions that he did get paperwork, just that it didn't specify
exactly what the repair was. Actually it did, but you needed to know
what D415-418 were for.

2629. Re: [BCD536HP] Uniden repairs question...

Yahoo group: BCD536HP
Date: 2016-01-14 02:37:05 UTC
From: MCH
Topic: 2613 Message: 2629

UPMan can address this much better than I, but back after the revised ECPA came out, the scanner industry was directed by the FCC to withhold any information that would enable users to modify scanners so as to violate the ECPA. Part of that included withholding schematics from the general public.

As many of you surely recall, the schematics used to be provided BY the FCC as part of the Type Acceptance documents for public download. You will notice those are no longer published.

Anyway, that's it in a nutshell.

2630. EDACS ProVoice trunked scanner

Yahoo group: BCD536HP
Date: 2016-01-14 02:38:58 UTC
From: Iden
Topic: 2613 Message: 2630

Uniden Engineers Another First-to-Market Feature in Radio Scanner Technology
Ability to scan and monitor EDACS ProVoice trunked systems now available

IRVING, Texas, Jan. 13, 2016 /PRNewswire/ -- Uniden America Corporation announced today another breakthrough in scanner technology. Uniden has been a development leader in radio scanner engineering and is the only scanner manufacturer offering the ability to scan and monitor EDACS ProVoice trunked radio systems. This unique feature is available in Uniden's flagship BCD436HP and BCD536HP scanners.

ProVoice systems currently cover more than six percent of the U.S. and Canadian population in several major markets, which is more than 20 million people. Before this revolutionary addition to Uniden's scanners, the public has been virtually shut out from monitoring these public safety radio systems. This enhancement provides inexpensive direct access for the media, local agencies and the public, so everyone can be better informed and prepared.

2633. Re: [BCD536HP] Uniden repairs question...

Yahoo group: BCD536HP
Date: 2016-01-14 09:38:06 UTC
From: N1CHU
Topic: 2613 Message: 2633

I never got even that. But it's a minor point if you can put your hands on the info if needed. I have the first of two 536's and a 436 coming back to me today from the repair program. I will see what I see! I didn't mention the display dimming issue but the 536 suffers from it. Hoping Uniden included looking at that issue along with the clock issue without needing to mention it.

Bill

On Jan 13, 2016, at 8:19 PM, Gary Saffer ghs159@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

I got a copy of the repair record when my scanners came back to me. The
OP mentions that he did get paperwork, just that it didn't specify
exactly what the repair was. Actually it did, but you needed to know
what D415-418 were for.

On 1/13/2016 19:58, N1CHU n1chu@... [BCD536HP] wrote:
> Upman posted the repair record, which is online. But I think we are missing the point here... Which is this... The repair record of what was done to that unit should accompany that unit when returned as a matter of routine. It's not like they don't record that info, it's there online as explained by Upman. Or, automatically send an email to the owner when repairs are completed that includes the repair record.

From: N1CHU
Topic: 2613 Message: 2634

Wondering if this is a $50 upgrade that is handled by a firmware/software change or does the scanner need to go back to Uniden?

Uniden Engineers Another First-to-Market Feature in Radio Scanner Technology
Ability to scan and monitor EDACS ProVoice trunked systems now available

IRVING, Texas, Jan. 13, 2016 /PRNewswire/ -- Uniden America Corporation announced today another breakthrough in scanner technology. Uniden has been a development leader in radio scanner engineering and is the only scanner manufacturer offering the ability to scan and monitor EDACS ProVoice trunked radio systems. This unique feature is available in Uniden's flagship BCD436HP and BCD536HP scanners.

ProVoice systems currently cover more than six percent of the U.S. and Canadian population in several major markets, which is more than 20 million people. Before this revolutionary addition to Uniden's scanners, the public has been virtually shut out from monitoring these public safety radio systems. This enhancement provides inexpensive direct access for the media, local agencies and the public, so everyone can be better informed and prepared.

Subject: Re: [BCD536HP] Uniden repairs question...

UPMan can address this much better than I, but back after the revised
ECPA came out, the scanner industry was directed by the FCC to withhold
any information that would enable users to modify scanners so as to
violate the ECPA. Part of that included withholding schematics from the
general public.

As many of you surely recall, the schematics used to be provided BY the
FCC as part of the Type Acceptance documents for public download. You
will notice those are no longer published.

Anyway, that's it in a nutshell.

I used to live there for a long time but not in some years. As far as I know, there is a list available on Radioreference.com I have not visited the site in a while but what was available to monitor was on there somewhere.

    Uniden Engineers Another First-to-Market Feature in Radio Scanner Technology Ability to scan and monitor EDACS ProVoice trunked systems now available IRVING, Texas, Jan. 13, 2016 /PRNewswire/ -- Uniden America Corporation announced today another breakthrough in scanner technology. Uniden has been a development leader in radio scanner engineering and is the only scanner manufacturer offering the ability to scan and monitor EDACS ProVoice trunked radio systems. This unique feature is available in Uniden's flagship BCD436HP and BCD536HP scanners. ProVoice systems currently cover more than six percent of the U.S. and Canadian population in several major markets, which is more than 20 million people. Before this revolutionary addition to Uniden's scanners, the public has been virtually shut out from monitoring these public safety radio systems. This enhancement provides inexpensive direct access for the media, local agencies and the public, so everyone can be better informed and prepared. Simply a firmware upgrade and a software key that you put in from the menu
on the scanner. I did my 4/536 and it was easy as pie.

2649. Caveat! Factory Store, BEWARE!

Yahoo group: BCD536HP
Date: 2016-01-14 16:45:15 UTC
From: Rick WA6NHC
Topic: 2649 Message: 2649

I ordered two BWZG1844001 GPS cables for the x36HP scanners so I wouldn't have to move more stuff around. The Factory Outlet showed (still do) as IN STOCK. The credit card was charged the day of the order (regardless of what the 'sales agent', who barely read the script in English, said). There was supposed to be an email to advise about shipping with a promised delivery of 2-5 days. I got nothing except confirmation of the order.

I called this morning. After a lovely discussion ("I am xxx and helping you today I will be") they are back ordered until March so the web page is (still) in error. I canceled the order, hoping now that the charge will be reversed. I'll either find some elsewhere or figure out the connector is and make my own (it's just a serial cable, not rocket science plus I can decide what the wire length will be).

No stars awarded here, total failure of the customer sales service. The first cable I ordered from Uniden directly last year and they dawdled around, but at least they got it to me.

I'm a fan of the company but rate this UNacceptable. An email of the status should have been forthcoming, the web page should be accurate and don't charge a credit card until the actual sale is made. Shame on you Uniden.

UpMan, if you're watching, this is costing the company... sales is good, repeat sales is better, word of mouth is EVERYTHING and is what gets the repeat sales.

Rick WA6NHC

From: Rick WA6NHC
Topic: 2649 Message: 2653

Ok, my bad but it's still a place to avoid. I've not gotten a
cancellation confirmation email so I get to play the credit card games.

Thank you!

Rick

Subject: [BCD536HP] Caveat! Factory Store, BEWARE!

I ordered two BWZG1844001 GPS cables for the x36HP scanners so I wouldn't have to move more stuff around. The Factory Outlet showed (still do) as IN STOCK. The credit card was charged the day of the order (regardless of what the 'sales agent', who barely read the script in English, said). There was supposed to be an email to advise about shipping with a promised delivery of 2-5 days. I got nothing except confirmation of the order.

I called this morning. After a lovely discussion ("I am xxx and helping you today I will be") they are back ordered until March so the web page is (still) in error. I canceled the order, hoping now that the charge will be reversed. I'll either find some elsewhere or figure out the connector is and make my own (it's just a serial cable, not rocket science plus I can decide what the wire length will be).

No stars awarded here, total failure of the customer sales service. The first cable I ordered from Uniden directly last year and they dawdled around, but at least they got it to me.

I'm a fan of the company but rate this UNacceptable. An email of the status should have been forthcoming, the web page should be accurate and don't charge a credit card until the actual sale is made. Shame on you Uniden.

UpMan, if you're watching, this is costing the company... sales is good, repeat sales is better, word of mouth is EVERYTHING and is what gets the repeat sales.

Again, my bad. Apologies of course.

Avoid this store...

I'm waiting for the (official) Uniden back order to be available via Amazon as a back up plan if I can't find the connectors.

We should close this thread now, everyone is warned.

Rick,

This is how I surmise the online ordering process works;

The email you received confirming the order is automatically generated once payment method is verified The promised "shipping" notice you did NOT get is also automatically generated once product availability has been determined. If the product is in stock, the email reads one way (ex: your item has shipped). If it's out of stock it will read another way (ex: item is out of stock and has been back ordered). There is usually a period of time between the two which could be a day or two depending on the time of day the order was placed-orders received early in the day have a better chance of being processed that day or the next. And I suspect Uniden's ordering system (computer software) will be sending out the "on back order" notice soon. As for the online store not being up to date, showing the part IS in stock when it isn't, I suspect their IT department is thankful for your pointing this out. Just like any large store, there is a listing of inventory complete with a "counter". That counter tells them how many items are left. Each time an item is sold the computer program subtracts one item from its inventory. It generates a "get more stock order" when inventory gets low. Either Uniden is using incorrect data or the system needs tweaking-because it should be accurate. It's not in a lot of cases. I found two items on the shelf at Lowes Building Supply. I needed 6. I asked the counter help to check inventory and they told me they were out of stock and also that I was lucky to find the two I had because their records didn't even show those two! A prime example and validation of the adage "computers don't make mistakes, people do! I'll throw my other favorite one in also 'cause I like it so much, it has to do with data input...Garbage in, Garbage out.

Bill

That's not a Uniden Corporate website. From the disclaimer at the bottom of the page:
"Please note that FactoryOutletStore.com does not in any manner allege any affiliation between the manufacturers and our corporation."

Nothing UPMan can do about a company he has no connection with.

There is one Pro Voice system in eastern MA and it's a transit system,
not public safety. Like you, I mostly got PV for when I'm in areas where
it is used.

I will say, that listening to transit system operations is
interesting... an a bit scary at times.

The only EDACS system in CT that I know of is Hartford. That's analog,
as is the soon to be replaced EDACS system in Worcester, MA.

It's sort of a shame that EDACS is going end of life, but it is ancient
in technology terms. I always thought of it as equivalent to Motorola
Type I trunking and I don't now of any of those systems that are still
operational.

... and so my post should have included "REGARDLESS OF OUTLET", this is usually how the online ordering process works. Glad to hear it's not Uniden.

UPS just dropped off my 436 and 536, back home from the repair campaign AND the RAVPOWER 26800mAh External Battery Pack. I plugged it into the 436 and it works! Next step is to give it a full charge and learn how long it will power the 436 while listening to the NWS at 1/4 volume level. The air shows I attend are usually very busy with radio chatter (multiple agencies). And I wear headphones... I figure 1/4 volume setting is about right for feeding the headset. No more shelling out for the Energizer Lithium-ion desposables! It will take about one air show season to pay for itself.

Bill

From: N1CHU
Topic: 2613 Message: 2664

An interesting footnote to the EDACS PRO VOICE option posting that eluded to a cheaper way for new media to listen buy using the x36 products was when the City of Hartford got its EDACS trunked system years ago, the media was given or assigned portable radios programmed to receive only as there were no scanners that followed trunking yet. Of course that all changed.

The only EDACS system in CT that I know of is Hartford. That's analog,
as is the soon to be replaced EDACS system in Worcester, MA.

It's sort of a shame that EDACS is going end of life, but it is ancient
in technology terms. I always thought of it as equivalent to Motorola
Type I trunking and I don't now of any of those systems that are still
operational.

From: Rick WA6NHC
Topic: 2649 Message: 2667

I'm happy I was /_*wrong*_/, it isn't Uniden. In a private email, I was told of some being available elsewhere, so I ordered two cables at a higher cost, plus shipping. I should be good in a few days.

I got another 536 this week and THEN I noticed the brightness issue on the older one, so I'll add that to the repair request when I get the round TUIT (before fire season certainly). At least now there are enough around that I can 'borrow' the one for the RV to temporarily replace the one being fixed (have 436 too). They'll make laps during repair exchanges.

Is there any issue of the backlight on the NEW scanners or will the latest one (all updated before arrival except the PV firmware) have to be repaired as well?

Meanwhile, I'll get back to my newest toy, an SDR receiver (www.sdrplay.com) which is a significant time vacuum.

Thanks all, 73,
Rick wa6nhc

The newer 436s are starting to show with the new backlights. The serial number range is something like 580003900-ish (exact cutover unknown).

I haven't read anything on the 536 yet.

Of course, this assumes they use the serial number labels in order, too!

I wonder what it will cost us to get the new back lights on the 436. My unit from 2014 could use an improvement on the back light issue.I sent my 536 in for repair and they put in the new LED's for the 536, much nicer.

If the 436 has the issue, it doesn't cost anything (just like the 536).

You use the same procedure you did with your 536.

From: tom kosner
Topic: 2649 Message: 2671

So, you are saying to send it in to Uniden? The 436?

From: "MCH mch@... [BCD536HP]" <BCD536HP@yahoogroups.com>
To: BCD536HP@yahoogroups.com
Sent: Thursday, January 14, 2016 11:57 AM
Subject: Re: [BCD536HP] Caveat! Factory Store, BEWARE! Resolved!

  If the 436 has the issue, it doesn't cost anything (just like the 536).

You use the same procedure you did with your 536.

2673. Repair Campagn

Yahoo group: BCD536HP
Date: 2016-01-14 20:53:56 UTC
From: N1CHU
Topic: 2673 Message: 2673

In regards to what gets repaired when you send back a 536...

I returned mine for the clock issue, forgetting to attach a note regarding the display backlight issue... Mine looked like it was in need of repair. It was returned to me today with both issues corrected. The repair is obvious concerning the clock (set it and it stays set) and the paperwork listed diodes replaced that indicate the display lighting issue was also corrected... Without the need to include a note. I believe the diodes are listed as D414, D415, D416, D417, D418. I may have the part numbers wrong but they are sequential, 14 thru 18. And that's the indication the display lighting was repaired.

Bill

2674. Re: [BCD536HP] Caveat! Factory Store, BEWARE! Resolved!

From: Mike * Washburn
Topic: 2649 Message: 2674

Any one know if this repair is open to Canada as well?

It's asking for a zip address, so I wasn't sure.

Mike

2675. RE: [BCD536HP] EDACS ProVoice trunked scanner

Yahoo group: BCD536HP
Date: 2016-01-15 01:35:09 UTC
From: Kajj 1
Topic: 2613 Message: 2675

I KNOW HERE IN Mobile County, Al

That some agency is providing the 3 local television networks with Harris Provoice Police Radios.

You can hear them in the background and at times you can hear the alarm for a hold up.

How else would they be able to listen to comms…..

Sent: Thursday, January 14, 2016 1:04 PM
To: BCD536HP@yahoogroups.com
Subject: Re: [BCD536HP] EDACS ProVoice trunked scanner

I recall those days.. I wonder if agencies still do that..

On Thu, Jan 14, 2016 at 10:56 AM, N1CHU n1chu@comcast.net [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

An interesting footnote to the EDACS PRO VOICE option posting that eluded to a cheaper way for new media to listen buy using the x36 products was when the City of Hartford got its EDACS trunked system years ago, the media was given or assigned portable radios programmed to receive only as there were no scanners that followed trunking yet. Of course that all changed.

Bill

On Jan 14, 2016, at 12:59 PM, Gary Saffer ghs159@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

The only EDACS system in CT that I know of is Hartford. That's analog,
as is the soon to be replaced EDACS system in Worcester, MA.

It's sort of a shame that EDACS is going end of life, but it is ancient
in technology terms. I always thought of it as equivalent to Motorola
Type I trunking and I don't now of any of those systems that are still
operational.

> Uniden Engineers Another First-to-Market Feature in Radio Scanner Technology Ability to scan and monitor EDACS ProVoice trunked systems now available IRVING, Texas, Jan. 13, 2016 /PRNewswire/ -- Uniden America Corporation announced today another breakthrough in scanner technology. Uniden has been a development leader in radio scanner engineering and is the only scanner manufacturer offering the ability to scan and monitor EDACS ProVoice trunked radio systems. This unique feature is available in Uniden's flagship BCD436HP and BCD536HP scanners. ProVoice systems currently cover more than six percent of the U.S. and Canadian population in several major markets, which is more than 20 million people. Before this revolutionary addition to Uniden's scanners, the public has been virtually shut out from monitoring these public safety radio systems. This enhancement provides inexpensive direct access for the media, local agencies and the public, so everyone can be better info rmed and prepared. From: N1CHU
Topic: 2613 Message: 2678

"How else would they be able to do that?" Before the Pro Voice option on the X36's they wouldn't have the ability to monitor the system legally... They would be totally dependent on what the agencies agreed to share, listen to recordings, etc. that's no longer the case with Pro Voice... Unless the system is encrypted. Some cities/towns created citizen committees (in an effort to satisfy the paranoia relating to "police state" concerns) that were allowed to oversee agencies using encrypted or proprietary comm systems. Systems that prevent the legal monitoring without agency permission. These overseers are vetted, meaning members must be approved and are allowed privileges for only what the encrypted agency agrees to.

But don't get me going on the police using encryption. Yes, it necessary for sensitive issues. But that's what MDT's and alternate forms of communications (cell phones-although not totally dependable for emergency comms) are for. Most all routine comms can be in the clear.

Bill

I KNOW HERE IN Mobile County, Al

That some agency is providing the 3 local television networks with Harris Provoice Police Radios.

You can hear them in the background and at times you can hear the alarm for a hold up.

How else would they be able to listen to comms…..

I recall those days.. I wonder if agencies still do that..

On Thu, Jan 14, 2016 at 10:56 AM, N1CHU n1chu@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

An interesting footnote to the EDACS PRO VOICE option posting that eluded to a cheaper way for new media to listen buy using the x36 products was when the City of Hartford got its EDACS trunked system years ago, the media was given or assigned portable radios programmed to receive only as there were no scanners that followed trunking yet. Of course that all changed.

Bill

On Jan 14, 2016, at 12:59 PM, Gary Saffer ghs159@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

The only EDACS system in CT that I know of is Hartford. That's analog, as is the soon to be replaced EDACS system in Worcester, MA.

It's sort of a shame that EDACS is going end of life, but it is ancient in technology terms. I always thought of it as equivalent to Motorola Type I trunking and I don't now of any of those systems that are still operational.

>
> Uniden Engineers Another First-to-Market Feature in Radio Scanner Technology Ability to scan and monitor EDACS ProVoice trunked systems now available IRVING, Texas, Jan. 13, 2016 /PRNewswire/ -- Uniden America Corporation announced today another breakthrough in scanner technology. Uniden has been a development leader in radio scanner engineering and is the only scanner manufacturer offering the ability to scan and monitor EDACS ProVoice trunked radio systems. This unique feature is available in Uniden's flagship BCD436HP and BCD536HP scanners. ProVoice systems currently cover more than six percent of the U.S. and Canadian population in several major markets, which is more than 20 million people. Before this revolutionary addition to Uniden's scanners, the public has been virtually shut out from monitoring these public safety radio systems. This enhancement provides inexpensive direct access for the media, local agencies and the public, so everyone can be better info rmed and prepared. Yes we have had this for a while now (upgraded a couple scanners already) ... guess they just got around to announcing it publicly.

Uniden Engineers Another First-to-Market Feature in Radio Scanner Technology Ability to scan and monitor EDACS ProVoice trunked systems now available IRVING, Texas, Jan. 13, 2016 /PRNewswire/ -- Uniden America Corporation announced today another breakthrough in scanner technology. Uniden has been a development leader in radio scanner engineering and is the only scanner manufacturer offering the ability to scan and monitor EDACS ProVoice trunked radio systems. This unique feature is available in Uniden's flagship BCD436HP and BCD536HP scanners. ProVoice systems currently cover more than six percent of the U.S. and Canadian population in several major markets, which is more than 20 million people. Before this revolutionary addition to Uniden's scanners, the public has been virtually shut out from monitoring these public safety radio systems. This enhancement provides inexpensive direct access for the media, local agencies and the public, so everyone can be better informed and prepared. Not exactly accurate. The only thing *illegal* to monitor, or attempt to monitor in the US of A is encrypted comms and the later added cell phones, then cordless phones. "Digital" signals are not illegal to monitor just because they are digital. This goes all the way back to Greg Knox, the daddy of trunked decoding and Bill Cheek who I *think* (IIRC) was the daddy of the data slicer. The voice wasn't digital, but the data channel was and still is, hence one of the reasons Uniden's first trunking scanner, the BC235XLT used the data channel to trunk and Radio Shack's first trunking scanner, the Pro-92 used the data stream from the audio channel to trunk. The lines in the sands were being drawn through patents on following trunked systems.

2682. Pro Voice Update

Yahoo group: BCD536HP
Date: 2016-01-04 19:17:33 UTC
From: Kajj 1
Topic: 2682 Message: 2682

Happy New Year Group!!

I do not know if this question has been asked and answered or not...

Can the BCD996P2 be updated to the new Pro Voice like the 536 can?

Could it be updated?

Are there plans to Update it?

You never know until you ask?

Thank You,

Thomas

Simply put: No. At least not at this time. It is technically
possible, I think, but only the x36 can be upgraded at this time.

That's a triple No for those questions. According to a post on RR the 996 doesn't have the hardware necessary.

No replaceable battery. The clock chip has its own battery which is only charged during power-on use. It takes about 50 hours to charge it and it will retain the clock for about a week or so between uses.

There's a problem with a certain number of them and there's been a software update to temporarily address the issue. The ultimate solution is to take advantage of Uniden's repair campaign.

Initially, the clock issue may not be a problem with a new radio. But after some time it will start telling you to set the clock each time you power up. Mine acted in such a manner. Uniden verified the problem and started a repair campaign to correct at no cost to you. Follow Bob's advice in his post and you won't go wrong.

Update your firmware from Sentinel

Once that's done its in the setup menu on the scanner itself under Upgrade if I remember. There's no way to do it other than from the scanner front panel.

  Same as you do for any other text tag. Use the scroll knob to select the number or letter, and use the 4 and 6 keys to move the cursor left and right respectively as it shows on the display.

2701. Firmware database update

Yahoo group: BCD536HP
Date: 2016-01-16 17:38:43 UTC
From: John Walker
Topic: 2701 Message: 2701

I’m trying to update the firmware and database but when I try to write Sentinel asks me for the micro SD location and none are available.
I’m following the manual

Any ideas ?

John

Enter it exactly as it is shown. You can select a hyphen the same way to
select letters and numbers. After the key is entered, hit the ENTER key.
I believe it will say "Processing" then will be set.

Hey Joe,Thanks so much for the reminder on how to set up the upgrade. Before you wrote I finally figured out how to input the hyphen and now it's all good. Both scanners are now upgraded. Thanks for your input.

From: John Walker
Topic: 2701 Message: 2706

Yes hitting the ENTER button works. It’s doesn’t say that in the instructions. WOW !

I was wondering how to select mass storage.

Thanks
John

Hi,
Thanks for the information because I opened a support case and am still waiting for a response.
Sorry about the rant coming but,
Where did you get this information?
There is nothing on the website that shows how to do this and when you buy the key they only send you the key and there is no link for anything in the way of directions.
Also, why do I have to use the keypad when I have two pieces of software for managing the radio in the first place?

GPS.

I believe you can use that as a serial port for control as well.

From: MCH
Topic: 2701 Message: 2710

You have to use the keypad because (and I am surmising here) there may be security issues if you could enable it via software. The software could get hacked, the communications to the scanner could get spoofed, or it may be that they simply have not added it to Sentinel yet (although they did already update Sentinel to support the ProVoice systems in the database).

Where do I get the info to use Mass Storage when communicating with the programming software? It's in the manual. The instructions to hit enter to enter Mass Storage mode are shown on the display when you plug in the USB cable.

I agree that they should have specific instructions, and I thought they did somewhere although I cannot find that right now.

Regardless, you can always ask on support forums such as this one. You will likely get a faster response, and in some cases a more accurate response.

Have you tried charging it? (leave the scanner on to charge it)

If you have, and it will not hold a charge, there is a repair campaign that
will fix the issue.

I'm fairly certain it does not. I believe the
power must be on for the RTC battery to charge.

The serial port can be used for control but unlike the 996XT and the 996T I can't find anywhere to change the baud rate for that port and the interface is not at all responsive at 4800 baud. Am I missing a setting for this? I've looked in Settings and under the GPS section but haven't found any.

The reason I would like to use the rear port is that I use Proscan to operate the scanner remotely using the front connector and if you reboot the computer, you have to always unplug and re-plug the front connector to get the screen and make the selection that lets you chose Serial Port or Mass Storage to reconnect the software with the scanner.

Don, KE4JD

GPS.

I believe you can use that as a serial port for control as well.

Don, I use the serial port with Proscan. After installing the Uniden drivers, I just opened Proscan and chose the port, The default baud rate for me is 115,200. I got the serial cord to use brom Amazon.com.

It's a key you purchase to enable ProVoice
decoding on the x36 series scanners.

Bill,

Every Channel that The City of Mobile uses is ENCRYPTED! Well except here are 2 channels that are not encrypted and one is for City Busses.

Who wants to listen to bus comms?

Has been this way over a year now since they switched over.

I just don’t seem to understand why that someone in the agency thinks it is okay to provide the News with radios

So they can report on what is going on, but we the citizens are not allowed to listen.

There are only 2 channels that are not encrypted and one is for City Busses.

To me it isn’t fair. I have been scanning since the late 60’s…

To: BCD536HP@yahoogroups.com
Subject: Re: [BCD536HP] EDACS ProVoice trunked scanner

"How else would they be able to do that?" Before the Pro Voice option on the X36's they wouldn't have the ability to monitor the system legally... They would be totally dependent on what the agencies agreed to share, listen to recordings, etc. that's no longer the case with Pro Voice... Unless the system is encrypted. Some cities/towns created citizen committees (in an effort to satisfy the paranoia relating to "police state" concerns) that were allowed to oversee agencies using encrypted or proprietary comm systems. Systems that prevent the legal monitoring without agency permission. These overseers are vetted, meaning members must be approved and are allowed privileges for only what the encrypted agency agrees to.

But don't get me going on the police using encryption. Yes, it necessary for sensitive issues. But that's what MDT's and alternate forms of communications (cell phones-although not totally dependable for emergency comms) are for. Most all routine comms can be in the clear.

Bill

Bill,

I wasn’t starting a discussion on Encryption.

I was letting other scanner enthusiast who may come through Mobile County Alabama

that they will be unable to hear The City of Mobile. We have millions of visitors who travel to Mobile

every year to go to our local beaches and for Mardi Gras, Senior Bowl and other places like the Old Forts.

And YES! We do have those whobring their scanners with them!

/PRNewswire/ -- Uniden America Corporation announced today another breakthrough in scanner
technology. Uniden has been a development leader in radio scanner engineering and is the
only scanner manufacturer offering the ability to scan and monitor EDACS ProVoice trunked
radio systems. This unique feature is available in Uniden's flagship BCD436HP and BCD536HP
scanners. ProVoice systems currently cover more than six percent of the U.S. and Canadian
population in several major markets, which is more than 20 million people. Before this
revolutionary addition to Uniden's scanners, the public has been virtually shut out from
monitoring these public safety radio systems. This enhancement provides inexpensive direct
access for the media, local agencies and the public, so everyone can be better info
rmed and prepared. More:http://www.prnewswire.com/news-releases/uniden-engineers-another-f

Subject: Re: [BCD536HP] EDACS ProVoice trunked scanner

"How else would they be able to do that?" Before the Pro Voice option on the X36's they wouldn't have the ability to monitor the system legally... They would be totally dependent on what the agencies agreed to share, listen to recordings, etc. that's no longer the case with Pro Voice... Unless the system is encrypted. Some cities/towns created citizen committees (in an effort to satisfy the paranoia relating to "police state" concerns) that were allowed to oversee agencies using encrypted or proprietary comm systems. Systems that prevent the legal monitoring without agency permission. These overseers are vetted, meaning members must be approved and are allowed privileges for only what the encrypted agency agrees to.

But don't get me going on the police using encryption. Yes, it necessary for sensitive issues. But that's what MDT's and alternate forms of communications (cell phones-although not totally dependable for emergency comms) are for. Most all routine comms can be in the clear.

JFIPO,

Sorry, that last post got away from me before I had finished...

As for notifying people of this encryption, pass it along to Radioreference.com so it can be included in their database. That's the clearinghouse for all who are checking comms systems. I took a peek but saw no mention of encryption so it looks like an update is needed. I only saw EDACS and EDACS PRO VOICE listed as the systems being used.

From: ka3ffy
Topic: 2724 Message: 2724

hi all
    i have been trying to get this dongle to connect to my home wifi network.every time i enter the key. it errors out.

is this common? i have the latest update on the dongle.it sees my network. i select my network. it asks for a key. yet errors out.
what am i missing here? i run mac auth. and already entered the mac address. even when mac auth is disabled still can't connect.
any help will appreciated ka3ffy

WEP is not supported. It's not as secure as WPA
anyway, so it's a change you will want to make.

2730. view zip code scan list

Yahoo group: BCD536HP
Date: 2016-01-29 19:10:14 UTC
From: fred163@...
Topic: 2730 Message: 2730

How do I view the channels that it scans after I enter a zip code? I entered my zip but I think it has left some out because I do not hear them now. Great scanner. Have a diamond scanner antenna and am picking up stuff 47 miles away.

2731. Re: [BCD536HP] view zip code scan list

You can hit the CHANNEL button and scroll through them.

Make sure you have all the Service Types enabled. It will
not scan any channels assigned disabled Service Types.

Fred,

Your question is rather vague but try this;

Using the software, save what you have (as one of your favorite lists) when you plugged in the zip code. Give it a name, anything you like. That way you will be able to go back to it when needed. That list is also displayed in the program for you to see and audit. You can turn on or off systems, further customizing your favorites list.

Hope this helps,

Bill

That's a 996X or 996XT with the RH 96 remote. It's not a 536.
Siren is supposed to be the "remote" for the 536. There's an iPhone
version out, but that's useless to me since I have an Android phone.

It does seem to work intermittently. Can work just fine several times in a row, and then fails to connect several times in a row, then work again. It’s like pulling the handle on a slot machine. You don’t know if it’s going to work each time or not. Think there are still bugs that need to be worked out.

Yea, I've always liked the term "kludgy", when referring to Butel Software (especially the newer programs, but hesitated using it because I wasn't sure of the spelling. But I've used Grommert's software almost religiously since trunking came to be (for the obvious ease of programming all the added parameters trunking introduced).

This latest fiasco was unnecessary however, my problem had already been identified and a workaround offered. I just did not know it. Apparently anyone getting it for the first time didn't see this issue because they received the newest update (the current offering which works with the 325) from ARC's website. But those who already had ARC XT PRO did not get updated regardless of if you had the program set to download updates automatically or manually asked the program to check.

(I accidentally sent the post before I finished it.)

This glitch, not allowing my version of ARC XT PRO to update as per the offered method from within the software, instead, giving me a false understanding that I was already running the latest version when I attempted to update, is why I posted my original concern that the software and scanner were not communicating. It caused me to look elsewhere for a remedy. A search gleaned a newer Uniden USB driver which I installed. But that had no positive effect. So I checked for problems at my end-comm ports, etc. Thankfully, someone posted what I did not see in any searching I did... But was about to try as a last ditch effort... Reinstalling the ACR software. I was going to uninstall and reinstall but the post said all that was needed was to install right on top of it. Which I did with success.

I never did find the fix on my own even though I was told it IS out there somewhere. I even went looking for an ARC Yahoo group that I hoped was created for such programming issues. I found none. And seeing nothing included on the BUTEL website addressing it, I was left to resorting to this group. It cost me 3 days of back and fourth postings before luckily someone posted the fix.

After downloading Free Scan on the advise of Joe, I was able to effect communications between my computer and scanner. That told me my problem was with the ARC software and my next step was to email Grommert. Before I did that I saw the "fix" posting here so I didn't bother asking Grommert. But I do intend to drop him a note. I want to ask him if there will be corrective action taken where the update feature includes the new install for 325 users. My guess is that is the plan, now that they have learned tweaking was needed to accommodate the 325... Maybe they haven't gotten around to labeling the update with a new version number that the update feature recognizes.

Thanks to all for the help,

Bill

From: Steve Smith
Topic: 2007 Message: 2750

Hi,

Has anyone heard any news on the Siren app for Android? I find it odd Uniden has been silent for so long about this. Certainly Upman or someone at Uniden monitors this forum. Yet they never chime in when someone inquiries about the Android app. In Upman's YouTube video at https://youtu.be/A1GBlAhZxcU, I posted a question six weeks ago in the comments section of that video asking for an update yet Upman and Uniden have remained silent. Am I the only one who finds their silence odd and upsetting? After promising us the app, doesn't Uniden at least owe us an explanation? It seems they don't care about us. Now I know there are those on this forum who could care less about the app and those members can ignore this post. For those of us who want and expect an Android app, we need to let Uniden know they can't just make a promise, not deliver and then completely ignore our inquiries. All I'm asking for is an update on the status of the app. Why would they not want to tell us that? I have an Android tablet in the dash of my car. The ONLY reason I purchased the BCD536HP was because of the promised Siren app. I feel like I've been cheated and why shouldn't I feel that way? Upman, I know you must be monitoring this forum or you YouTube channel. Why don't you give us an update?

For those of us who want and expect an Android app, we need to let Uniden know they can't just make a promise, not deliver and then completely ignore our inquiries. All I'm asking for is an update on the status of the app. Why would they not want to tell us that? I have an Android tablet in the dash of my car. The ONLY reason I purchased the BCD536HP was because of the promised Siren app. I feel like I've been cheated and why shouldn't I feel that way? Upman, I know you must be monitoring this forum or you YouTube channel. Why don't you give us an update?

I agree. I purchased two 536's because of this highly touted feature and it's never worked as advertised. But what did I expect? I bought a new car complete with factory installed OEM air conditioning that died within six months. It took the dealership 3 attempts at fixing it and I started to threaten "Lemon Law", thinking I would get the entire vehicle replaced. Nope, turns out the manufacturer had the option to simply refund me the cost of that option! And I would have been driving one warm vehicle if I didn't take the money I was reimbursed and invest it in an aftermarket AC unit. They wouldn't even send it out and pay for the job, just pay me instead. Good thing it got fixed! Still waiting to say the same thing for the 536.

What ever became of that class action suite?

I did the same thing with an iPad mini Mark. But I haven't gotten around to learning if I can have the display come on with the radio. I have a gizmo that supplies power to it when I turn on the ignition and off 2 minutes after when I turn the ignition off. So I need to connect again and again, the wifi manually. The iPad mini is probably not the best choice for a larger display. Any ideas as to how I could improve on this are welcome.

To clarify, no anger. Any factual and non-flame post regarding the Android app has been approved. So far that includes all posts on the subject. As I mentioned, one off-topic post was rejected recently, but it was not regarding the app.

OT posts are cause for moderation (for unmoderated users) but not cause for a ban. To be banned, that would take intentional flames or spam or something similar.

Do you want something LARGER than the "Mini" in your vehicle?

Yes, unfortunately m, you have to open "Siren" and make wifi connection each time.

2767. Vehicle Install Help

Yahoo group: BCD536HP
Date: 2016-03-10 18:27:34 UTC
From: scan800@...
Topic: 2767 Message: 2767

I'm in need of some advice on a mobile scanner install. I have an extra 536 that I would love to install in my car. Dash space is tight. I was thinking about getting an ipod touch running Siren in a semi-permanent mounting with the 536 in the trunk. The lack of proper power up/down is something that I can live with, but there is no way I can live with the delayed audio coming through the ipod. I need to run it from the scanner. What is the best way to deal with volume control? I don't want to run it through the stereo, since I want to hear them both at the same time with independent volume adjustments.

This isn't a 'Siren sucks' post, but I'm not impressed with the capabilities of Siren. It does not handle the scanner power cycling very well as it will not reconnect automatically. It would sure be nice if there was a way to increase font size. The app does not respond to text size changes in the Settings/Accessibility section. I started looking at the Whistler 1095/98 with remote head thinking that might be a better route, but as a long-time Uniden fan-boy, I'm not thrilled about having to learn another complex scanner UI.

I'm kind of stuck, but the wifi issues and overly simplistic Siren app are pushing me towards the Whistler solution. Thoughts?

Brett - N7OLQ

You could get a powered amplified speaker with volumen control.....

I would install a remote amplified speaker off the earphone jack and
just use the iPOD as control-only. Get a speaker with a local volume
control and mount it somewhere accessible.

I do have to ask - why the issue with the delayed audio?

Oh, and for a "larger font" use an iPAD Mini. :-)

You could also look at the 996 with the remote head.

I have both the 596 and 996 and love the 996 for my daily driver and 596 if I'm travelling somewhere I don't have programming for.

I run the 536 with an IPad mini in my truck. The siren app is just plain useless because it requires a wifi connection each time I turn the radio on. That means I need to first assure the iPad is connecting to the radio and then the siren app has to connect to the wifi connection. It's all done manually, sometimes the app won't connect! And then when it does work, the whole affair gets bleached out by the sun! All I want is a larger display. I've asked for advice here also and haven't seen any who are trying to do the same.

Bill

I'm in need of some advice on a mobile scanner install. I have an extra 536 that I would love to install in my car. Dash space is tight. I was thinking about getting an ipod touch running Siren in a semi-permanent mounting with the 536 in the trunk. The lack of proper power up/down is something that I can live with, but there is no way I can live with the delayed audio coming through the ipod. I need to run it from the scanner. What is the best way to deal with volume control? I don't want to run it through the stereo, since I want to hear them both at the same time with independent volume adjustments.

This isn't a 'Siren sucks' post, but I'm not impressed with the capabilities of Siren. It does not handle the scanner power cycling very well as it will not reconnect automatically. It would sure be nice if there was a way to increase font size. The app does not respond to text size changes in the Settings/Accessibility section. I started looking at the Whistler 1095/98 with remote head thinking that might be a better route, but as a long-time Uniden fan-boy, I'm not thrilled about having to learn another complex scanner UI.

I'm kind of stuck, but the wifi issues and overly simplistic Siren app are pushing me towards the Whistler solution. Thoughts?

Ignoring the reset issues (if any) on power up, the simplest solution is to get a speaker with a volume control. There are several available for under $10 on Amazon and similar, typically in the CB market (I guess folks still use them?). It does NOT need to be amplified (which only creates more issues in this case, such as another power source, alternator whine). The key here is to make sure that the cord will reach your radio, else you'll have to extend it (more connectors means more potential points of failure). Be VERY sure that everything isn't in the way of a heater vent or similar issue, yet it has air to 'breathe' so it stays temperate. It should be in a location that is easily reached when the drive is completed or it will kill your vehicle battery in a few days (or less). Do NOT put it on the ACC line of your vehicle fusebox, that's begging for trouble with electronics.

Make sure that the mount is electrically attached to the vehicle frame (grounded); which reduces noise (even better if you can ground the scanner case). If you're running power to the battery (best of all worlds) you need to protect the wiring AT the battery. I use two 50 amp self-resetting circuit breakers (#12 wire) for my (ham) radios at the battery, then at the radio end of the run, the appropriate fusing to protect the radio(s). You protect BOTH the positive and negative wire at the battery, not just the positive. The circuit breakers protect the wires, the fuses protect the gear at the other end. Cigarette/power plugs are not recommended but do work ok for the scanner (because they're inherently noisy, annoys some electronics).

I would suggest trunk mounting or under a seat, possibly in a center console (it depends on the vehicle of choice, not visible, secure) then using Ad Hoc wifi to your device. I routinely run power, antenna and speakers wires in the channels under the door trim into the dash area (or under the seat); it keeps them safer from wear and the significant other from whining.

Then you use your iOS device to run Siren (ad hoc), control the volume at your listening position via the speaker. You'll want plenty of audio (turn it up) at the scanner, so you have headroom to control how loud it is for you.

What you may want to consider, is loading several favorites at startup, then use Quick keys to manage what you hear (0: Fire, 1: LE, 2: Med, 4: Aircraft etc). That can be managed by Siren as well as temporary avoids if you get into an area with interference.

The audio latency can be extreme; scanning before Siren 'talks'. There are other audio options, but they lack the control of Siren. If you run Siren, you can't run the other apps, the scanner can't do more than one

audio path on wifi. So until they fix (finish) Siren, there isn't a lot of options.

If that sounds like too much effort, consider getting a 436, which can be hung on a mic hangup, but you'd have to look at the wires. They're MUCH cheaper than last year.

The reason I would recommend an amplified speaker is two-fold:

1. If you use the earphone (the only fixed level output on the 536) that is not strong enough to drive a non-amplified speaker. I would recommend not using the external speaker output since the volume could change (if the control gets bumped) and if it changes low you will not have enough audio, and depending on the speaker design you could short out the audio amp if the speaker merely shorts the audio to ground to reduce the level.

2. Using an amplified speaker you will also be able to adjust the volume lower *or higher* than the input with no loading issues or level issues. If the speaker is tapped off the scanner input there should be no noise issues that would not be present on the scanner to start with.

At least connected to my iPhone, I'm seeing about a 3-4 second delay on the audio. So the display is close to real-time with the scanner, but the audio comes in 3-4 seconds later so quite often the display is already cleared before I hear the traffic. Like many long-time scanner listeners, I only look at the display after I hear the voice stress clues that indicate something important is being communicated. It isn't useful if the display has already gone blank as scanning has resumed on the display before the audio has finished. I do have an Ipod mini that's sitting unused (I prefer Android), but there is just no space to mount it without blocking something. If I could only tie the scanner display to the car's heads-up display on the windshield... that would be sweet!

1) Except that there isn't a 'fixed' level output, the front and rear '536 connectors output level are controlled via the volume control. The front is significantly lower output (intended for earphones, a protection method for your ears) but is still controlled from the volume control.

2) Using an amplified speaker means another power source (even batteries, which will fail when needed), usually the vehicle itself, which is visually unappealing AND lets the speaker amp amplify the vehicle electrical noises too (alternator whine, ignition or injector noises etc). It is also very likely to be impacted by a nearby transmitter, if any. Speaker amps are not well designed (for $10 what do you expect?) and subject to a wide variety of issues.

If the scanner is properly mounted, there is near zero chance of it being bumped, much less a chance of the volume being changed. Properly in this case means physically secured (from passengers, feet, luggage etc), nothing visual for potential theft risks and in a location that allows air exchange for keeping it cool(er) in the vehicle environment (away from heater vents).

Overdrive (by ~20%) the volume from the scanner to above what you intend to use, then adjust the speaker volume down to the proper level. If you manually power it down, you can note the volume value on the display, simply restore that on power up. Do NOT turn the scanner all the way up as it will stress the audio amp and WILL cause distortion in the meantime.

I looked at that option but since those heads were discontinued, the used market prices have gone up. $170ish, plus, you still don't have the ability to control power from the head unit - which is what led me to the Whistler. Although I'm not at all surprised no one in this group is encouraging me in the Whistler direction :-)

I forgot about the earphone not being fixed.

If you run the speaker off the power source for the scanner, there is
not a second power source, and if you lose one you lose both.

I didn't suggest a $10 speaker.

Passengers? Feet? Do you often carry passengers in your trunk? :-)

As for the bumping, I've seen radio connectors broken off that were on
securely mounted radios. That takes more than just a bump, but is proof
bumps happen. Of course, personal vehicles are subject to less abuse.

Brett,

That's also more than likely because you've already invested in the '536 and wanted to use that. Have you considered the center console (if it fits)? Simple adding a speaker out of the console would be sufficient if that works out for you. Routing power and antenna is usually fairly simple, even if you have to put in a small hole (enough for the connectors to pass).

If you're going to purchase another, I still suggest the 436. It can store the exact same programming, hangs from a mic mount and the controls are right where you want them, except the display can be near invisible in unmanaged light. The basic setup would be, power to the vehicle and the rubber ducky antenna, not horrible visually.

I have a 2010 Honda Accord. My 536 is mounted where the center console storage area is. I use the iPhone as a remote (sort of) display so I don't have to take my eyes off the road.

The radio is still within easy reach to use the keypad and volume/squelch controls, as these are not controllable from the iPhone. The ONLY thing the iPhone will do is "Hold" and "Resume Scan", which in all honesty is all I need it to do.

Unidentifiable copied the HP interface perfectly, in terms of what it LOOKS like, except most of the functions don't work. You CAN'T adjust volume and squelch from Siren as these are adjusted by rotary knobs on the radio.

For my purposes, it's a great combination.

The iPhone is still available to take incoming calls and when the call is done it goes back to Siren.

To solve the audio delay problem I just "mute" the iPhone.

Sent from my iPhone

Rick has some good points that apply to mobile installations, agreeing with most but two items I question... The first is amplified as opposed to non amplified speakers. If your ride is quiet, an amplified speaker may not be needed. No sense in spending more money for overkill-just assure the speaker has a volume control if you want the ability to adjust audio level if the radio isn't within reach. I run an amplified speaker due to my ride being a noisy truck by comparison. The other question deals with running 50 amp circuit breakers or fuses. First, they both do the same thing, disconnect power. Two parts to this, first circuit breakers vs fuses... The difference is a circuit breaker can be reset, a fuse just blows and must be replaced. Good from a cost standpoint where a new fuse must be used each time it blows but bad from a standpoint of it being too easy reset a circuit breaker. We tend to get lax when it's simply a matter of manually resetting it. We sometimes neglect to determine WHY it popped to begin with. And worse if it automatically resets itself. Fuses and circuit breakers blow for a reason, usually a dead short across power and ground. Without them the wires would get too hot and possibly cause a fire. Before replacing a fuse, check the circuit wiring for the cause. The other associated issue is with the size of the fuses... 50 amps may be what Rick needs to power his ham gear, it's larger than what I am using for my ham gear but his power needs may be higher than my gear. But if it's only a scanner receiver, transmit power is not an issue. Rick only uses his 50 amp example to describe how the breakers, fuses and wiring size in his installation. Your needs, if only running a scanner, are no where close to 50 amps. Use the manufacturer recommended size of inline fuse and wiring. Using a larger than needed fuse lets your circuitry heat up to a higher temp in the case of a short. Not good. You could loose your ride should it catch fire.

Bill

It's ok Joe, I have 'senior moments' all the time, it's allowed at my age I'm told (forget, memory is the second thing to go...). I checked it again before I wrote last time.

I suggested that a speaker with volume control is available online for $10 or so. I have a couple, but I don't need or care for them. What is important to me is size; a small speaker that sounds good (does NOT need to be theater quality, prefer slightly tinny with almost no bass for communications quality). They're actually hard to find (of good quality) so I save what I found over the years (the Nokia cell phone drop in had a wonderful speaker). Radio Shack used to sell a nice tiny speaker (~2.5" square) but it was $30 if you could find one, now LONG gone.

In the home shack where space is less of an issue, not much beats the mighty Motorola speakers (the ~5" square black box). I don't lose those either, use quite a few of them. They tolerate a LOT of abuse (look bad, but still work).

Passengers, for under front seat mounting, can easily kick a scanner, bad plan. Trunk mount is less problems, but more wire. I mounted my dual band on the trunk pass through in the back seat of the car so on the rare times I have to update firmware or programming, I'm don't have to reach across the trunk (just open the pass through). With the hatch closed, it's deep enough in the trunk to not get knocked, yet not visible in the vehicle too (battery under rear seat, easy access). In my truck, the ham radios are under the rear seat, near the back wall (hard to kick).

In a commercial vehicle, almost all bets are off. Only if it could pass the tests in a fire engine could it be called 'firefighter proof' (if there is ANY chance of breakage, a FF will find it). But there are more places for the install points too (storage cabinets, under tool boxes, behind the rear seats on the walls) and visual isn't as important.

Don't forget moisture intrusion (rain) when routing and mounting...

Nothing wrong with the Whistler. At the time I bought my 536, the Whistler wasn't out, yet. I didn't want to wait. Plus I liked being able to use my iPhone as a remote display. In color.

Firefighter proof? Now wait a minute... Are you saying that Firefighter's (yours truly, retired) break things? Well, maybe there's some truth to that. Trying to adjust a portable radio while wearing those nomex reinforced fire resistant gloves has caused a snapped control knob or two. ☐

2785. Re: [BCD536HP] Vehicle Install Help

Yahoo group: BCD536HP
Date: 2016-03-10 22:37:03 UTC
From: Rick WA6NHC
Topic: 2767 Message: 2785

Hi Bill,

For clarity, I have an HF ham radio station in my truck, which can draw (peak) 40 amps during transmit (200 watts out). The truck hauls the fifth wheel out to where no cell phone has ever worked (which can be a good thing, trust me); yet I may need to call for assistance while I'm there; so it's a safety thing. I have other radios installed as well (160M -> 900MHz for the hams on the list).

Should the vehicle negative become compromised (loosen, get cut, falls off), it is possible that the vehicle system current could pass through the radio wiring (black lead), overloading it, causing a fire. So I (and you should) use the circuit breakers to protect the wiring (AT the battery). The radio should be bonded (grounded) as well for the same reason, except incoming via the antenna plays in too.

What I described gives me about 10 amps of 'headroom', in case both the dual band (~9 amps) and the HF are transmitting at the same time (Kenwood 'Sky Command' or a simple oops, remember the HF is peak @ 40 A). Each radio is protected by the appropriate fusing near the RF deck(s).

Most folks won't need 50 amps of protection; adjust to your needs, plus a little headroom; fuse the radios as required.

I use circuit breakers near the battery instead of fuses for two primary reasons: (1) the under hood environment can be brutal; they don't rot like fuses and the connections are more than sloppy slip clamps; they're 'bolted' down and (2) they self reset (presuming a temporary causal event). At any time there is a failure, the user wants to know why and address the situation as needed.

Why run power to the battery and not the vehicle wiring? Because the vehicle has numerous noise sources (computerS, radios, dash display, monitor sensors) and the wiring may not be enough to manage the load(s) of radios. The battery also acts as a HUGE capacitor, reducing the noises, minimizing voltage sags and is NOT part of the vehicle wiring (just part of the power source) so whatever noises the radio(s) produce (except RF generating, transmitters) won't bother the vehicle systems.

I also make my installs as benign to the vehicle as possible (no holes or spliced wires). But in the case of scanners, I have to see wires (antenna, power, speaker to sound system and GPS output from the ham APRS GPS)... I hide what I can, the significant other has to tolerate the rest.

If you have a vehicle so loud that it requires an amplified speaker, that loudness will cause YOU to go deaf over time, adding a loud scanner

may not be the wise long term choice. Almost all current radios have more than enough volume, so maybe pay better attention to the placement of the speaker. My preference (when I can) is slightly above the middle rear view mirror (not blocking it). It's close to the front seat riders, clear of obstructions including a clear path the rear seat, so a lot of volume is rarely needed (except freeway speed, windows open, tunes blasting days). Another option (harder to hide wires) is the whiplash protection 'headrest', right next to the listener ear (making sure impact cannot happen, ouch!).

I take my time on any install. I study the car/truck carefully to evaluate the options. My preference is to put control points (control heads) within the normal visual scan that all good drivers do (left mirror, windshield, center mirror, windshield, right mirror, windshield, dash, windshield, repeat) so that the eyes are not off the road, ever... NEVER looking down. Figuring that out take time. Learning to manage by Braille takes longer.

I built an aluminum frame that tucks onto the dash of my truck (velcro'd in place) for the control heads, wired covered by a dashmat. I put a cheap towel over them when not in use to keep sun heat and damage down (cheaper to replace the towel) and to block them from view when parked. 8 years later, no issues.

To keep the list noise down, you may email me directly if there are questions. I've been at this for a VERY long time and learned these 'tricks' the hard way.

Yep, abo-solutely! I once was a firefighter, but now I feel better each day...

I did 34 years of it (paid, made Captain) and that chapter is closed. I do other things now, trying to forget a few things while learning new things.

If you put an A shifter and a B shifter in a small closet with 3 bowling balls and lock the door, in 20 minutes you reopen the door to find that one bowling ball is missing, another broken and the third one is pregnant, neither FF admit knowing how or why; yet C shift has already told the Chief. :-D

If you really want to field test strength and durability of a product, loan it to a fire agency for testing. They'll break it in ways you NEVER thought of...

But this is off topic, so I'll add that includes radios. There are reasons that Moto are built TOUGH (and are useful as hammers)... ;-)

I've actually seen that happen. The radio caught fire and nearly started the truck. Only good to come of it was that it was a competitor who installed it so we got the customer back. The chassis ground came off the battery. All the starter current flowed through the radio.

That's why I never run the ground to the battery - ground to the chassis instead.

I'm thinking about an ipod touch either below the climate controls or a vent mount below the display.

You could also look at the 996 with the remote head.

I have both the 596 and 996 and love the 996 for my daily driver and 596 if I'm travelling somewhere I don't have programming for.

Which is exactly why you put a protection device at the battery, it opens under excess load. If you only use chassis bonding, you don't take full advantage of the noise reduction benefits of the battery (a HUGE capacitor).

Also you may not have a good solid bond via the chassis for much the same reason that install went up in flames, it's often a poorer ground, dependent on straps, welds, no rust, paint, dirt... and in the case of high amperage (i.e. my HF station), those elements may be too small for the load and screw up the vehicle electronics when they fail. The vehicle manufacturers don't anticipate the loads that some users (us) put on the wiring; it's better to go around the existing wiring for a clean circuit to the source, the battery.

Going to the battery, protecting the wire as I've done is the better method and recommended by most two way shops and manufacturers these days.

I believe in physics being physics. A ground is a ground is a ground... Be it the chassis or a battery terminal. Loose it (your ground) either way and you got trouble... Maybe. Short either ground out to 12 volt positive and you've got trouble... Definitely.

On Mar 11, 2016, at 12:23 AM, MCH mch@nb.net [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

I've actually seen that happen. The radio caught fire and nearly started
the truck. Only good to come of it was that it was a competitor who
installed it so we got the customer back. The chassis ground came off
the battery. All the starter current flowed through the radio.

That's why I never run the ground to the
battery - ground to the chassis instead.

I have both the Uniden and Whistler scanners and it seems to me that the Whistler 1095 or the Whistler 1098 scanners are the way to go. The control head is small and easily mounted just about wherever you want it. An external speaker would still be needed but that an issue easily solved with simply a small speaker (amplified or not)! The Uniden scanners are easy to update but I sure do miss the remote-head capabilities that my 996s have!!

Trunked systems need sites. While you can delete those you
will never use, you want to keep those in areas you will use.

Yahoo group: BCD536HP
Date: 2016-03-19 00:00:58 UTC
From: ron.chaffin@...
Topic: 2802 Message: 2802

My HomePatrol 1 includes the alpha tag I have assigned to radio ID's with the .wav file when I select 'encoded by' as one of the details displayed when looking in the folder I have the file(s) in. Other details can also be selected to appear:
Name, Title, Size, Contributing Artists, Album,Album ID, Attribute,Author, Availability, Bit Rate, Computer, Content Created, Content Type, Creator, Date, Date Accessed, Date Created, File Extension, File Name, Folder, Genre, Item Type, Length, Owner, Participants, Path, Perceived Type, Protected, Shared, Shared Status, Space Free, Space Used, Total Size, Type.

I cannot find the alpha tag assigned to the radio ID on the .wav files that are saved by the BCD536HP, I have checked through all 300 + options available. All the other's listed above do populate. The radio is showing the radio id alpha tag. Any thought?

From: queenhorserider@...
Topic: 2804 Message: 2804

Hello,is anyone having a issue with adding lake County Indiana P25 System to the scanner? I have used Centinal,and ARC536PRO,and after putting in the Public Safety and Fire/EMS,I do not receive any local Police or Fire? It is the APCO-25 Common Air Interface Exclusive. Do I have to set anything else,all I do is set to Favorites on Centinal,and write to scanner,am I to do anything else,it is like it is not picking up the P25 Phase II,do I have to set a band plan? The frequencies are there,I set the quick keys? What may I be doing wrong or forgetting,I do make a fovorite list,and add themto it? Do I need the Provoice for this system?Any ideas may help.Thank you in advance,Mark..

There is no programming difference between P25 Phase I and P25 Phase II.

I agree it's likely the Service Types that are not enabled.

BTW (to the OP), the band plan is received from the control channel.

I've had problems with the iPad not recognizing the scanner in the vehicle. After trying what you did with the scanner many times I find I have more success if I turn off the ipad, let it reboot. But that's not a definitive cause of the problem. The reason the iPad doesn't handshake with the scanner could be caused by either. It's just that I've learned by trial and error to first try rebooting the iPad for quicker results. It happens with both 536's I own. So I lean towards the iPad being the culprit. You can flip flop back to the scanner being at fault if it runs faulty software-not saying it is, I just don't know (software would affect more than one scanner if it were installed on more than just the one tested.)

I have not experienced the connection being lost once it's been made.

Nothing definitive but since you asked...☐
Next time it happens, try rebooting your phone first, and then see if it recognizes the scanner. As usual, your results may vary.

Hope this helps,

Bill

It may be getting worse. Today, I went through the wifi settings again on the scanner, but this time the wifi signal did not show up as a 'network' on my iPhone. If the wifi network does not show up at all, I can't blame the iPhone. I pulled out my Android phone and it did not see the BCD536HP network signal either. I'm going to try swapping the antenna with the one from my other 536 and also try renaming the Access Point settings to see if that will do anything. This is getting frustrating.

As a side note, I was able to wire the scanner so that it will do a proper power down with an RF remote control switch. Its pretty slick, but this wifi problem is making me wish I bought a Whistler. Next time Paul, keep it simple.

Changing the antenna likely won't do anything.
You need to try changing the WiFi dongle.

And the Whistler WiFi is non-existent.

Uniden's "simple" solution didn't fly (sell) too well.

"And the Whistler WiFi is non-existent."

That's the point. I don't want WiFi or Bluetooth. I can't solve software/firmware programming problems, but I can solve remote-head cable run problems.

Actually, the dongle is the entire WiFi unit - antenna, processor, and all circuitry associated with WiFi. The jack on the scanner is simply a USB interface.

I believe you can troubleshoot the dongle since it's a simple matter to unplug one and plug in another.

I am trying to use the Centinal and the ARC536Pro to download the Indiana Lake County Public Safety,and the Illinois Star Comm talk groups. I have tried both software's,and I cannot get anything to pick up.I see it scanning,all the groups are turned on,and just scans and no receive,is anyone also having this issue with this scanner downloading these System Voices? I load the groups,set the Quick Keys,and write to scanner,and nothing get picked up on this type of trunking. Any issues I am missing,these scanners have a issue,even using the Zip code,loads up Illinois,Indiana,Michigan,and does not pick up any Digital channels,and or talk groups. I thought that just putting the Zip in would work,and using the software,adding the Trunking freq and the groups,and nothing picks up.Is it me or does this scanner have a software missing issue.I use the
P25 X2 TDMA when writing to the scanner,on both the IL and IN software set up,and does not say anything.Can anyone look at these System names and see if I am doing something wrong.I only have 2 more days on the trial for the ARC,and the Centinal is with the scanner.These are the Lake County Public,Indiana Safety,Project 25 Phase II,and the same with the Illinois Star Com for Cook and Will counties.If anyone close by can try these and see if it works on your BCD536HP,let me know,other wise I am lost.It seems the other Trunking Systems work but these.Any HELP would defintely be appreciated in advance,Thank you,Mark Bradley,Cedar Lake Indiana,,,,KB9GTB,,New at this scanner also,Gave up the BCD996P2 for the same issue,as I thought Is was a bad scanner and decided to upgrade the the enter the Zip code in and away you go,NOT..THANKS<Mark

why don't you just wait for the frequency database gets updated? then just update your scanner. there is no reason to send these scanners back to anyone to program them.
 i don't think scanner masters do anything but edit the database already inside the scanners.
these scanners are self programming.

Proper updating consists of clicking UPDATE, then UPDATE MASTER HPDB,
then when that is done, click SCANNER, then WRITE TO SCANNER.

I'm not sure if there is a YouTube video that shows that or not.

You can use any card. Make sure it's formatted as FAT or FAT32, then use the CLEAR USER DATA function in Sentinel, then write the database to the card.

Also check the package for the stock one.

Mark,

First a clarification or two... If you purchased the UNIDEN BCD536HP new, from an approved source, you have the latest technological parameters. Meaning you don't need "rebranding". Your radio is ready to rock and roll. It just needs to be programmed.

Secondly, Concerning the "close by" gentleman with the 996 Phase II radio that needed to be sent back before it would work correctly... That radio also does NOT need to be rebanded. It too should have been ready to program right out of the box! As you did not state what it is Uniden found wrong with this radio, I suspect either nothing was wrong or he sent it out to Scanner Master for programing and is embarrassed to admit it. I don't know and I really don't care. And neither should you. Here is what you should do... Come over to my house and let me show you, or verify for you the correct programming procedure. Can't do that? Connecticut is not that close? Find yourself someone closer or if you can't do that, have someone elsefind that closer person for you that has the expertise to verify your programming is correct or program it for you and can determine if the scanner is operating correctly once it's been determined it has been programmed correctly. These radios are just like computers... Garbage in, garbage out.

I was not kidding about the local fire departments, I would start there.

Bill

Paul,

You are taking issue with someone for never, or not regularly updating the database? Not everybody bothers until the need arises... Such as in this case or a planned trip requires. When I first got my scanners the novelty wore off quickly. A sense of "If it ain't broken, don't fix it" set in. I haven't bothered to update the database in over 6 months... And have no intention to because there is simply no need. But that's just me. There is no right or wrong for choosing to update or not. Instead, it's a personal preference. I can no more be concerned with how someone else manages their updating chores than I can about their favorite flavor of ice cream.

Hi Bill,

I think you are mistaken. If you watch the radio reference site, you will easily see that many radio systems (networks) are very dynamic. This is from adding channels, users, IDs or more. To not at least take the occasional download and verify accuracy does not allow you to hear the most for your area. Did the cops add a SWAT channel? Is there a new fireground channel? Is the XXX agency using the newer mandated interoperability channels? Changes happen, even back in the deep piney woods.

At least a few times a year, I suggest it's worth a look.

I never said changes didn't happen. What I am saying is that no changes had been made that adversely affect services I am interested in. And until they do, I see no need to bother. (Little or minor changes I don't notice don't affect me-if not noticed, what's the sense?) With what I listen to, there won't be any changes until the gear is no longer replaceable, causing system upgrades possibly involving the mode of transmission.

So no, I am not mistaken. But don't take this as me trying to sell you on my practices. Like I said, there is no right or wrong, just personal preferences.

I'm tempted to close with "Gotta go now, I need to get the latest updates!" But that would be rude, just rude.☐

Bill

Hi Bill,

I think you are mistaken. If you watch the radio reference site, you will easily see that many radio systems (networks) are very dynamic. This is from adding channels, users, IDs or more. To not at least take the occasional download and verify accuracy does not allow you to hear the most for your area. Did the cops add a SWAT channel? Is there a new fireground channel? Is the XXX agency using the newer mandated interoperability channels? Changes happen, even back in the deep piney woods.

At least a few times a year, I suggest it's worth a look.

Also if you can't find it. You can use any card. However 16-32 GB cards work well and class 10 are better than the slower older cards.
And if you need to go that route download the card files from the website and extract them and copy them to the card. Copy all the folders with the file. It will then do a firmware upgrade and once done you can start using it. Do not power off the scanner during firmware upgrade.

Essentially - I agree - but the OP has issues, as well as when you first receive one of these mini-computers, they may be both the DB and the firmware may be completely out of date.
Issue is - no idea where he is or how often the data may change or his level of competence. For myself - as Ohio is rolling out an entire new system, changes are daily and I change my data before it ever hits Sentinel.

  My BCD536HP has stopped receiving all of my fire dept dispatches and operations channels. My HomePatrol 1 is doing the same thing. And having two different softwares to operate one radio is ridiculious! Is there help or Youtube video or 1-800 or something out there to help with proper updating? I have not found anything to this point that is pertinent.

As a follow up to my mobile wifi problems, I swapped the Wifi dongle with another one and to my surprise, for the past few days it has connecting to my iphone every time without any problems.

So I'm going to try the 'bad' one again to rule out any other things that might have changed, but I was wondering if there is a way to re-update the firmware (it already has the latest version). Or maybe I should send it in for repair? Any advice?

Thanks

You might be able to force a download, it depends on the interface program. But that would be worth a try.

Failing that, send it in. Worst case is... I've seen the dongles for sale from them. The price isn't horrible but if you can show it's faulty, they should just replace it.

No you are mistaken. You plug the USB dongle into a computer then do
the update with the software provided by Uniden.

It was a bit of a hassle, but it worked.

I'm with Rick. The dongle update is not done through Sentinel.

Maybe something happened to your scanner that it wouldn't talk
with the dongle, but it is definitely not updated with Sentinel.

2848. PRO-VOICE QUESTION

Yahoo group: BCD536HP
Date: 2016-03-27 16:17:58 UTC
From: Kajj 1
Topic: 2848 Message: 2848

Can the BCD536HP receive the Harris Pro-Voice Radio System id I order the BCD536HP with the Pro-Voice option?

Thanks'

Thomas

As long as it's not encrypted, the 536 with
the ProVoice upgrade will decode ProVoice.

Yes. Harris owns the Pro Voice technology and is the only company that offers it. Or offered as they don't offer it any longer.

Yet there are contracts that run into the 2020's that require they
support it and I read of a municipality that just switched to ProVoice a
couple weeks ago...

But, they aren't offering or building new systems any longer. Which is what I meant.

I think that the current mobiles and portables can do either P25 or Pro Voice, so there will be radios available. I don't know about receivers, transmitters or the rest of the infrastructure.

There is no doubt demand for support from systems that can't afford all new systems.

Joe M.
I am confused now!! As always!!
You said it does support it and another subscriber says,

" Yes. Harris owns the Pro Voice technology and is the only company that
offers it. Or offered as they don't offer it any longer."

If it is not offered any longer, why is Uniden and BearCat Warehouse
offering the Pro-Voice upgrade on their sites
and sending me e-mails to purchase one with the option of adding Pro-Voice?

Thanks'

Thomas

In a sense, we are both right. Harris is the only company who offers
two-way radios on ProVoice. But Uniden scanners (x36 series only)
support it since December, 2015 - as you saw with the ProVoice upgrade.

Uniden licenses it from Harris.

2855. Re: [BCD536HP] PRO-VOICE QUESTION

Yahoo group: BCD536HP
Date: 2016-03-27 20:06:14 UTC
From: Rick WA6NHC
Topic: 2848 Message: 2855

To be more clear:

Harris owns the rights, leases them to Uniden for use in the scanners
(passing some of that cost on us, if we option to buy in).

Harris is no longer selling NEW systems.

Those with existing ProVoice systems typically have a support contract
for XX years, which means the (now dead end system) will still be used
(which is WHY Uniden got the license) until it is no longer viable to
maintain (can't get parts or support). Then those systems will migrate
into new(er) systems (simple economics).

From: Kajj 1
Topic: 2848 Message: 2856

Thanks for the replies Joe M. & Rick!

This is off a little.
I didn't know that Harris was not selling that system any longer.
Isn't that funny! Mobile County and City of Mobile Alabama bought a new
system from them about 2 years ago.
The City got changed over a little more than a year ago and they are just
now starting on the other Municipalities within the County
and the County vehicles. The system cost $40 Million dollars and their
service contract runs out from what I understand
from other sources in about 6 months... Figure that one out!
I believe there was some underhand dealing going on...

>You are taking issue with someone for never, or not regularly updating the database? Not everybody bothers until the need arises... Such as in this case or a planned trip requires. When I first got my scanners the novelty wore off quickly. A sense of "If it ain't broken, don't fix it" set in. I haven't bothered to update the database in over 6 months... And have no intention to because there is simply no need. But that's just me. There is no right or wrong for choosing to update or not. Instead, it's a personal preference. I can no more be concerned with how someone else manages their updating chores than I can about their favorite flavor of ice cream.

Paul Haskins,

Further on my not bothering to update unless I see a need...

Sorry for not mentioning this... although I don't bother updating when there is no need, I find myself at least once a week logging in to RR for various reasons. My RR home page is the first page that comes up and with RR hi-lighting changes, I am doing what you advocate, namely checking for changes. True, I don't update, but that's because I see no changes. My taking your post literally, the use of the word "update" (hooking up the scanner and overwriting data) instead of your meaning, (downloading the entire database) caused me to post unnecessarily, comments that were foregone conclusions. For this I must apologize.

Thanks for treating the topic with kid gloves,

Bill

Paul,

You are taking issue with someone for never, or not regularly updating the database? Not everybody bothers until the need arises... Such as in this case or a planned trip requires. When I first got my scanners the novelty wore off quickly. A sense of "If it ain't broken, don't fix it" set in. I haven't bothered to update the database in over 6 months... And have no intention to because there is simply no need. But that's just me. There is no right or wrong for choosing to update or not. Instead, it's a personal preference. I can no more be concerned with how someone else manages their updating chores than I can about their favorite flavor of ice cream.

My BCD536HP has stopped receiving all of my fire dept dispatches and operations channels. My HomePatrol 1 is doing the same thing. And having two different softwares to operate one radio is ridiculious! Is there help or Youtube video or 1-800 or something out there to help with proper updating? I have not found anything to this point that is pertinent.

Uniden BCD Download Page:

BCDx36HP Sentinel v1.03.01 Revision Notes
Added ability to update the Wi-Fi Dongle directly from Sentinel.
Add the ability to select a fixed drive from the drive selection list.
Corrected some typos.

2860. Siren app - Am I missing something?

Yahoo group: BCD536HP

Topic: 2860 Message: 2860

SO I finally got an iphone. COnnected my 536. Connect it in infrastructure mode to my home wifi. It gets an IP of 192.168.1.166 .

Open the siren app, go to settings, hit connection, enter that IP, hit Done - nothing. And even if I go right back in to connection, it defaults to the default IP 192.168.1.77.

And often when I go into wifi setup and tell it to connect, it times out with "Connecting error".

Password and SSID is right. Any suggestions?

Thanks :)

When wifi password is already enter you need to go to the last letter or number of your password using (6) on keypad don't go past or you will get that connection error. If you enter the correct IP address in your iPhone you will need to click round home button twice fast close the sign app by swiping up on app. Should work I think you're fine yourself closing the app a lot to reset siren.

So enter IP, hit done, then home button twice and close the app? I think I tried that, no luck.. :(

I want to be able to listen at work - what ports do I need to forward from my WAN to the IP of the dongle?

Thanks :)

Evan,

I've use TeamViewer to manage my home (shack) computer when on the road. I use the apps for Windows to hear and control the scanner on the shack computer, the audio is passed to TeamViewer; I can hear and control the scanner remotely.

However, if you wan to play, you can use VLC (freeware) to take in the wifi audio and stream it through your firewall (audio only) AND allow Siren control (it's two parts in one app, control and audio) via the firewall too. The short version is: it's complicated but it can be done and not simply using one program/app.

OR you can use Broadcastify (there is a specific app for that) to put your scanner on line (audio only)... That requires the use of a computer sound card (mine are all busy with other chores).

It's not for the timid but no one has stepped up with THE answer, including Uniden. The app they provide for Windows (meant for their engineering staff) shows potential, as does Siren but apparently nothing has been done in over a year in that arena.

While it may be nice to hear the scanner at home, ultimately for me, it was better to simply get another scanner.

Relating to this excerpt...

There was to be a class action suite against Uniden, claiming they failed to produce a highly advertised feature, the Siren app. The app was promised, giving abilities as yet not realized... Anyone know the status of it? Was it just a big bluff, or not acted upon due to Uniden's "reasonable" attempts to deliver and falling short, what amounts to hyperware?

And, this engineering group's edition of the Siren app... Was it released to the general public as a beta? Is Uniden still pursuing the app's original promises?

"The app they (Uniden) provide for Windows (meant for their engineering staff) shows potential, as does Siren but apparently nothing has been done in over a year in that arena."

I know nothing of a class action law suit, but since some of the promised functionality has been released, I don't see it surviving a test in a court. However, since there was apparently some confusion in my comment, I'll restate. The app for Windows that Uniden provided is RH-536HP. It has a limited ability, but it works.

RH-536hp is not Siren. It can be downloaded from:
http://info.uniden.com/UnidenMan4/BCD536HPFirmwareUpdate

Look about half way down the page for the specific link of:
http://info.uniden.com/twiki/pub/UnidenMan4/BCD536HPFirmwareUpdate/RH-536HP_mkII.zip

RH-536HP was meant for in house testing and was never intended for public release, yet it was. As far as I know there is no support for it.

Back on point, RH-536HP shows potential for a viable Window application, yet it was never fleshed out. Siren shows some different viability and features, yet the Android version was never released (produced?)

To answer your questions specifically, since there is still (well after a year since that posting) a viable link in one of the Uniden public forums, RH-536HP has been released to the public (just not a finished product in my view). As I have zero knowledge of the internal workings of Uniden, I have no idea what they're working on or if they're trying to move forward. As a business, one would expect (or hope) for progression, but there is no outward sign of progress in this arena. The lack of any released statement concerning updates is, disconcerting. It at the least gives the appearance of an internal problem (budget, product support, lack of commitment, lack of programming resources etc) but again I have no knowledge of their situation. Bad business form is not typically the basis for a class action lawsuit.

My ideal response from Uniden is: an app for Windows, that gives full control over the entire BCD-536HP via wifi; including a module that allowed multicast over the entire Internet and accessible to Siren via the Internet (not just single user over the home/office LAN); with a web page server for other listeners allowing audio and display of current channel in use via a standard web browser (web server optional or a push to another server; control via Siren only, some security added of course). That would have significant financial gain for Uniden from the (admittedly small) scanner community. That program, I would pay money to have.

Regards,

Rick wa6nhc

Thanks Rick,

For the URL to the RH536HP.

I won't expound on the class action lawsuit, probably defunct for the reasons you stated, but there was at one time a site where one could add their name to a list.

Not sure if I follow your last paragraph... Were all those functions/features originally offered in the advertisement when the 536 was first introduced? I seem to remember expecting to use my iPhone with an app that allowed the remote operation of most all functions from anywhere in the world, provided there was WiFi available. And that was the primary reason I purchased two of the 536's. The price was to be all inclusive, therefore any lesser offerings SHOULD constitute a reduction in price. Customers were strung along for better than two years waiting for Uniden to provide all that was promised. And not all was provided. The amount of approx $100 was thought to be the fair market value for the dongle w/ promised functionality, but that was only a somewhat fair starting value from which to argue. However, it was realized after one "walked" through all the legalese of such litigations what kind of settlement might be realized, it didn't make much sense to pursue it. It certainly wasn't anywhere near $100. (I purchased a Bronco II from Ford. A class action lawsuit was settled relating to the vehicle's propensity to roll over. It caused numerous fatalities. And I got a choice of a first aid kit or the monetary equivalent out of it.) That's why I haven't bothered to inquire sooner. My asking about if it was still breathing was only done out of curiosity.

Thanks again,

Bill

If you're talking about the site I think you are, that was basically dropped over a year ago once the dongle was fixed (by the manufacturer) and the Siren app was released. The issue they were complaining about was resolved.

I love class action lawsuits. The attorneys get millions of dollars, the class person who 'started' the class gets hundreds of thousands, and each member gets pennies.

Remember the safeway 'tuna' class action suit? Guy claiming the 7 ounce can of tuna only contained like 5 ounces of tuna?

The attorneys got millions. The guy who started the class got tens if not hundreds of thousands (Did he REALLY eat that much tuna?). Members got $25.

Sorry Joe, not even close. What we ended up with is definitely not what originally was printed in advertisement on the very box Uniden packaged the radio in and all other official releases early on.
The issue remains unresolved but for reason stated, it's a worthless point to further ponder. I wouldn't have replied but I take issue with your use of the word "resolved".

Bill

From: Rick WA6NHC
Topic: 2860 Message: 2873

The last paragraph was my ideal hope for an app. It's certainly within the realm of reality, but I'm not a code writer and it would take someone with a broad knowledge to glue the pieces into a viable, useful 'pretty' package... streaming audio, streaming display data, web site, firewalls... I've got most of the discrete programs that allow me to do this, but it's complicated even with my nerd hat on and I don't code. :-) Plus I simply don't have the time, so I use RH-536HP and the BCD536_Audio_Player on the shack computer, then remote my computer via TeamViewer if I *must* listen in. [I was in San Diego last month when a major storm hit at home, I needed to remotely listen in so I could assist on an FB forum I help admin. No one knew I wasn't at home.]

I wouldn't even care if the app was for non-graphical linux, one of those is on here 24/7 already (IRLP with other options, like a web server) as is the shack computer, so either flavor is just fine with me.

But it's a daydream. [Uniden: It's worth $50 to me if you make it! How many could you sell?]

If that's what the suit is based on, it will fail.

hello group with all of these troubles with these fancy uniden scanners maybe it would be time to go with the whistler scanners.they might not have a siren app but for the most part i do not see the need for the siren app.is there a users group for the whistler scanners.people are complaining abut not getting replies back from uideni have 996p2 which is not receiving any phase 2 signals.i have been considering sending it back for uiden to check it out.

I'd happily switch to the Whistler. Would love a scanner in my car, and the whistler has a remote mount kit.

You buying? :)

I had thought to myself to replace the data display (on linux) with my own status bar on the bottom of the desktop, using the UDP XML packets streamed on port 50536 and python. Maybe pull in the audio as well but not sure of syncing the two. It also has a web browser port open that responds so I can ping it and check the response on port 80. Don't know what else it does.

You are right Rick that it would take a broad knowledge of tunnelling (avoid port forwarding and firewalls) web interface and audio streaming and security to program, but the pieces are out there.

One thing is I'm not sure if the API (command to change settings) is published. The other is that the scanner (and external internet) address can change when booted. Without a central server (like teamviewer has), a change is IP address assignment could prevent an external connection.

Mike

Because… the class action suit can tie up several attorneys or an entire firm for years. But yes, the attorneys do get paid first, off time top, and the “class” gets a distribution of what’s left. Why do you think we go to law school? Seriously, that’s how it works. Remember the class action suit against Blockbuster Video for illegal late fees? Members of the class got a $10 coupon for free movie rentals. Something like that. Yippee.

Yes, the remote head on the Whistler is nice, but I don’t like the display as much as I do on the BCD536HP. Fortunately for me, I have a place where it fits just nicely in my car. If that was a problem, I’d have no choice — and no problem — with going with the Whistler.

While waiting for the evening VK0 opening... Then the FT4JA went QRV today too... both near antipodal to here. If you're not a ham, that is meaningless.

The port values are published, but it would leave a rather broad gap in the firewall (a pair of ranges). Tunneling makes it more complex than should be needed.

My server is on the same LAN and because of IRLP I can use a proper domain name for it, regardless of the connection (if it changes, the DNS gets updates within ten minutes). I've relied on that for many months. Another option is a paid service (I used to use DynDNS when it was free).

One can get VLC to stream the audio, the sole control port for Siren can be forwarded to the scanner... the web interface is more complex. Yes there is some command documentation out there, I'll check my cache later if you can't find it. Now if a programmer could clump them into a pretty package...

Ok, grey line is opening, be back later.

You're an attorney? My condolonces :)

No, I don't remember the Blockbuster suit. I bet the - what's the 'proper' term for the starter of the class? I bet he got thousands of dollars.

Not an attorney – yet – have to first pass the bar exam! – but to answer your question, the person(s) who start the class action suit are called the “named” class members. Yes, they get a good chunk of change and the rest of you get your token settlement. Usually a coupon or a check for $10. Personally, I was involved in a class action suit against Radio Shack (I’d worked for them off and on back in the 80s and 90s). They were charged with improper calculation or whatever of vacation time. All I did was sign something that confirmed I was employed between the dates they were asking about. And when it was over, several months later, I got a check in the mail for about $600. I was ok with that. I didn’t care about the suit, but they told me, in advance, what my “share” would be so I said, why not?

My understanding is it's a licensing issue with RadioReference. I think that is also why you cannot print or export anything from the full database in Sentinel.

I would LOVE for there to be a Freescan for the 436/536 scanners but it doesn't look like that will ever happen.

Ron

i see everyone jumping on uniden for no app or a bad app.well.....seems like no one can write a good remote app.
these are aa whole new style scanner. so much in them, this is one problem wih software run radios. so many variables, so many changes, and so many complications
 between fast scanning, differences between P1,P2, analog etc. each with delays or no delays. it causes hell on software that can't adapt. there are limits of what can be done.
i hear people say i am going whistler.. not sure how good they are. i have seen reports it is a radio shack made scanner or something like that. well i doubt it is any better. they too have big plans or apps. yet i see no apps yet. always in the future.
I use 1 536in mywork vehicle because i travl. works great! i work in many different states.the 2nd 536 i use while at home. being ab,e to access it from any computer on the home network is great! this way i don't need a scanner in every room, and the wife won't complain listening to it aal the time. my only complaint is having to run two programs. 1 to listen and 1 to control it. many say get the ARC basic for it, i will have to download the trial version (if they have one) and see how that works.
i have ARC for my other scanners. time will tell.

No, nobody is jumping on Uniden for a good or bad app. The issue (which by the way is moot) was the promise of features that included a dongle, and allowing the ability to conduct two way communication whereby control settings could be changed remotely from anywhere in the world, provided a WiFi connection was available. The app is merely the graphic user interface written for specific IOS's... Which by the way also fell short in the android department... Or should I say non-existent.

The rest of what you write is pretty much what the majority of users think. I find myself agreeing with you.

Whistler bought GRE. When GRE lost their manufacturing plant in China (the Chinese govt owned the property and had other plans for the plant) they couldn't relocate without loosing their shirts. GRE made a good scanner as does Whistler.

Radio Shack would contract with a manufacturer to build scanners that Radio Shack in turn would sell as their own. (Radio Shack acts as a distributer. I don't believe they ever built anything themselves. Anything they wanted to market would be put out to bid.) They put Radio Shack named scanners on the shelf right next to the GRE GRE built a number of scanners for Rat Shack. Radios minus a stage and/or without a feature or two, then sell it for less. Maybe the selectivity was a bit less, Intermod more prevalent but in a lot of regions it wasn't a problem. If it were, Radio Shack wouldn't offer the scanner for sale-they'ed only be exchanging them for the more robust GRE's which were less susceptible to the region's interference issues.

i see everyone jumping on uniden for no app or a bad app.
well.....seems like no one can write a good remote app.

these are aa whole new style scanner. so much in them, this is one problem wih software run radios. so many variables, so many changes, and so many complications

between fast scanning, differences between P1,P2, analog etc. each with delays or no delays. it causes hell on software that can't adapt. there are limits of what can be done.

i hear people say i am going whistler.. not sure how good they are. i have seen reports it is a radio shack made scanner or something like that. well i doubt it is any better. they too have big plans or apps. yet i see no apps yet. always in the future.

I use 1 536in mywork vehicle because i travl. works great! i work in many different states. the 2nd 536 i use while at home. being ab,e to access it from any computer on the home network is great! this way i don't need a scanner in every room, and the wife won't complain listening to it aal the time.

my only complaint is having to run two programs. 1 to listen and 1 to control it. many say get the ARC basic for it, i will have to download the trial version (if they have one) and

see how that works.

i have ARC for my other scanners. time will tell.

So we can’t use Freescan to program/control our scanners even if we program them manually?

I did the Google search; Freescan BCD536HP. The results put me on to Radioreference. And there it is... Not supported. As I was only interested in fully controlling remotely, I did not check for manual local programing capabilities. Maybe the answer to your question is there...

2903. Exclamation point????Won't go away??

Yahoo group: BCD536HP
Date: 2016-04-03 17:08:28 UTC
From: queenhorserider@...
Topic: 2903 Message: 2903

Hello to all,what is that exclamation point on the scanner next to the Wi Fi signal on the scanner? I seem to have a hard time finding any info on this,is there i issue with the Dongle? I shut the scanner off,unplugged the Dongle,turned the scanner back on,even reset to factory,and the exclamation point is still hanging around.Any one have a idea,fix,or how to remove this???I want to THANK YOU,in advance,Mark KB9GTB,Cedar Lake,Indiana
Does anyone else have this also.one more thing,I think I did the Dongle update correct,after I did the steps to update it,I plugged it back into the scanner,and the saying (updating Wi Fi or updating Dongle or something,just caught it before it disappeared?

2904. Re: [BCD536HP] Exclamation point????Won't go away??

Yahoo group: BCD536HP

From: Rick WA6NHC
Topic: 2903 Message: 2904

It means it is having a WiFi issue, usually means it isn't connected to a network.

Enter the network info on the scanner, connect, it should go away.

The latest version of Sentinel allows the scanner to update the firmware, LET THAT RUN when you see it.

Rick

Probably just to get your attention, which it did. No, I don’t know why it’s there, either. You’d think the usual WiFi symbol should be enough.

2906. SD card error

Yahoo group: BCD536HP
Date: 2016-04-04 14:13:48 UTC
From: amoeckel2@...
Topic: 2906 Message: 2906

Last night I had to shut the power off to the circuit that my BCD536HP is plugged in to, when I turned the power back on, I have a message on my display:
City data table read error. Please check CityTable_V1_00_00.dat in SD card.
Has anyone else had this issue?
If so, what is the fix?

2907. Re: [BCD536HP] SD card error

Update the database. If that does not work,
erase that file on the SD card then update it.

Not all units seem to develop the issue.

As far as anyone outside Uniden can tell, the fix was
implemented in late 2015, but it's possible it was earlier.

Additional to what Joe M. Wrote... See if Uniden will issue an RMA for the unit FOR THIS REPAIR PROGRAM. Make sure it's this free repair program. The serial number should be what they are going by to determine if you need to return the scanner. They really SHOULD be able to tell us where that cut-off point is. (I know my two 536's and one 436 developed the problem well after I purchased them. (I got mine very early in the first year of availability.) Only Uniden can tell if yours may also. I don't know if there is a closure date on this repair.)

Since not every scanner will have the issue, there is no way to tell by SN if a unit has the issue or not. They are going by whether you have the issues or not.

Joe M.,

Well then, if that's the case, I expect the reason serial numbers haven't proven effective in telling what units will be affected is because they were never able to pair up the batches of suspected components (causing the problem) with the radios in which they were installed. On the surface, that may seem irresponsible, but to track each individual piece (thousands) used to assemble a complete unit is probably impractical. And Uniden asking their manufacturing supplier to do so would cause the supplier additional expense which would be passed on to Uniden.

That is if... What Uniden is telling us, is true, they can't determine defective units by the SN. But it's plausible. For only the one reason I stated above. I say this because they know HOW to fix it. They learned how by identifying the specific defective or incorrectly valued components found on units sent in that exhibited the problem. I believe it was a set of capacitors found in need of replacement? On all the repaired units?

Bill

Joe,

An afterthought...

I wonder what it does to someone who returns the scanner (that does not yet exhibit the problem) for the fix under the special program... If they find the corrected components already in place... Does that someone now have to pay the service charge?

2919. Re: [BCD536HP] Uniden warranty work

Yahoo group: BCD536HP
Date: 2016-04-11 17:53:08 UTC
From: MCH
Topic: 2909 Message: 2919

I do not know, but Uniden is trusting people to not waste their time on repairs of units that do not need repairs. As for why some units are affected and others are not is unknown.

The fix for the display LEDs is replacement of the LEDs themselves. It is unknown what the clock fix is. That hints that perhaps there is a manufacturing issue with the LEDs. The ones that they are replaced with are different than the original parts.

Another possibility is that the components did not have tight enough specs when manufactured. Some work and some don't. You may not be able to tell if they work by the serial number or even from the component manufacturer.

Joe M.,

Ok. I'm not going to debate. Again, I congratulate you for your contributions. We all are fortunate to have your level of expertise to avail ourselves of.

The question of if someone should return the unit before it exhibits a problem has been answered by you and I agree. And I expect Uniden would not refuse to repair for free if and when it does go bad. The repair program is probably open ended.

Bill

Yes, as far as that goes... But if they could identify the batch of components, some faulty, some not... That would be helpful.

Interesting topic but it deals with manufacturing process. Shifting away from the intent of this group.

Bill

If your SN is qualified then you will receive an email with the pre-paid return shipping label.

If it does not qualify they'll notify you via email.

My LED was also swapped out when the clock issue was repaired all FOC.

Paul,Thanks for your suggestion, however I did unlock the silver thing and it flipped up. I did not try sliding it as I had no knowledge of doing that. Unfortunately, it's a moot poitn right now because I packaged the item and it is in FedEx possesion as I write to you. So, I will have to wait teh required two weeks to get it back, thta's all. I could not understand how the tech put it in backwards to start with but I understand that things happen. I love both my units and will wait as my 536 is working well. Thanks again for your help.

Why was your SD card in the scanner in the first place? The instructions state to just ship the scanner with no accessories (including SD card).

Well, when it was flipped up, you should have been able to just lift the microSD card out at that point, flipped it over, then latched it back down.

An install note: When you reinstall the card, slide it in right against the metal clip them flip it down. Not doing this may be why some people have issues with them.

With the added note this is for a 436 (for future post viewers).

The SD card does not fit if you attempt to install it upside down or backwards. Finding it in one of those positions (from Uniden) is a physical impossibility. When they say it only goes one way they aren't kidding. If it were FORCED to fit, it would have taken a determined effort on the part of Uniden's tech. A highly doubtful scenario.

The "not being able to find the 436 yahoo group" statement should have given us the first clue that the issue was rushed...

And I do sympathize with the author, remembering the first time I played with seating/unseating the SD card. I was only trying to remove the card. I put the radio down after initially unsuccessfully trying this. I realized I needed a better understanding of the mechanics and researched it BEFORE strong arming it. Because it surely wasn't built with safeguards against forceful handling.

2931. BC-GPSK SERIAL GPS RECEIVER VS BU-353 S4 USB

Yahoo group: BCD536HP

From: CULLYKOWAL@...
Topic: 2931 Message: 2931

I purchased a Uniden BC-GPSK for installation in my vehicle. I don't care for all the wires connecting the gps kit between the 536HP and the vehicle. (Short wire from the gps receiver to a plug adapter (DIN ?) to a db9 and another to a usb port on the rear of the radio; lots of wires on the front seat.) For a more professional install, could I use a BU353 S4 receiver with usb plug directly into the 536 usb port to get the 536 to see the gps determined location? Can the gps device get its power from the usb port on the radio? I would like to place the gps cookie on the outside of the car, if necessary using a usb extension cord under the carpet to get to the radio. Can the gps feature work without using the db9 input? The radio has a direct connection to the car battery. Cully, KSØD

The mini-DIN connector is small enough to fit through smaller openings in the bodywork or dashboard than the DB-9 connector. This makes it easier to permanently install the GPS puck in a vehicle. It can be placed inside the vehicle on the dash with no problem. It does not need to go outside.

The serial port on the 536 can either be the small Hirose connector on the front or the DB-9 on the back. On an INSTALLED scanner and INSTALLED GPS puck there will be no issue as wires are tucked up under the dash etc. Any GPS solution will necessarily have a Y-cable which splits the GPS cable to the scanner and accessory plug to provide the operating voltage to the GPS puck. There is no solution to having the Y-cable and various adapters, unfortunately.

The USB port could, conceivably, supply 5 volts to run the GPS through a Y-cable that replaces the current one with the 12 volt plug on it but this would tie up the USB port which must be used for WiFi functionality.

The GPS is an RS-232 serial communication device. It cannot talk directly to a USB connector nor can a USB GPS puck be used with it. The USB port on the 536 is used only for the WiFi mini adapter.

Do not confuse "serial" with "Universal Serial Bus" - they are not even remotely the same.

The 536 does not have the Hirose connector on the front, it has a standard USB-Mini that does not work with the GPS.

The 536 will only work with the GPS via the rear DB-9.

No, the BCD536HP will not work with USB GPS receivers. It will only work with serial GPS units connected to the rear DB-9.

The USB port on the rear panel only works with the WiFi dongle.

Were you using the external speaker jack (on the rear) or the earphone jack on the front? The earphone jack would be low on a speaker.

UNIDEN makes two versions of external speakers. Both are 8 ohms, and one is amplified. The amplified model is the BC23A. (A quick search for Uniden or Bearcat speakers should give you the model of the non-amplified speaker.) I am using the BC23Aon a Home Patrol I and another on the BCD536HP.

I also use Motorola commercial non-amplified speakers. The PD in my town purchased new mobile radios which the supplier installed. They used a garage bay at my firehouse and were tossing out all the old speakers. Some were 4 ohms that I had to add an additional 4 ohms so they matched an 8 ohm requirement for whatever gear I assigned it to. Tough commercial grade speakers. (I just couldn't bear to see these perfectly good speakers trashed. I asked the tech to throw them in my locker instead of the trash and then got accused of stealing them from the new radio supplier/tech. I even had a cop question me and I was suspended pending the outcome of the investigation! I was 3 days before the tech straightened everything out when he returned the next week. The guy who accused me of theft embarrassed himself to the point he left the fire dept before we canned him. He noticed my cubicle loaded with speakers, called the police directly without first asking me (his Captain) or the Fire Chief. Had he done that, he would have learned nothing was afoul. (Scratch that, the Chief says he would have told him it was none of his GD business!... and ask him if he was trying to start trouble!) Dumbass!

The BC23A also approaches that toughness of the commercial grade Motorola speakers.

As previously mentioned, whichever speaker you use, use the jack on the rear of the BCD536HP as the front panel one is for earphones. This front panel earphone jack has a maximum volume setting that is deliberately "dummied down" due to concerns over eardrum damage-hearing loss if the full volume was allowed through earphones into your ear canal.

Yes. Use the rear jack only.

But to answer your question, any external communications speaker will work. No need to spend extra for an amplified speaker.

In my opinion, the best one out there is the Vertex MLS-100. $45 at HRO. Some say it is too "bassy", but I like the deeper, fuller sound. Reminds me of the older boxey Motorolas. I don't like "tinny" sounding speakers.

From: baconater357@...
Topic: 2944 Message: 2944

Sent my BCD536HP to Uniden,telling them I cannot receive any local Fire and Police by manually adding my Zip code 46303,Cedar Lake,and using the Centinal software,what am I doing wrong? Do I have to reband the system,change something,totally lost. Cannot get Crown Point,Lowell,St.John,etc.,the locals near Cedar Lake.Trying to load the Lake County Public Safety,which is the APCO-25 Common Air Interface Exclusive,which is the Project 25 Phase II.Nothing using my area Zip code,some things I hear from Illinois,but either Analog,or Phase I from IL or IN,no Phase II of anything,no Lake County Public Safety,which I thought your Zip code was to decode.It also says something about TDMA modulation,now is this to decode this also.Any one run into this problem,Uniden tells me that nothing is wrong with the scanner,but I cannot get this to work on the Phase II systems,missing any settings on Centinal,I just leave it alone,I set my tag numbers,and quick keys after I append to Favorite list,make sure the Monitor and Download are on,Location Settings are in and set to on,everything is turned on,Police dispatch,Fire Dispatch,etc.
If anyone had a problem with the system,here in Northwest Indiana,or anywhere else with t he same issues,I need help.I even loaded the Trunking Discovery,nothing local,but Motorola Type II.Totally lost,any help will be appreciated,or I may have a scanner for sale,,,aggravated....THANK YOU,Mark,,,,,

Mark,

Terminology;

First, Rebanding is not an issue with your BCD536HP. It relates to older scanners not set up correctly, but with firmware upgrades can be, for trunking. Your radio does not have this problem.

TDMA is what Phase II is. They are interchangeable terms. Motorola P-25, without the Phase I or Phase II designation relates to Phase I. (They didn't need to add Phase I before the introduction of Phase II, there was only one Phase in use at the time) FDMA is Phase I and TDMA is Phase II. The F stands for Frequency and the T stands for Time. Phase II is an improvement for Phase I systems. It's a way of doubling up the amount of conversations held on one channel at the same time. And Phase II systems are compatible with Phase I systems. Meaning a system upgrade from Phase I to Phase II can be done peace meal, one radio swap out at a time if they choose to. Both will work together on the same newer Phase II controllers.

As for not hearing what you hoped to, check with the regional users groups. In RadioReference Forums they have a listing of forums on a statewide basis. Find the state you're interested in and you may find more current info specifically relating to the services you are interested in. Maybe the Phase two stuff isn't fully implemented yet, or its encrypted, etc.

Hope this helps

Bill

The problem is that mobile scanners generally put out between 2 watts and 5 watts of audio. The 536 puts out 5 watts. Handheld scanners will put out out between 200 and 500 milliwatts. I don't know what the 436 does. But that is why you would probably want an amplified speaker for it.

Are you asking how to program a Favorites list (FL)?

Have you gone through the intial setup with your zip code?

Have you watched the videos on how to program a FL?

Are you trying to enter a system that is not in the pre-programmed database?

If you can't get the 536 working what make you think one without any programming or built-in database will be better?

I have 4 (four) 996P2s, and I love them. I just bought a 536HP and I am struggling with the setup – it is very alien compared to the 15x or 996p2 line. Basically it wants to program itself, and if you let it, then you will be on first base.

You can modify favorite lists, etc, after.

That is as far as I have gotten in a week with it -- I did pay for and download the Pro Voice upgrade, and it works ! ‘dead’ channels here, I can now hear – and they sound very different.

Right now I cannot get SIREN to work - if anyone has any tips on that, I would appreciate it. The scanner is connected to my router - -I do a net scan and it shows up, I installed Siren on to my iPhone 6 and enter the IP address, but it just doesn’t talk to the radio. I can ping the radio from my computer or from my phone. Siren just doesn’t want to talk to it

Topic: 2949 Message: 2953

By the way – (assuming my last reply gets posted, haven't seen it yet) – I bought one of these last year and sent it back – I was too frustrated with it. Ended up with the 2 BCT15X and 2 BCD996P2s -- and now upgraded the 15s to 996s.. but I wanted PRO VOICE – so I bought , yes a seventh scanner, the HP – and it is a hell of a learning curve, until you let go and let it program the trunk systems itself. Just enter your zip code, and set your range to 30 miles or so, and whamo – I am listening to stuff I did not know existed around me. It was a long trek and I still have a long way to go – got the 996P2s in a rack and the HP is sitting here next to me so I can try stuff every night trying to figure out how to MANUALLY create my favorite lists, etc…. stuck on SIREN now….

Anyway – just wanted you to know that I share your pain --- bought one, sent it back, got the 966p2s then got two more, then I decided to try the HP one more time – and this time I think I have cracked the ice, at least it is tracking the trunking system in our county with towers I didn't know that have been recently put up, and talkgroups that are new, etc.

Hang in there.

A very common problem for new owners is to program in all the frequencies from Sentinel and not be able to hear anything. Open up Sentinel, click on edit profile, and THEN click on the "Service Types" TAB. Place a check mark in every box of every type of service you want to hear. Save it, and upload to scanner and you will be good to go.

From: N1CHU
Topic: 2949 Message: 2956

I read or heard somewhere that the vast majority of people who are newbies, buying high end scanners, have seen the scanners in operation and think "I want one!" And that's great! So they get one without any thought about programming, learn it's no easy task, and ask the owner of the scanner (that prompted them to buy one in the first place) for help. And the few that ask for help here, (although lately, it seems like more and more people are looking for help on this group) probably don't have that local help available. That may be due to first time buyers shopping for the cheapest price from Walmart's or Amazon, get the scanner and now need to deal with setting it up. They have no idea how to "tune" them in to the local stations. One guy told me "Don't you just tune up and down the band and push a button to put a station into memory like my AM FM car radio?".

In some cases this is what happens. With others, it's simply a matter of asking the guy that has a working model if he would help. Usually, that guy offers help up front. And we never hear from them on this group. There is nothing wrong with any of this, some merely want to be able to listen... They don't care about how it works and don't care to LEARN about how it works. They just want the same capability's, to be able to listen. Anything past being able to turn it on and adjust the volume is not in their playbook... and that's OK. I think a good analogy would be computers before GUI's (Graphical User Interfaces) like Windows came into being. The majority of people didn't want to deal with DOS alone and didn't care to learn it. But once a computer was made more "user friendly" with GUI's, sales skyrocketed.

With these new scanners, the GUI is comparable to the programming features available with services such as RadioReference.com and after market software used in conjunction with it. Another advantage is some dealers offer programming for a small cost and work with a new owner towards satisfying them. But even that is too much for some. I've had people ask to buy my BCD536/436HP, as is, already programmed... "Hey, it's working! That's all I want!". (Even after I offer to program a new one for them when they get it. I've even been asked "What if I give you the money, you buy and program it for me... let me know when to pick it up?".) While it's nice to know how a scanner works and be able to program it yourself, it's a chore. Especially when you know nothing of conventional, trunking, digital, terminology, never mind the learning curve associated with the various programming methods these monsters exhibit.

As marketing has everything to do with selling scanners, the ability to make them more user friendly is one concern that manufacturers study closely. The Home Patrol, with its ability to enter a zip code, the first to offer this feature, is a good example of this. And I expect even more user friendly improvements in the future. I don't have much to support that conclusion other than possibly marketing a scanner that comes programmed for a geographical region, requiring nothing more than plugging in an antenna and power plug! But even that has issues when you straddle two different regions. I wonder what others here have thought dealing with programming towards making the process simpler? Because the idea I floated would probably cause an increase in cost with the factory adding an extra "regional programming" step to the game.

I have sold some of my older scanners to locals and continue to support their programming needs, believing the more one does to support the hobby the faster it will grow. Which helps us all in the long run. As scanners are a small market, there is not much discount. But as the population becomes more aware of the existence of this product, advertising increases, the product becomes more common, making more people aware of their existence and sales increase, further driving competition. Presently, a lot of people, when observing a scanner in action, believe the owner must be some type of official, that the use of scanners is probably prohibited for the common guy on the street. This, while true in some locals, is the exception to the rule... Most of the country allows the use of home and mobile instillations provided they are enjoyed without attempts to deliberately violate the laws of the land... Such as listening to the police channel, learning they have been dispatched to a serious call, requiring much manpower, at one end of town, and using that knowledge to realize it's a good time to try and pull off a robbery 'cause there ain't no cops around!

So what ideas can you float that helps in making a top end scanner easier to use right out of the box?

...one man's opinion... And sorry about the length...

Bill

Are you saving your changes to the scanner?

When you create the favorites and work with Sentinel, that occurs on your PC.
Changes on your computer need to be saved and then written to the radio.

☐Are you asking how to program a Favorites list (FL)? Have you gone through the intial setup with your zip code? Have you watched the videos on how to program a FL? Are you trying to enter a system that is not in the pre-programmed database? If you can't get the 536 working what make you think one without any programming or built-in database will be better?
----- Original Message ----- From: kc2pjh@... [BCD536HP] To: BCD536HP@yahoogroups.com Sent: Friday, April 29, 2016 8:25 PM Subject: [BCD536HP] Sentinel Program Help
I just received my BCD536HP today and i have spent the last 6 hours trying to program it using the Sentinel Program.I have been watching youtube and call Uniden and have not been able to manual program a trunk system in at all. Can you guys help me out and point me in the right direction to manual program it. If i cant figure it out by Monday i will just return it and get the 996P2 instead and i really dont want to do that.
Thanks for the help

A lot of people in my small town have seen my scanner running when I work behind the counter. Because of this I have either sold to or purchased for several of the customers that want scanners. So right now I think I support 7 or 8 scanners plus my 6 scanners. We have a P25 phase 1 system that coves the entire state called WyoLink so programming favorite lists are easy as we all share the same list. And I do this support for the same reason you stated, they want a scanner but have no idea how to program it.

Excellent! A 10 day turnaround! I'm guessing the major portion of scanners needing the fixes has passed? (When I sent mine back I got an email telling me to wait until I moved up in the Que and they would notify me when it was time to return it. That way, I didn't have to go without while it sat on a shelf back at Uniden awaiting it's turn for repair.)

If you are referring to the BC15, and are looking to buy one, do a search on Google for "Uniden BC15" without the parentheses. It's called "shopping" for the best price. Just make sure you use a reputable dealer.

From: raidertom@...
Topic: 2909 Message: 2975

I have to say I'm a little disappointed in Uniden right now as I sent back my 436 after it was repaired because the SD card was put in uoside down and I tried to get it out as suggested but was having a tough time and so as not to damage anything, I called and asked for repair label, got it and then sent it back. It was received on 4/22 and is still there and not scheduled to ship until 5/13. I'm not sure why someone could not address this in a timely manner as it had already been there. By the time I receive it, it will be around another month. Paul, I know you monitor this but please do not take this personally. It's just frustrating no having my unit, sorry.

Agreed. With the way manufacturing is (in today's world), where parts are no longer stockpiled (saving the cost of a warehousing facility and the property taxes that go along with it-at least in the US). Many facilities order overnight deliveries for what they need. And if the parts are back ordered, there is a wait period. They usually tell you this up front. But not in all cases. I don't know if the Uniden repair shop works this way however.

And, on the other hand, the SD Card holder that Uniden uses on its BCD436HP (instead of the spring loaded port other portable radios use in the ham community) may very well have been stockpiled, causing Uniden to use what they had on hand. It could be the spring loaded ports you see used on computers and the ham gear I mention are of a patented design, costing Uniden more.

EVERYTHING I write here is all a guess on my part.

I advocate future designs should include the easier, user friendly spring loaded SD Card holders mounted to the exterior case much like the USB connectors. This would eliminate the need to remove the batteries in order to get to the card holder, and that mechanical nightmare currently used to secure our SD Cards. Or, hard wire the same read/write capability into the radio that the SD Card provides.

Bill

It's an SD card issue. I had the exact same thing and fixed it by replacing the SD card. I originally formated and reimaged the card and that fixed the problem for a few days, but then it started again.

Try a different card.

Can you time it? Is it ALWAYS the same time? Is it sometimes longer? Is it sometimes never?

2985. SD CARD ACCESS ERROR

Yahoo group: BCD536HP
Date: 2016-05-14 22:51:20 UTC
From: Roldham001@...
Topic: 2985 Message: 2985

hello Group,
I recently bought a used bcd536hp it didn't come with a sd card so I had one so I have formatted it and cleared user data and wrote to the card via computer. When I put card in it keeps coming up with sd card access error. ive tried channel 2 9 keys while powering on still nothing. Does anyone else have any ideas before I chalk this up as a loss and put it in the junk pile and eat a 420 dollar loss? I have eve gone to store and bought another sd card also tried it. Any help would be appreciated.

Thank Robbie

Did you format it as FAT32?

It sounds like a faulty unit, though.

2989. Faulty SD card?

Yahoo group: BCD536HP
Date: 2016-05-15 08:30:36 UTC
From: N1CHU
Topic: 2989 Message: 2989

My 536 is not stopping on a conventional programmed frequency when busy. In fact, the only conventional frequencies it does stop on are those that I have tagged as priority channels. The scanner shows all the trunked systems scrolling by when it is scanning, but not the conventional frequencies, except as noted. I have checked to assure they are not avoided. The frequency is properly programmed as verified by my putting the scanner in manual and spinning the dial until I see the channel in question. It hears the frequency while sitting on that channel.

With the latest posts that relate to the scanner turning itself off after 30 minutes, and the reason for that is a faulty SD Card, I wonder if this could also be my problem. And I wonder how it is Upman has come to the conclusion it could be caused by the card? An identical 536 (program wise) does not have this problem. One is in my truck, the faulty one in my house.

Bill

Another possibility is that those Service Type(s) are not enabled.

Did it stop on them before?

Also check the Quick Keys and AVOIDs.

Any SD will do, but some have reported better long-term results with Class 10 cards. Not sure if the additional is worth the $.
They come formatted.
In Sentinel, select "Clear User Data" and check the "show all drives" box, then run that function on the card. It will put all the necessary files onto the card for the scanner to recognize it (you can do this with the card in the scanner...just be sure to select Mass Storage mode on boot-up). Yes. Service types are enabled. I'm formatting the card and reloading it. See what success I have with that. Either the card, the software or programming errors would account for this strange behavior. If it's the card's fault, I can call it a hardware malfunction. If it's the software, I get to blame poorly written code. And last but certainly not least, programming errors, caused by humans. I'd like to think its not this. I will post my results after formatting the card.

I recommend SanDisk for two reasons - their general reputation and the
fact that is who is approved by Uniden.

Install it in the scanner.

Format it for FAT or FAT32 using SDFormatter

Clear the user data in Sentinel.

Write your data to the scanner as normal.

Joe M.,

As promised, an update on my attempt to identify the cause(s)...

One of the easiest things to try (after assuring all of the items you listed were not an issue) was to format the SD Card and reload my FL's. That worked. The scanner is now scanning both trunked and conventional systems.

I haven't identified a cause behind my problem... What causes the SD Card to corrupt? Does it have a set limit on how many times it will allow it to be written to like some of the firmware hardware?

In this case, the SD Card has been formatted and reloaded with the same data files as was originally installed and works correctly. So I somehow corrupted the data on the Card. I don't believe that means I permanently damaged the Card however... Because after formatting, it is working again. Or is it? I'm not checking every block of memory because it's not economical. But the card could be damaged and require formatting again... and again. I guess just knowing a new card fixes the problem is enough... "So change it and move on." I said to myself...

Upman,

I believe your earlier email was addressing the auto shutoff issue. And, as it also relates to my issue, how to format the SD Card is relevant.

I was hoping it was something as simple as re-formatting or replacing the Card, and, in my case, it was. I appreciate the input but already completed the "fix" BEFORE I read your post.

That is not to say I don't appreciate your hovering out there in hyperspace! Nice to know you still keep an eye one things.

I first removed the card and plugged it into the computer. It shows up a Drive E on my machine. I then conducted a complete format, plugged the card back into the scanner and ran "Clear User Data" in Sentinel. I added my FL's and was back in business.

Yes. Service types are enabled. I'm formatting the card and reloading it. See what success I have with that. Either the card, the software or programming errors would account for this strange behavior. If it's the card's fault, I can call it a hardware malfunction. If it's the software, I get to blame poorly written code. And last but certainly not least, programming errors, caused by humans. I'd like to think its not this. I will post my

results after formatting the card.

All great questions with no definitive answer yet.

But, I suspect you are seeing the initial symptoms of a
card going bad. I would replace it as soon as possible.

Likely the write used different parts of the card that don't have the
issue, but eventually those parts will get used again or other parts
will develop issues.

3000. Re: [BCD536HP] 536 shuts off by itself

Yahoo group: BCD536HP
Date: 2016-05-15 21:17:38 UTC
From: Walter Rymarczyk
Topic: 2979 Message: 3000

Aren't there different types of SD cards. I know for full-size SD cards there are regular SD, SDHC, and SDXC, which differ in age and capacity. I have an old digital camera that will only work with regular SD. For micro SD are there SDXC cards? If so the 536 might not support them.

Did you specifically enter MASS STORAGE mode on the scanner?

Is it possible your PC is using the Serial Driver for Mass Storage?
(check Device Manager) If so, remove that driver and let Windows
re-install the Mass Storage driver.

3005. RE: [BCD536HP] Faulty SD card?

Yahoo group: BCD536HP
Date: 2016-05-15 23:42:57 UTC
From: Radiotronic Gizmo
Topic: 2989 Message: 3005

When you put in a freshly formatted (FAT32) SD disk into the scanner and power it on. It does NOT give you the option of memory or serial – it immediately

Gives you the message:

“SD Card File Error .. Use Sentinel “Clear User Data” operation to initialize the card”

Now. If there was a step where I could have made such a choice, perhaps that is my issue.

Right now, when I bring up Sentinel and select “Clear User Data” AND CHECK DISPLAY ALL DRIVES,

I have a blank screen for the drive list.

I have tried several different SD’s currently in there is a SanDisk 32Gig – and sentinel does not see it as a drive.

R

To: BCD536HP@yahoogroups.com
Subject: Re: [BCD536HP] Faulty SD card?

Did you specifically enter MASS STORAGE mode on the scanner?

Is it possible your PC is using the Serial Driver for Mass Storage?
(check Device Manager) If so, remove that driver and let Windows
re-install the Mass Storage driver.

3006. RE: [BCD536HP] Faulty SD card?

Yahoo group: BCD536HP
Date: 2016-05-15 23:46:48 UTC
From: Radiotronic Gizmo
Topic: 2989 Message: 3006

As for the second part of your message, I am not exactly sure what you are saying,

But, when I power up the radio, the WIN 7 64bit system wants to use it as a disk, so

I would think it looks like a “MASS STORAGE”

I am stuck – tried several different SD card manufacturers , sizes, etc (and format options).

The radio will not see the SD card – it will only see the original. – I guess the next step would

Be to copy the original SD card onto the new one – but I don’t want to fool around with the only

SD card that works.

R

From: MCH
Topic: 2989 Message: 3007

Do you have a card reader you can try?

In Disk Manager does it show that card as a removable drive?

3009. RE: [BCD536HP] Faulty SD card?

Yahoo group: BCD536HP
Date: 2016-05-16 00:21:19 UTC
From: Radiotronic Gizmo
Topic: 2989 Message: 3009

The card reader is the only way I know of to format the SD card, which is what I use.

So yes, when I format it, and the format is complete, a window opens to show no files in it.

THEN I take it out of the reader and put it in the scanner.

From: BCD536HP@yahoogroups.com [mailto:BCD536HP@yahoogroups.com]

Subject: Re: [BCD536HP] Faulty SD card?

Do you have a card reader you can try?

In Disk Manager does it show that card as a removable drive?

3011. Re: [BCD536HP] Faulty SD card?

Yahoo group: BCD536HP
Date: 2016-05-16 00:31:04 UTC
From: MCH
Topic: 2989 Message: 3011

OK. With it still in the card reader, does it show in Sentinel?
If so, use the CLEAR USER DATA option on that drive.

Joe M.

3012. RE: [BCD536HP] Faulty SD card?

Yahoo group: BCD536HP
Date: 2016-05-16 01:05:31 UTC
From: Radiotronic Gizmo
Topic: 2989 Message: 3012

Ah you Sly Old Fox – yes, that did work as advertised. Thanks for hanging in there with me.

You got it figured out – A crucial step, I think that should be documented somewhere, or maybe I am just dumb.

At any rate, A thousand thank you's, sir.

R

Subject: Re: [BCD536HP] Faulty SD card?

OK. With it still in the card reader, does it show in Sentinel?
If so, use the CLEAR USER DATA option on that drive.

Joe M.

3013. Re: [BCD536HP] Faulty SD card?

Yahoo group: BCD536HP
Date: 2016-05-16 01:58:32 UTC
From: MCH
Topic: 2989 Message: 3013

Well, it should work in the scanner, but some PCs apparently don't recognize the newly formatted card. Not sure why that is, but it is.

Regardless, glad you got it working.

Here is another tip: If you ever want to update the firmware, you can even do that from the card reader, too. The firmware will write to the card then that will write the scanner when you attach it. You can even use that for multiple scanners to update the firmware.

And no, it will NOT transfer any upgrades you have purchased. (such as Extreme or ProVoice)

Joe M.

3014. RE: [BCD536HP] Faulty SD card?

Yahoo group: BCD536HP
Date: 2016-05-16 02:19:04 UTC
From: Radiotronic Gizmo
Topic: 2989 Message: 3014

I did write my HP file that I had saved. I had the Pro Voice upgrade on it. It seemed to transfer to the new SD card just fine.

That is: I did the clear user data while the card was in the external reader/writer.

Then I put the card in the HP. Powered it up and choose mass storage.

Opened the saved HP file and wrote to scanner (write to SD card). Turned the power off and then back on and selected serial.

Did the pro voice just fine.

Thanks again,

R

Subject: Re: [BCD536HP] Faulty SD card?

Well, it should work in the scanner, but some PCs apparently don't
recognize the newly formatted card. Not sure why that is, but it is.

Regardless, glad you got it working.

Here is another tip: If you ever want to update the firmware, you can
even do that from the card reader, too. The firmware will write to the
card then that will write the scanner when you attach it. You can even
use that for multiple scanners to update the firmware.

And no, it will NOT transfer any upgrades you have purchased. (such as
Extreme or ProVoice)

3015. Re: [BCD536HP] Faulty SD card?

Yahoo group: BCD536HP
Date: 2016-05-16 03:03:53 UTC
From: MCH
Topic: 2989 Message: 3015

The upgrades are written in the scanner itself. In theory, you should never lose them when you update firmware or change the card.

The only time people have "lost them" was when Uniden replaced their unit. Even then, people only had to re-enter the code and they had the upgrade back since the ESN of the replacement unit was changed to match the original.

Joe M.

3016. Re: [BCD536HP] Faulty SD card?

Yahoo group: BCD536HP
Date: 2016-05-16 03:08:39 UTC
From: MCH
Topic: 2989 Message: 3016

I should add that the below 'loss' only affected 436s, not 536s.

Joe M.

On 5/15/2016 11:03 PM, MCH mch@... [BCD536HP] wrote:

From: N1CHU
Topic: 2989 Message: 3017

Agreed, time to get a new card.

Thanks,

Bill

Joe M,

New SD Cards installed... But I had to format them AND install what Sentinel needed to see on the computer... and then install in the scanner. The scanner would not leave that screen that tells you to do the data dump until it recognized the new card I guess. So I first accessed the Card using my computer with Sentinel and installed what Sentinel needed to see residing on the card. Upman says it can all be done from the scanner-I do not doubt him, I just must have missed a step doing it his way.

All is well so far, but letting it run a day or two and see if it's listening to all I programmed. Checked the services and avoids to be sure I haven't got stuff locked out.

Bill

I'm looking forward to taking advantage of the intro price. Just one question... Is that $50 intro price good for my two BCD536HP's and one BCD436HP? (One mobile, one base and one portable equals three radios but only one user...) Or, do I need to purchase three upgrades?

I did not bother with the previous upgrade purchase because I have no systems in my area of interest. But I'm guessing the DMR program will follow the same process? Just don't know what it is.

Bill

$50 each radio if I read it correctly. Uniden has to pay a fee for each radio licensed.

It's a per-unit upgrade. $50 each.

I think uniden is going to price their self out of the scanner market with things like this. Some Chinese group will come up with a scanner that will do them all for about 1/2 the cost of the bcd536hp. Look what AOR did with the DV1, it's expensive, but it works pretty good.Just my 2 cents work.

Ralph

"Can you 'splain that, Lucy?"

Uniden is going to price themselves out of the market because
someone else can do the same thing or less for twice the price?

I'm definitely missing something in that logic flow.

I kind of agree. $50 is somewhat expensive, when I can buy a MD-380 for
just over $100 that does DMR, and transmits.

Isn't TRBO open source?

There are also firmware that needs licensed, not too mention vocoder, etc....it all adds up. So....I'd say you are getting a good deal for even $100.
Oh, and don't forget, those guys who do the firmware have to eat too..

Yes, a 380 does DMR xmit & receive, but that's all. I like a scanner that can listen to the different modes. It saves on batteries, only turning on portables when you wish to xmit. I just hope I live long enough to see a scanner that will do all currently listed plus DStar, Fusion and DMR!

Bill

Well, I suppose I could spring for three radios... Wouldn't want those firmware author's kids to go without dinner!

Thanks for the answer to my question-didn't mean to start a grumble session over the cost!

I was thinking the same thing on that one. And not only twice the price, it doesn't even do trunking at all.

So twice the price for half the product.

And those Chinese companies pay practically zilch for labor. They would still have to pay the other fees for licensing. Still be around the same cost so I don't see Uniden pricing themselves out of anything.

No, TRBO is not open source. That's why Motorola is the only
radio that has it, and you're not going to buy one for $100 new.

There is an answer for that, but I don't want to get sued for defamation
(even though what I would say would be true). ;->

Not all SW is completely licensed. That's why DSD is also anonymous.

BTW, there was a popular program to circumvent the copy protection on
DVDs... at least there was until a couple months ago when the
authorities caught up with them.

From: MCH
Topic: 3019 Message: 3038

YES - TX and RX in one band - on one digital mode - with limited channel scanning - and no TRBO trunking.

I have three DMR radios. I would love to carry one that supports all modes and TX. Of course, the scanner isn't going to TX, but it is closing the gap.

MotoTrbo is proprietary. Does your MD-380 do trunking? DMR is open
standard, but I don't believe it's open source. Even if it is, various
manufacturers modifications and upgrades aren't.

Topic: 3019 Message: 3040

i think these scanners are expensive to begin with. the DMR upgrade should be free.this is getting as bad as anti-virus software and other pay for use services.i know the chinese didn't pay full rights for DMR in the radios they make.
count me out of any of these so called UPGRADES. $450 to $500 per radio is more then enough. i have several BCD536HP
 ka3ffy IC-7000 IC-V8000 IC-208H RT-D8900 IC-CYF221S(440) HR-2600 TS-430 IC-F121 IC-F221 IC-F621-2 IC-F6021 many more
wqwv350 IC-CYF221S(GMRS) IC-F221
xyb3529 DX-959 BC980SSB many others
SCANNERS UNIDEN: BC245XLT BC898T BCD996T BCD536HP(2) BC350C BC350B COBRA: PF-1 SR-900

From: Radiotronic Gizmo
Topic: 3019 Message: 3041

The red fox is still on the air :) they got shut down, but just popped back up

The RedFox Project

The RedFox team consists of former SlySoft developers and staff members who were left without a job after the company was forced to close down for good on February 22nd, 2016.

It looked like the fox would be gone for good as its burrow ceased to exist with SlySoft.

Being left without any infrastructure and nothing but our forum still running, we were about to give up. After the shock wore off we considered our options and the overwhelming support of our community convinced us to pick up the pieces and continue the development.

Subject: Re: [BCD536HP] Re: DMR Upgrade Coming

There is an answer for that, but I don't want to get sued for defamation
(even though what I would say would be true). ;->

Not all SW is completely licensed. That's why DSD is also anonymous.

BTW, there was a popular program to circumvent the copy protection on
DVDs... at least there was until a couple months ago when the
authorities caught up with them.

If you can convince DVSI and Motorola to license their
proprietary schemes for free, you might have a point.

I don't agree that someone else should
have to pay for something you want.

I will also note that the only other DMR receiver (AOR)
is twice the price, and does not even include trunking.

The major costs are licensing to DVSI and Motorola. The Chinese aren't going to get around that.

So, the AOR is more expensive and has less functionality than the Uniden scanners and you think that's a good marketing strategy?

On 5/16/2016 19:18, Ralph Queener aj4g@yahoo.com [BCD536HP] wrote:
> I think uniden is going to price their self out of the scanner market with things like this. Some Chinese group will come up with a scanner that will do them all for about 1/2 the cost of the bcd536hp. Look what AOR did with the DV1, it's expensive, but it works pretty good.Just my 2 cents work.

$50.00 per radio, not per owner.

Subject: Re: [BCD536HP] Re: DMR Upgrade Coming

MotoTrbo is proprietary. Does your MD-380 do trunking? DMR is open
standard, but I don't believe it's open source. Even if it is, various
manufacturers modifications and upgrades aren't.

Sorry - I meant DMR. DMR and TRBO are the same thing, right? Vertex and a number of other manufacturers have TRBO / DMR radios.

True, but you can always DIY trunking, just add each channel and have it scan :)

Phrunking? :-)

BTW, that's the way I scan some systems. It works for low
use systems, but the more users there are the worse it works.

I also forgot my VHF DMR portable - that makes 4 for me.

It will be sooo nice to be able to scan more than 16 channels.

The Chinese aren't getting away with anything... At least not for long. If they fail to honor US regulations and restrictions they don't get FCC certification. If they ship anyway, those proprietary issues will end up in embargo land. No one in the US is going to place bulk orders for stuff the authorities are going to confiscate.

I kind of agree. $50 is somewhat expensive, when I can buy a MD-380 for just over $100 that does DMR, and transmits.

Isn't TRBO open source?

"Can you 'splain that, Lucy?"

Uniden is going to price themselves out of the market because
someone else can do the same thing or less for twice the price?

I'm definitely missing something in that logic flow.

Wow! I woke up to 40 emails from the group today! All dealing with this DMR upgrade. I can't take the credit for starting a very large round table discussion however... my question concerning if the intro charge of $50 applies to each single radio or each single user has been answered-$50 per single radio. And if I didn't ask I'm sure someone else would have!

...enjoying the input and learning a lot!

Bill

Phrunking? :-)

BTW, that's the way I scan some systems. It works for low
use systems, but the more users there are the worse it works.

I also forgot my VHF DMR portable - that makes 4 for me.

It will be sooo nice to be able to scan more than 16 channels.

3059. RE: [BCD536HP] Faulty SD card?

Yahoo group: BCD536HP
Date: 2016-05-17 11:54:49 UTC
From: N1CHU
Topic: 2989 Message: 3059

I see I'm not the only one having the issue of the new (factory formatted) SD Card not being recognized in the scanner. The reason, Sentinel has not yet placed what it wants to see on the card and doesn't recognize it. (Upman says it IS possible to give the new card what Sentinel wants to see while mounted in the scanner, and although I don't doubt this, I haven't found what it is I missed. Truthfully, I didn't spend any time looking for how to do this... Instead, see below...)

My workaround was to first mount the new card in my computer and run the Sentinel software following Upman's instructions. The software not only dumps any data, it also installs recognition data the scanner can read. I then place the card in the scanner and continue on with loading my FL's. A new, clean SD Card, formatted with Sentinel instructions, ready for use, is a wondrous thing!

Hope this helps,

Bill

Any SD will do, but some have reported better long-term results with Class 10 cards. Not sure if the additional is worth the $.
They come formatted.
In Sentinel, select "Clear User Data" and check the "show all drives" box, then run that function on the card. It will put all the necessary files onto the card for the scanner to recognize it (you can do this with the card in the scanner...just be sure to select Mass Storage mode on boot-up). UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Hi Gary, thanks for your input. Is there a particular type of 4GB micro SD card I should buy? Does it have to be reformatted first? Do that on a PC? Once installed do I just go to Sentinel and download the updated database and all my favorite lists that I had previously created? Thanks again, Gil

It's an SD card issue. I had the exact same thing and fixed it by
replacing the SD card. I originally formated and reimaged the card and
that fixed the problem for a few days, but then it started again.

Try a different card.

When using the Centinal software,I am adding the Lake County Public Safety,Indiana. or any P25 System,Phase I or II. Upon downloading to the scanner,I do not receive anything at all,no even a noise or nothing. I can receive EDACS systems,Conventional,these seem to work. Using the Zip code and or the discovery,setting to Trunking after loading the Database,nothing comes in at all???? I do not touch any setting using Centinal,tried to manually program either the P25 or the Project 25 Phase II TDMA settings for trying to receive any digital talk groups absolutely nothing at all ZIP ZERO. I sent it to Uniden,on the repair order they did a Battery Modification,and it was written that they tested in their area for the Trunking and or the P25 systems without failure,but I cannot get this thing to work on any digital anything.
Am I doing something wrong with the Centinal software,I just load my favorites,set the FL quick key and the FL tag number,tried a few times to shut the location on or off,set the range to 50 miles,even tried setting the quick keys on some of the departments to see if it would make a difference.To sum it up,the Zip code works but no digital,the Trunking discovery works with conventional,no digital,I am having no luck,any one have a suggestion,or can I ship it to you and see if you have any luck,or pick up,I am in Cedar Lake Indiana.This is frustrating,this is suppose to be easy to program,my BCD996XT picks up the Phase I digital without any issues.Thank you in advance,really need some help,I love this scanner,if I can get it to work,Thank you,Mark B.   The Chinese aren't getting away with anything... At least not for long. If they fail to honor US regulations and restrictions they don't get FCC certification. If they ship anyway, those proprietary issues will end up in embargo land. No one in the US is going to place bulk orders for stuff the authorities are going to confiscate.

Motorola can't go after them because they are not infringing
on the TRBO license (since they don't support TRBO).

Subject: Re: [BCD536HP] Re: DMR Upgrade Coming

well. most of the chinese radios are NOT FCC certified. they sell them direct.

many are sold under ham radio which does not require FCC cert's.

then again. will motorola go after them? or can they go after them. many are sold out of china. sent directly to americans. time will tell

ka3ffy IC-7000 IC-V8000 IC-208H RT-D8900 IC-CYF221S(440) HR-2600 TS-430 IC-F121 IC-F221 IC-F621-2 IC-F6021 many more

The Chinese aren't getting away with anything... At least not for long. If they fail to honor US regulations and restrictions they don't get FCC certification. If they ship anyway, those proprietary issues will end up in embargo land. No one in the US is going to place bulk orders for stuff the authorities are going to confiscate.

3068. RE: [BCD536HP] Re: DMR Upgrade Coming

Yahoo group: BCD536HP
Date: 2016-05-18 04:36:35 UTC
From: Radiotronic Gizmo
Topic: 3019 Message: 3068

Well the loophole is, to be sold has ham radios, they need the FCC cert, but hams are allowed to build or modify radios.

The radios are sold as ‘business band’ radios (which also require a license), but the software ‘breaks’ the business freqs and allows you to program

Ham freqs in them making it all perfectly legal – as long as you have a amateur radio FCC license - I notice most ads on amazon, etc, fail to mention the licensing issue

Either for hams bands or business freqs.

I have tried a few of these cheapo Chinese knockoffs – handhelds and mobiles. They are worth what you pay for them, and I have gone back to Kenwood/Yeasu, etc.

They require Part 15 cert. They do not require
Part 90 cert which many people believe they do.

3069. Re: [BCD536HP] Re: DMR Upgrade Coming

Yahoo group: BCD536HP
Date: 2016-05-18 04:44:53 UTC
From: MCH
Topic: 3019 Message: 3069

For commercial bands, Part 90 (or similar) Type Acceptance is required.

I think it's quite the opposite - they are sold as ham radios and many
people use them in the commercial bands. While some have Part 90 TA,
some do not and are illegal to use there.

But, as this is not a CCR list, let's continue elsewhere please.

From: N1CHU
Topic: 3019 Message: 3070

Thanks for pointing that out Joe M. It's time this list gets back on topic... Not debating FCC certs and Chinese ham gear.

Bill

3071. Phase II issues

Yahoo group: BCD536HP
Date: 2016-05-18 11:30:01 UTC
From: N1CHU
Topic: 3071 Message: 3071

Two issues;

Are there any "tweaks" I can do to adjust for audio quality when listening to Phase II? My home BCD536HP, although receiving the two Phase II systems close to me, I hear them weak. I get a warbling audio. I run an outside antenna and have no problem hearing the simulcast P25 systems, which both systems continue to operate. Both systems will run audible tones to alert the FD pagers (which acts like a tone generator for my purposes here). And what I hear is not a continuous clean tone. But the older P25 systems are heard perfectly. One system is from an adjacent town, the other about 10-15 miles away. While in the mobile, and either inside the town limits or close, the two towns running Phase II perform nicely. (Which gives me the impression the Phase II systems are running less power? Which may or may not be the case... I don't know.)

I believe Phase II systems loose something when compared to the P25 systems, power and antenna being equal, relating to range... A characteristic of the animal I guess. But the little experimentation I have done with the settings on the 536 have come to no avail. Since I am not all that versed on exactly what the settings do, I thought a post here might help to better understand.

The other issue I've noticed is I can not totally eliminate the audio level on Phase II systems by turning down the volume all the way. I do not experience this on any other modes. And if I can be allowed a guess, I will also see this occur when DMR is introduced, Phase II and DMR both being TDMA, very similar in operation.

I just dropped $150 for 3 DMR keys (two 536's & one 436). I live in Ct. I am interested in monitoring Skywarn. Ct. Skywarn people have adopted DMR and jumped onto the Ct. State Police P25 system, DMR being compatible with the CSP P25 system. Skywarn DMR has statewide comm capabilities and as soon as all have purchased their personal DMR ham radios, they will probably use DMR exclusively instead of various VHF/UHF ham repeaters. And I can monitor them on the scanner I happen to have with me at the time. And while it's true, I could have purchased a TYT 380 portable DMR ham radio for slightly less, I don't have to carry two radios. It all boils down to personal preference and how much free coin we have in our pockets! I'm still debating as to wether I tell the wife or not...

Any help on the tweaking is appreciated...

Bill

Remember - they are putting the data for two signals on the same bandwidth, so you're only going to have half the quality.

Even on the Motorola radios, constant tones sound digital.

DMR is not compatible with P25. They likely have a patch between the systems. If the two were compatible, you would have been hearing DMR ever since the radios were introduced.

Joe M.,

What I meant by compatibility is that Phase II and DMR are both TDMA. And Motorola can upgrade from a Phase I (FDMA) system to a Phase II (TDMA) system piecemeal, allowing both system's gear to talk to and hear each other. In the case of the Ct. State Police, when it comes time to replace radios, they don't have to replace the entire system all at once. Once they get the Phase II infrastructure in place, that is... They can swap out the old for the new in smaller batches, one Troop at a time for example.

Ct. Skywarn DMR infrastructure is currently in place on the CSP system and performing brilliantly. Skywarn DMR uses all CSP backbone infrastructure, microwave connectivity and xmit sites, etc. with the possible exception of the hilly western/north western part of the state, Skywarn is enjoying statewide coverage. (CSP still runs some older VHF low band mobiles and "rat paks" (mobile repeaters that use VHF high band portables to link with the old VHF low band mobiles) as they have better low band coverage than on the 800 MHz trunked freqs.

Hope I answered that confusion. If not, wondering what I missed...

Bill

Spentinel,

I'm in central Indiana.
But first make sure all service types you want to hear are selected. Second make sure you have your Favorites List set to monitor. Third make sure to send the file to the scanner and select "Erase Favorite List". When it asks if you are sure hit yes and let it write to the scanner.

You don't specify what system you are wanting to monitor, but if you have one that says "E" instead of "T" it's encrypted and cannot be monitored.

John

3076. DMR Locator Spreadsheets

Yahoo group: BCD536HP
Date: 2016-05-20 16:25:35 UTC
From: Uniden UPMan
Topic: 3076 Message: 3076

I created a couple of spreadsheets over the past few days that can help you find undocumented DMR frequencies in your area. The two sheets consist of all Fixed base frequencies with Emission 7K60FXE in the FCC (1) Private Land Mobile Database and (2)Commercial Land Mobile Database. I'll add one, hopefully later today, for those in the Commercial Land Mobile Database.

EM_Private_Query.zip

See the instructions at the top of the sheets. Warning: The PLM database resulted in a HUGE SHEET! Do not try to sort the columns, as it will just lock up Excel. Instead, use the Filter as I describe.

At my current location, there are nearly 1000 DMR licensed frequencies meeting the above criteria within a 20 mile range.
UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

John,everything is turned on,I do erase the favorites when I retry the installation of the systems,I am trying to load the Lake County Public Safety,Project 25 Phase II,APCO-25 Common Air Interface Exclusive.The channels I want to monitor has a T for the TDMA system.I am positive that all is turned on,Quick keys,Monitor lists are on,not once have I seen the P25 symbol show up on the screen.The Conventional and the Motorola systems work,put cannot notice or see any P25 systems working.It is marked as P25 Trunk on Centinal,so I assume it is sending it OK,I have all the control channels on the scanner,as I checked,all the Police and Fire are there with their DEC numbers.I also add a quick key to the frequencies in the options,not sure if I am to do this or not,but I may try to not and see what happens. If at all possible,I can send you my SD cars and have you program it and then I can see if it will work,drawing straws,or I may have to send it back to Uniden,they told me it was OK,they said they compared it to their P25 and Trunking and worked OK,along with some Battery Modification?.Or I can send the scanner to you,paid both ways and you can try it out for me,I am a trusting person.Thanks John,any more ideas or suggestions..LOST,Mark,,KB9GTB

Thanks Paul! Do you (or anyone else on the list) know if the consumer no-license DTR550/DTR650 900 MHz radios are DMR? I'm mainly interested in the DTR650 which shows as "8-Level FSK 900 MHz ISM FHSS" as their modulation specs. The DMR upgrade may or may not cover the frequency hoping, but I hoping that I would at least be able to receive the transmissions if I were using close call.

Thanks,
Dewey

I created a couple of spreadsheets over the past few days that can help you find undocumented DMR frequencies in your area. The two sheets consist of all Fixed base frequencies with Emission 7K60FXE in the FCC (1) Private Land Mobile Database and (2)Commercial Land Mobile Database. I'll add one, hopefully later today, for those in the Commercial Land Mobile Database.

EM_Private_Query.zip

See the instructions at the top of the sheets. Warning: The PLM database resulted in a HUGE SHEET! Do not try to sort the columns, as it will just lock up Excel. Instead, use the Filter as I describe.

At my current location, there are nearly 1000 DMR licensed frequencies meeting the above criteria within a 20 mile range.

No - they are not MotoTRBO. They're another simplex form of digital communications - and are Frequency Hopping Spread Spectrum to boot which is similar to how WiFi works.

In Motorola radios - if they support MotoTRBO they'll say "MotoTRBO" in the specs and TDMA somewhere. Those DTR radios are NOT TDMA.

John,everything is turned on,I do erase the favorites when I retry the installation of the systems,I am trying to load the Lake County Public Safety,Project 25 Phase II,APCO-25 Common Air Interface Exclusive.The channels I want to monitor has a T for the TDMA system.I am positive that all is turned on,Quick keys,Monitor lists are on,not once have I seen the P25 symbol show up on the screen.The Conventional and the Motorola systems work,put cannot notice or see any P25 systems working.It is marked as P25 Trunk on Centinal,so I assume it is sending it OK,I have all the control channels on the scanner,as I checked,all the Police and Fire are there with their DEC numbers.I also add a quick key to the frequencies in the options,not sure if I am to do this or not,but I may try to not and see what happens. If at all possible,I can send you my SD cars and have you program it and then I can see if it will work,drawing straws,or I may have to send it back to Uniden,they told me it was OK,they said they compared it to their P25 and Trunking and worked OK,along with some Battery Modification?.Or I can send the scanner to you,paid both ways and you can try it out for me,I am a trusting person.Thanks John,any more ideas or suggestions..LOST,Mark,,KB9GTB

Mark, I can try and work up a file this weekend and send it to you and see if that works. No need to send the cards, just copy what I make up and see if it works.

John

John we can try that,my e-mail is whyme505898@comcast.net,this is my priority e-mail,or send it through this site,which ever works best for us and you.I have one question,with the TDMA system,that my area is in Northwest Indiana,Lake County Public Service,do I need the Uniden ProVoice for my area??I am curious if ProVoice will make a difference in my monitoring of the locals,Cedar Lake,Crown Point Merrillville ,I have noticed one Cedar Lake channels comes through,and it has REPEATER on the screen,and I can get a local town Schererville come through,and that is tagged T also,the only one that comes through. One thing I noticed,some of the channels I want to monitor,at the bottom of that page are highlighted in a pink shade,not sure what that means??
But John,if you have a idea for me to try,can we give it a try,my wife is getting sick of me complaining about this scanner not getting it to work for me,she tells me to get the ProVoice and see if this will make a difference???If you do not mind trying to help me out,GREAT,I will try anything before I may purchase the ProVoice and try it out? What I want to monitor is the Lake County Public Safety,Here it is.Also,something about TDMA modulation???Assuming this is just a Phase II system.

System Name: Lake County Public Safety Location: Countywide, IN County: Lake System Type: Project 25 Phase II System Voice: APCO-25 Common Air Interface Exclusive Last Updated: May 15, 2016, 3:58 pm (Updated Function Tag assignments for 3 talkgroups
http://www.radioreference.com/apps/db/?sid=8384&tab=reports#history
Some talkgroups on this system are using Project 25 Phase II TDMA modulation which can ONLY be monitored using a P25 Phase II compatible scanner

Thank you very much John,when you find time,don't go out of your way for I,do your chores first,then worry about me,hope to hear from you soon,and hope we or you can figure this out,,,Take it easy,Mark,,KB9GTB

ProVoice won't help on the Lake County system at all. ProVoice is a different type of system all together.

Some questions:
1: how far are you from system towers?
2: anything blocking you? Anything like buildings, trees, etc that could block the signal will keep you from hearing things.
3: what kind of structure are you in? Does it have aluminum/steel siding or roof? Does it use Tyvek under the siding?
4: have you tried placing the scanner in different areas? Like near a window on the side the tower is?
5: have you tried taking it outside on an extension cord to see if it receives better in any place in the yard?

Any of the above can affect reception!
Any questions you can call me 765-969-0492 as that may be quicker.

From: N1CHU
Topic: 3086 Message: 3092

The BCD435HP & BCD 536HP have clocks... They tell time. Some of these clocks would stop working properly. This resulted in getting a warning/error message instructing you to reset the time each time the radio was turned on. Uniden researched the issue and upon finding a solution, set up a free repair process which also included free shipping both ways. This repair process would have you register with the Uniden repair shop and they would notify you when they could provide a quick turnaround. 3 weeks was mentioned.

Check this group for a posting by Paul Opitz. In his Uniden email address calls himself Upman. Upman has a recent post with a hyperlink that will take you to a website explaining more... Just do a search for Upman inside the BCD536HP Yahoo groups.

Thanks for the reply. Yes there have been several recent posts that tell you what to do IF you have a clock problem, but none that I can find that tell you what that problem is. If you switch off the radio and then later turn it back on, but never remove 13.8VDC from the radio – does it go away?, if you remove the 13.8 VDC for a certain amount of time, the clock looses its mind? Or is it that while you are merrily scanning away, the clock goes batshit crazy and reports timezones from various planets in the galaxy? I thought it was weird that the repair site at Uniden doesn't say "IF you radio exhibits the following behavior, you may be the lucky winner, in which …."

I dunno – anyway, I appreciate a reply – I hate it when a request goes out into the ether and disappears into the nether regions you never hear of it again.

So, again, thanks for the reply

The BCD435HP & BCD 536HP have clocks... They tell time. Some of these clocks would stop working properly. This resulted in getting a warning/error message instructing you to reset the time each time the radio was turned on. Uniden researched the issue and upon finding a solution, set up a free repair process which also included free shipping both ways. This repair process would have you register with the Uniden repair shop and they would notify you when they could provide a quick turnaround. 3 weeks was mentioned.

I thought I would mention my 536 after 2 years started shutting off after 30 min. Paul said to replace my micro card. I put in a new SanDisk 16Gb ultra disk, $ 11. at Wamart. I just downloaded the database and my favorite lists from Sentinel and it works perfect. What I also noticed in the past every time I turned on the radio it asked me to set the clock, now the time is always there and it goes directly to scanning my favorite lists. GIL

The scanner should hold the time when it's powered off. If your scanner has the problem, it will lose the time when the scanner is turned off for even a brief period of time.

The battery should charge as long as it's powered on.

What causes the clock issue? Does it go away if power is removed? The Your questions were asked before and I seem to recall the answers the was rather vague. I don't recall if it was answered by Uniden or not but there was plenty of discussion on this group. And if I remember correctly, different radios may have exhibited different symptoms. If and when it happens to your radio, you can try testing out those questions and answer them yourself. Suffice to say Uniden will repair at no cost should this problem occur.There also is/was another issue with dimming displays that were being fixed at the same time. In that case the LED's were replaced.

Subject: Re: [BCD536HP] Clock question

The BCD435HP & BCD 536HP have clocks... They tell time. Some of these clocks would stop working properly. This resulted in getting a warning/error message instructing you to reset the time each time the radio was turned on. Uniden researched the issue and upon finding a solution, set up a free repair process which also included free shipping both ways. This repair process would have you register with the Uniden repair shop and they would notify you when they could provide a quick turnaround. 3 weeks was mentioned.

Check this group for a posting by Paul Opitz. In his Uniden email address calls himself Upman. Upman has a recent post with a hyperlink that will take you to a website explaining more... Just do a search for Upman inside the BCD536HP Yahoo groups.

John,I did notice one thing,when I check the CUSTOM 1 on the Centinal software,send the favorites to the scanner,upon reviewing the settings on the scanner,I noticed that CUSTOM 1 is not turned on,in either the Service button or the MENU then Select Service SYS,it is not turned ON in either of the settings.I tried to turn them on,but nothing seems to work trying to turn the Custom 1 on the scanner<<<<Any ideas,this may be a problem,if it is to be turned on,on the scanner,it is check marked on the PC Centinal software but not on the scanner.I will try a few things,I do not know why it did not set it ,when its checked on the PC Centinal,,,I will let you know what I find out after I get done messing with it,it may be a few,I have to get going and get my chores done,have to get my small garden in before the rain,and my dad needs help gutting down a few small trees,will keep in touch John,,Mark

The multiple software issue may have a hand in what we are experiencing but I've only used Butel so far. If course I start off with Sentinel first. What I'm going to do is go back to basics, build a FL using Sentinel and write to the scanner AFTER I have done a factory reset. I'm going to let that play for a few days and get a feel of how much traffic there is. The. I'm going to read the scanner using my Butel programming software, save it to the computer, and look for differences between what Sentinel loaded and what Butel sees. (I may also try creating a Butel FL and read it using Sentinel. My guess before starting is there will be no differences. Nice to check anyways. And after that it's just a matter of tweaking the FL (making editing changes) numerous times to see if I come up with a delta that explains why the radio is behaving as it did BEFORE I installed fresh new SD Cards. All this if and when I get time. Currently running a BCD996XT at the same time as the BCD536HP... No definitive differences I can point a finger at.

From: Uniden UPMan
Topic: 3106 Message: 3106

For anyone who has been using this, I have yet another version. Actually 2 versions in one file.
Version 1 is xlsx without macros, but just combines the two lists that were in the earlier version.Version 2 is xlsm with macros. Also combines the list, but implemented the frequency list generation in VBA which is blindingly faster. A few seconds to list all 1000+ matches in a 20-mile radius vs several minutes (or never) with the xlsx version. If you aren't afraid of excel sheets w/macros use this one.

Just a question of information, I was wondering if you know how to do a factory reset on a 436? I received it back with a new card and lost my favorites list on the scanner. I am having trouble trying to reinstall my favorites list doing a write to scanner function, it won't let me as it seems to freeze up and the windows circle just keeps going round and round, not connecting, no dialogue box like normal. Never had any trouble updating my FL before when I added things. Very confused. The tech I talked to did not know why the original card was not copied onto the new card and sent me a list of things to do. Do I got into the Sentinel and delete the whole FL and star over from scratch?

Thanks,Tom (raidertom@...)

John,hello,I had been using the BCD996XT scanner for a while,until one day I turned it on,with coffee in hand and nothing would come over the scanner on morning.I let it run,checked the setting,no one mess with it,and found out from my daughters boyfriend who is a fire fighter,paramedic that they changed their system over to the new Phase II system.Well,then I had to purchase a updated scanner,so I bought one and he I am,stuck trying to receive fire and police. When using Centinal software,all I do is put my area in the favorites list,I go to Edit Favorites list,go to Options,set my Quick keys,I turn the location on,do my Number Tags on everything I have in the lists.SAVE and EXIT....
Then I go to Edit Profile,make sure monitor and download are ON,check Monitor Full Database,then go to Service Types and check almost all of them,make sure CUSTOM 1 is checked,then Location Setting,add my Zip code,set the range to 50 miles,Baud rate is at 4800bps,GPS set at DMS,but I have no GPS hooked up so I leave it alone,make sure all the quick keys are checked.
Then I go to Scanner,clear users data,OK,then I make sure the updates are up to date,make sure all os good on updates,Then I go back to Scanner,write to scanner,I check erase favorites list to start over,and write to scanner.I either go directly to the scanner or I use a Micro SD adapter card and write to that,and insert the SD card into the scanner,I use either,depending on the mood I am in.
So I make sure Monitor and Download is on,Set the Mile range,Custom 1 is checked,and is the 4800 BAUD RATE,that I believe is the setting,and the GPS option Format is set to the DMS,,,not DEG setting,I have NO GPS on the scanner,range is set to either 30 or 50 miles.What I want to listen to is only 2 to maybe 12 or maybe 17 miles away,I pick up some things on the install your ZIP CODE from Chicago,Cook County area.Even installing my own Zip code or use the DISCOVERY on the scanner,I cannot pick up anything around my area,I figured using the Trunking Discovery I would pick up the digital near me,NOTHING at all,quiet,no Chicago or near by county's.John,from what I explained to you and all,am I missing something or am I doing something wrong,anything with the bps settings??I still cannot get my area to work,if you still want me to ring you,let me know,going to be busy for the next few days,may have to find a morning time to call you,Thanks again,read this over,am I missing something???Set something I am not to,like no GPS???Talk soon,Thank you for your time John,I want this working,crazy electronics,,Mark

"queenhorserider@... [BCD536HP]" <BCD536HP@yahoogroups.com> wrote:

John we can try that,my e-mail is whyme505898@...,this is my priority e-mail,or send it through this site,which ever works best for us and you.I have one question,with the TDMA

system,that my area is in Northwest Indiana,Lake County Public Service,do I need the Uniden ProVoice for my area??I am curious if ProVoice will make a difference in my monitoring of the locals,Cedar Lake,Crown Point Merrillville ,I have noticed one Cedar Lake channels comes through,and it has REPEATER on the screen,and I can get a local town Schererville come through,and that is tagged T also,the only one that comes through. One thing I noticed,some of the channels I want to monitor,at the bottom of that page are highlighted in a pink shade,not sure what that means??
But John,if you have a idea for me to try,can we give it a try,my wife is getting sick of me complaining about this scanner not getting it to work for me,she tells me to get the ProVoice and see if this will make a difference???If you do not mind trying to help me out,GREAT,I will try anything before I may purchase the ProVoice and try it out? What I want to monitor is the Lake County Public Safety,Here it is.Also,something about TDMA modulation???Assuming this is just a Phase II system.

System Name: Lake County Public Safety Location: Countywide, IN County: Lake System Type: Project 25 Phase II System Voice: APCO-25 Common Air Interface Exclusive Last Updated: May 15, 2016, 3:58 pm (Updated Function Tag assignments for 3 talkgroups
http://www.radioreference.com/apps/db/?sid=8384&tab=reports#history
Some talkgroups on this system are using Project 25 Phase II TDMA modulation which can ONLY be monitored using a P25 Phase II compatible scanner

Thank you very much John,when you find time,don't go out of your way for I,do your chores first,then worry about me,hope to hear from you soon,and hope we or you can figure this out,,,Take it easy,Mark,,KB9GTB

This is great, thanks. Now I can see the scanner displays the color code, frequency and type of system (Cap+, Con+, conv DMR) the DMR channel belongs to.
I believe Rich asked this question in another thread. When scanning for DMR channels and the scanner finds one for a Cap+ or Con+ system, how do you figure out what LCN the pair belongs do in order to determine the LCN order as well as what the system ID (at least for Con+ systems) the channel belongs to?
I use DSD+ quite a bit in my area but will use the 436HP when DMR is released. One of the things that is very helpful is DSD+ will display Site ID for Con+ along with the color code, slot number and LCN in the system so one can map out the LCN order after analyzing the system over time.
Unless I'm missing something, it would be helpful if the scanner also displayed the Site ID (for Con+) and LCN (i.e. Ch 1, Ch 2, Ch 3, etc.). I understand Cap+ doesn't broadcast a Site ID so determining those systems are likely to be more involved and difficult.

Seeing things pop up on the screen doesn't mean you don't have a week signal. A lot of times I see data like TGID but no audio due to a weak signal. And you can't judge the signal much by the meter bars either. It basically let's you know there is a signal. Try different locations and see if it helps. Try different antenna as well.

3115. ProVoice and DMR upgrades

Yahoo group: BCD536HP
Date: 2016-05-24 19:18:23 UTC
From: N1CHU
Topic: 3115 Message: 3115

Wondering about some of the terms I've seen in recent posts, mostly the DMR stuff. So I'm off to research this terminology. I figure RR is a good place to start. And will there be addendums to the owner's manual? (I figure the Nifty manuals will also be doing a newer version once the DMR upgrade is released).

Bill

I'll need to rely on you folks here in this group for this info, as I've been "Banned For The Greater Good" from the RR Forums (their phrase for the horrible things I've done).

3117. DMR Primer v1.0

Yahoo group: BCD536HP
Date: 2016-05-25 06:04:01 UTC
From: MCH
Topic: 3117 Message: 3117

I generally don't like cross-posting, but it seems appropriate.
This should also increase the "signal to noise" ratio on the list. :-)

Here is a summary of DMR for scanner enthusiasts. There may be the stray error or two, but it should be relatively complete and accurate. There may be items omitted. After a while, I will add anything posted as an update and put this doc in the FILES section. If you have an update, correction, or whatever, please post it to either list.

DMR has at least six flavors: (with a seventh imminent)

1. Simplex - This type is RF-wise the same as conventional analog simplex. The only significant differences are that the mode is digital, and the carrier is not constant. What this means is that it typically cannot be "heard" on most scanners unless you open the squelch while monitoring the frequency. Likewise, they will (in the vast majority of cases) not trigger a Close Call hit. These are both due to the rapid switching of the transmitter on-and-off. The transmitter only transmits half of the time, and the squelch action of most scanners will not react before the carrier is back off. fortunately, this is the only DMR mode (not counting inputs) that is so afflicted. The frequency, slot, and TGID used is programmed in the radio itself.

In theory, two simplex users can use the same frequency at the same time if the radios can hear each other for self-assigned timing. I have never confirmed this theory.

2. Duplex (Repeated Conventional) - This type is again like analog repeated except it is digital. Unlike simplex, the repeater outputs always transmit full-time - transmitting timing data for all users. This allows two users (one on each timeslot) at the same time. When two are using the repeater, that on slot 1 is instructed to transmit. While the repeater receives this data, the data from slot 2 is being forwarded out the repeater. Then the process reverses - user 2 transmits while the data from user 1 (that was stored) is transmitted out the repeater. The frequency, slot, and TGID used is programmed in the radio itself.

Conventional repeated can be easily heard on most any scanner in FM or NFM mode (technically, it is more narrow [7.6 kHz BW] than NFM [11.2 kHz BW], so that is the preferred mode to monitor). They can also be detected by Close Call. The input signal sounds like simplex and is like simplex in how it operates (no Close Call hits on the inputs unless you have two users within Close Call range using the system at the same time).

3. IPSC (Linked) Repeated - IPSC is Internet Protocol Site Connect. It is a simple linking of several conventional repeaters. Most ham networks use this mode (such as DMR-MARC). This mode operates exactly like

Repeated Conventional except that there is a 2-second burst that is transmitted every 30 seconds. This is a distinguishing characteristic of IPSC systems. IPSC can reportedly have up to 15 sites, but obviously you can link networks together as the ham community has done to link many more sites worldwide. The frequency, slot, and TGID used is programmed in the radio itself.

4. Capacity Plus (AKA Cap+) - This is a trunked mode. The trunking logic exists through a databurst on the "rest channel". This databurst signals which frequency and slot will be used next. When a call is made, it will show up on this frequency and slot and the databurst will move to the next slot (usually on the same frequency UNLESS that is busy). If both slots are in use, it will move to the next LCN on the first available slot. If there are no "next" slots, it moves back to LCN1 slot A (if available).

A distinguishing characteristic of this system type is the rest channel burst which will usually occur every 3 to 10 seconds (my experience is usually 3) and lasts only 50 mS or so. It's usually not enough to open the squelch on a scanner, but will show on the S-Meter if you are sitting on the frequency in squelched mode. If in open squelch, you will hear the gap in the squelch noise.

There can be up to 8 LCNs on a Cap+ system each supporting two timeslots (16 TGs can use the system at the same time). The color code is assigned PER LCN and need not be the same for all frequencies.

The TGID used is programmed in the radio itself. The frequencies and color codes are programmed in the trunk system information, and the LCN and Slot are controlled by the system.

Something I discovered recently is that if data is used on the same system, it will usually be assigned to the next LCN higher than the rest channel. This is likely to allow the databurst to continue uninterrupted. This can interfere with scanning a Capacity Plus system in conventional mode. The color code is still transmitted for the data LCN.

5. Linked Capacity Plus (AKA LCap+) - This is another trunked mode. I don't have much experience with this mode, but it is assumed it is a hybrid of Linked Conventional and Capacity Plus. Again, there is technically a 15-site limit.

6. Connect Plus (AKA Con+) - This mode is another trunked mode. It operates much like P25. You have a dedicated control channel (technically one slot on one LCN). This control channel is usually LCN 1 Slot A, but can be on any LCN and (assumed) on either slot. I've never heard it on any Slot B, but it might be possible. This control channel transmits continuously and sends LCN and Slot info for channel assignments to the user radios. There can be many linked sites in this system type and there are many multi-dozen site systems across the USA. This is the only mode that has the continuous transmit (which is the bane of co-channel users everywhere). Some system admins try to use old

paging channels for the control channel since they are often exclusive allocations within the same geographic area (unlike LMR channels). After all, they don't want interference with their control channels either.

Con+ can have up to 250 sites connected. Each site supports up to 15 repeaters. As one slot is used by the control channel, this allows up to 29 simultaneous TGs to use the system at the same time.

The TGID used is programmed in the radio itself. The frequencies and color codes are programmed in the trunk system information, and the LCN and Slot are controlled by the system.

7. Capacity Max. Not much is known about this mode yet, but it is Tier III compliant which means it should work across multiple vendors. This is available in single-site and multi-site variants. Linked Capacity Plus systems can be upgraded via software to this new flavor.

Encryption:

There is basic encryption (255 keys) and enhanced encryption (over 2 quadrillion keys - 40 bit). These may be employed on any flavor of DMR.

Also, encryption is typically not compatible between manufacturers.

Color Codes:

All DMR frequencies use Color codes which are akin to CTCSS for DMR. These color codes range in value from 0 to 15.

Slots:

As mentioned above, DMR is a TDMA mode that has two voice (or data) paths per frequency. Each frequency has slot 1 and slot 2, and each can be used by different users. On conventional, they are independently assigned. For trunked modes, they are assigned by the controller and each TG can use any slot on the system.

TGID:

TGIDs are essentially the same as any other modern trunking system. TGIDs are used on every DMR flavor including conventional duplex and simplex.

This ends DMR Cliff Notes version 1.0 for scanner enthusiasts. :-)

Questions?

3119. Brand New BCD536HP Set Up

Yahoo group: BCD536HP
Date: 2016-05-25 20:23:58 UTC
From: drosotherm_185@...
Topic: 3119 Message: 3119

Hi Everyone!! I just got a BCD536HP scanner. I took it out of the box and tried to set it up by setting the clock. I entered the data and pressed E. It started to process the information. Then it now says data was lost press E. I've tried to redo it but the scanner won't let me. Is there a way to reset data back to beginning?? I'm totally lost at this point. Please help thanks. JOHN

3120. Re: [BCD536HP] Brand New BCD536HP Set Up

3123. DIY Battery fix..

Yahoo group: BCD536HP
Date: 2016-05-25 22:55:00 UTC
From: SmokChsr
Topic: 3123 Message: 3123

My 536 is having the battery issue, but I really don't care to send it off for repair. I haven't ever opened it yet, but considering it's sitting above my radio service bench, I'd be curious to know if anyone is aware of what the fix is. I'm sure I could go in and find the battery and replace it, just don't know if there are other mods that need to be done.

3124. Re: [BCD536HP] Brand New BCD536HP Set Up

The problem is the scanner seems to be stuck in a mode that it will not respond to any key command on the scanner. It says it lost the clock settings. Press the E key to set it. When I did that it just kept cycling saying the same message about the clock. Pressing the buttons made no difference. I turned the scanner off. Unplugged it. Plugged it in and tried again. Same results. I'm at a loss here. I sent Uniden an e mail. I tried to call them at tge number in the owners manual. The line was busy. That's where I am at this point. Thanks

Maybe try connecting to a PC and use the CLEAR USER DATA in Sentinel?

Also maybe try leaving it powered for a while to charge the clock battery.

My understanding is the battery and IC are one, not a separate battery. They also replace the display LEDs which makes it soooooo worthwhile, at least it did for me.

It's a free repair and upgrade and warranty extension, why void the warranty and the benefits.

Presently the scanner won't connect to sentinel. It keeps coming on saying time settings were lost. It says to reset BUT the keys are not changing anything when pushed. Scanner is cycling on giving that message then going off then coming back on again repeatedly. It's currently plugged in to charge internal battery. Thanks for your help. JOHN

Do you have a MicroSD card adapter you can try? If so, remove the card from the scanner, put it in the adapter, then try the CLEAR USER DATA on it. It should show the same in the reader as it does in the scanner.

They also change the LEDs if necessary.

This is brand new. I contacted the seller to see what they will do. I actually would like to see the scanner replaced for a new one. I will let the group know the end result. I thank everyone for their help, feedback and advice. This is really a helpful group.

My 536 is having the battery issue, but I really don't care to send it off for repair. I haven't ever opened it yet, but considering it's sitting above my radio service bench, I'd be curious to know if anyone is aware of what the fix is. I'm sure I could go in and find the battery and replace it, just don't know if there are other mods that need to be done.

Re-format the sd card
follow the procedure that been outlined or perhaps someone can post it.

The problem is the scanner seems to be stuck in a mode that it will not respond to any key command on the scanner. It says it lost the clock settings. Press the E key to set it. When I did that it just kept cycling saying the same message about the clock. Pressing the buttons made no difference. I turned the scanner off. Unplugged it. Plugged it in and tried again. Same results. I'm at a loss here. I sent Uniden an e mail. I tried to call them at tge number in the owners manual. The line was busy. That's where I am at this point. Thanks

It's pretty simple click Menu scroll up or down to settings then set clock.

The fix is that they replace the entire "control board". Which apparently is the main board on the computer. It's far more than just popping in a new battery.

John,

It's been my understanding the dealer hasn't any idea what particular radio will or will not have this problem. Meaning even if the dealer replaces the radio with another, there is no guarantee you will be better off. But, Uniden has identified the fix and offers to correct the deficiency for free. And since it's not a quick fix (a battery swap out), it's the way to go. From what I can see, the only downside to the process is being without your scanner while it's being repaired. (Uniden says it's a 3 week turnaround. When you use their return process, they put your scanner in que and tell you NOT to send it in until they tell you to. That way, it doesn't sit in their shop awaiting it's turn to be fixed. They time it so when it shows up they can put it on the bench for the authorized fix immediately or almost immediately and ship it back to you.

Take it from those of us who know, have gone through the fix process... Simply getting another new scanner from the dealer is not going to satisfy you if that new one develops the same issues. (And to date, the end users, us, have no way of knowing which radios are affected.)

Go through the Uniden return process. It's really the path of least resistance. And yes, we all balked about having to return the radios... I didn't even get around to accepting the need to return for a month after my 3 radios started doing what yours is doing. I was too busy fuming over it.

Bill

Having trouble following the thread... Did John have any success?

I remember when I got my BCD396XT years ago... couldn't get it to play no matter what I did, or so it seemed... I even considered a medicine man or witch doctor, to remove the curse someone had placed on the radio, and actually considered using the plain brown paper bag method, whereby you place the radio in the bag, go out on the front lawn and swing it over your head, all the while screaming like a chicken!

Coming back to my senses, I called my buddy who stopped by and within a half hour had the thing up and running! It made me ponder my reluctance to ask for help from someone who I personally knew, out of fear they will never let you forget it! What I do recall is consciously discarding that option of asking for help, too proud to admit this new radio actually insisted on reading the manual first. Previous scanners were a breeze to figure out, having me mention on many occasions, "I just throw the manual over my left shoulder and wing it! There isn't a scanner made that I can't program, the manual just gets in the way!" I took it as a personal affront when Uniden came out with the '396. They must have heard me and developed a "required manual read" scanner out of sheer spite!

Looking back on it, I find it amusing, learning a valuable lesson to boot!

(And my buddy still reminds me I owe him a beer or two or three when I see him-and he doesn't even drink!)

I write all of this as a way of expressing my thanks to the group(s) for the valuable help all have afforded.

Did you give the RTC battery time to charge? No unit exhibited the issue right out of the box (except when users failed to leave it on long enough for an initial charge, which is not RTC failure). UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Bill, The radio is still doing the same things even after trying everything that the group has suggested. Scanner was plugged in since 9:00pm last night. I probably should have went to a dealer in person instead of getting it from a online retailer. I can only wait to hear from the dealer. I may even ask for a refund. It's a shame it turned out this way. THANKS.

Coming back to my senses, I called my buddy who stopped by and within a half hour had the thing up and running! It made me ponder my reluctance to ask for help from someone who I personally knew, out of fear they will never let you forget it! What I do recall is consciously discarding that option of asking for help, too proud to admit this new radio actually insisted on reading the manual first. Previous scanners were a breeze to figure out, having me mention on many occasions, "I just throw the manual over my left shoulder and wing it! There isn't a scanner made that I can't program, the manual just gets in the way!" I took it as a personal affront when Uniden came out with the '396. They must have heard me and developed a "required manual read" scanner out of sheer spite!
Looking back on it, I find it amusing, learning a valuable lesson to boot!
 (And my buddy still reminds me I owe him a beer or two or three when I see him-and he doesn't even drink!)
I write all of this as a way of expressing my thanks to the group(s) for the valuable help all have afforded.

Maybe try connecting to a PC and use the CLEAR USER DATA in Sentinel?

Also maybe try leaving it powered for a while to charge the clock battery.

Sent: Wednesday, May 25, 2016 9:59 PM
To: BCD536HP@yahoogroups.com
Subject: Re: [BCD536HP] DIY Battery fix..

Thanks for the reply. My scanner is just out ofthe box. I'm getting lotsof feedback and I hope something works. I've also contacted the seller. We'll see what happens. JOHN

My 536 is having the battery issue, but I really don't care to send it
off for repair. I haven't ever opened it yet, but considering it's
sitting above my radio service bench, I'd be curious to know if anyone
is aware of what the fix is. I'm sure I could go in and find the battery
and replace it, just don't know if there are other mods that need to be
done.

Already did that. It didn't make any difference. Radio was plugged in all night. It still comes on and says clock settings have been lost. When I try to reset by pushing the E key or just waiting 5 seconds it does say processing then shuts off and then back on again repeatedly. Pushing the key or not doing nothing at all has no affect on it at all

The problem is the scanner seems to be stuck in a mode that it will not respond to any key command on the scanner. It says it lost the clock settings. Press the E key to set it. When I did that it just kept cycling saying the same message about the clock. Pressing the buttons made no difference. I turned the scanner off. Unplugged it. Plugged it in and tried again. Same results. I'm at a loss here. I sent Uniden an e mail. I tried to call them at tge number in the owners manual. The line was busy. That's where I am at this point. Thanks

It's pretty simple click Menu scroll up or down to settings then set clock.

John,

Before you do that, see if you can find someone knowledgable to take a crack at it. If you lived close to me, for example. I don't know if you let it be known where you are... Finding that person might be easier than you think... stop by a local volunteer (or paid) fire department, do you know any ham radio operators? The VFD's are usually big into monitoring and there's usually at least one individual who has the same radio as you. Hams can put the word out amongst themselves about your dilemma and may be able to help also.

So don't say it's a shame it turned out this way. You used the word "turn" as past tense when you added the "ed" to the end of it. The issue is not done with you quite yet. The sentence should read "It's a shame it's turning out this way.", indicating a continuing effort.

Bill

As others have said, you may not notice the problem right away. So why bother possibly getting a different unit, using it for 3 months, then seeing the problem, and STILL have to send it to Uniden? Why not send the one you have now to Uniden?

You have to wait for the firmware to be released.

The scanner is repeatedly trying to boot up but can't get past the clock settings lost screen. Will battery charge with this going on??

Enter the correct time. Leave the scanner on for 50 or so hours.

Possible? Yes. The data is included in the GPS signal.

Is it implemented in the scanner's software? No - not at this time. Maybe someday - maybe never.

I even considered a medicine man or witch doctor, to remove the curse someone had placed on the radio, and actually considered using the plain brown paper bag method, whereby you place the radio in the bag, go out on the front lawn and swing it over your head, all the while screaming like a chicken!
> Coming back to my senses, I called my buddy who stopped by and within a half hour had the thing up and running! It made me ponder my reluctance to ask for help from someone who I personally knew, out of fear they will never let you forget it! What I do recall is consciously discarding that option of asking for help, too proud to admit this new radio actually insisted on reading the manual first. Previous scanners were a breeze to figure out, having me mention on many occasions, "I just throw the manual over my left shoulder and wing it! There isn't a scanner made that I can't program, the manual just gets in the way!" I took it as a personal affront when Uniden came out with the '396. They must have heard me and developed a "required manual read" scanner out of sheer spite!

BCD536HP Set Up

The problem is the scanner seems to be stuck in a mode that it will not
respond to any key command on the scanner. It says it lost the clock settings.
Press the E key to set it. When I did that it just kept cycling saying the
same message about the clock. Pressing the buttons made no difference. I
turned the scanner off. Unplugged it. Plugged it in and tried again. Same
results. I'm at a loss here. I sent Uniden an e mail. I tried to call them at
tge number in the owners manual. The line was busy. That's where I am at this
point. Thanks

It's pretty simple click Menu scroll up or down to settings then
set clock.

He did that and said the display stays white (normal).

I think it was mentioned that the card was cleared using a card
reader, but that's the only thing I can think of left to try.

I would say it's a bad card. OR, maybe try updating the firmware using
the card reader than put that back in the scanner. (yes, you can do that).

Thanks for the reply. My scanner is just out ofthe box. I'm getting lotsof feedback and I hope something works. I've also contacted the seller. We'll see what happens. JOHN

My 536 is having the battery issue, but I really don't care to send it off for repair. I haven't ever opened it yet, but considering it's sitting above my radio service bench, I'd be curious to know if anyone is aware of what the fix is. I'm sure I could go in and find the battery and replace it, just don't know if there are other mods that need to be done.

No it wasn't turned on. Just plugged in. I didn't want to damage the radio as its turning itself off and on repeatedly. But, I know you know these radios well so I will turn it on and see what happens. Initially, I turned it on. I thought I set the clock until the scanner told me clock settings were lost. As of now I am unable to reset the clock. Pressing E key makes no difference. Either does just waiting and pressing nothing. I'm sorry if I keep repeating myself. I will follow the instructions you gave me. Thank you very much for your help. JOHN

Subject: Re: [BCD536HP] Brand New BCD536HP Set Up

Bill, The radio is still doing the same things even after trying everything that the group has suggested. Scanner was plugged in since 9:00pm last night. I probably should have went to a dealer in person instead of getting it from a online retailer. I can only wait to hear from the dealer. I may even ask for a refund. It's a shame it turned out this way. THANKS. JOHN

Having trouble following the thread... Did John have any success?
I remember when I got my BCD396XT years ago... couldn't get it to play no matter what I did, or so it seemed... I even considered a medicine man or witch doctor, to remove the curse someone had placed on the radio, and actually considered using the plain brown paper bag method, whereby you place the radio in the bag, go out on the front lawn and swing it over your head, all the while screaming like a chicken!
Coming back to my senses, I called my buddy who stopped by and within a half hour had the thing up and running! It made me ponder my reluctance to ask for help from someone who I personally knew, out of fear they will never let you forget it! What I do recall is consciously discarding that option of asking for help, too proud to admit this new radio actually insisted on reading the manual first. Previous scanners were a breeze to figure out, having me mention on many occasions, "I just throw the manual over my left shoulder and wing it! There isn't a scanner made that I can't program, the manual just gets in the way!" I took it as a personal affront when Uniden came out with the '396. They must have heard me and developed a "required manual read" scanner out of sheer spite!
Looking back on it, I find it amusing, learning a valuable lesson to boot!
(And my buddy still reminds me I owe him a beer or two or three when I see him-and he doesn't even drink!)
I write all of this as a way of expressing my thanks to the group(s) for the valuable help all have afforded.

Bill

  Thanks for the suggestion. I'll try it JOHN

  Maybe try connecting to a PC and use the CLEAR USER DATA in Sentinel?

Also maybe try leaving it powered for a while to charge the clock battery.

The fix is that they replace the entire "control board". Which
apparently is the main board on the computer. It's far more than just
popping in a new battery.

Michael,

Where'd that come from? How does the scanner being turned on and off cause a bad SD Card?

I'm getting the impression the SD card is catching hell every time we run out of "fix" ideas. To that end, how many times has replacing the card corrected the different problems that have been presented here?

Sure, SD Cards can cause problems and need to be included in the suspect list of causes, but the scanner is turned on and off as a part of normal use...

Are we grasping at straws?

Bill

It's rare that I turn off any of my scanners. I have always left them on, and rarely have issues with them.
That said it's how they are powered down that can cause card issues. Not as big an issue with the 536 as the 436 where power loss during shutdown write can corrupt a card, but the 536 can due the same in a mobile application. Also used on vehicle power either unit could get surges during startup.

All;

I have been running a BCD536HP in my vehicle for two years now. It's just one of four radios mounted in an aftermarket console mounted between the front seats and powered directly to the battery. So, if I forget to turn the radios off individually when I shut off the truck, I've got a dead battery!

Powerwerx sells a unit (ITS-12) that measures the battery voltage and automatically turns off after time. It's adjustable... I have it set for two minutes. When the battery depletes to about 12.9 volts, the timer kicks in, and two minutes later it divorces power to anything connected to it. (Upon vehicle startup, the unit reads the higher voltage the alternator is producing to charge the battery and automatically turns on, supplying power to my console.)

But the question arose where the BCD536HP was concerned... Will it adversely affect the radio, pulling the plug, as it were, instead of using the on/off radio knob? Because pulling the plug does not allow the radio to write to the SD Card before it shuts down... And that is NOT the prescribed method I have had no issues

I accidentally sent my last post before I was done...

To finish, I have had no problems with this setup where the scanner is concerned. Yes, I took a chance not following the prescribed method but it works. And the SD Card hasn't suffered.

On another note, I didn't bother getting power from the aux on the ignition switch because my truck will continue powering the am/fm radio after I turn the truck off until it sees the voltage drop below a certain point, at which time it will shut off the am/fm radio and display a message about saving the battery. I didn't care to delve into the electronics.

In theory, if the SD card was being written to (like when auto-recording the last 30 seconds etc.) and power was suddenly removed without using the power switch built into the volume knob, you could corrupt the SD card.

If you want to pull the plug, as it were, instead of using the power knob, I would think that disabling the recording (Settings, Replay Options, Set Replay Duration to "Off") would prevent or at least minimize writing to the SD card while scanning. In theory, that would stop the corruption problem from power-off via the 12 volt source.

This is a rather perplexing situation. The scanner has a pin which enables auto-dimming with your dash lights on but has no pin for causing an orderly shutdown. If I were designing a radio which fits in a DIN sleeve (made for mobile use) I'd certainly include the feature to maintain memory power and only cut the main power after completing the orderly shutdown by having both an always-on and a switched 12 volt input. But I didn't design it... Maybe the next model (BCD-736HP???)

No doubt. But that is not the issue I addressed when describing my setup. Anytime power is divorced, not using the prescribed method, it will most probably give us problems. Especially if the device is backing up data to a memory device! In my favor, the scanner does not do a backup to the SD Card (or read from it) until it sees on/off control activity. What I learned early on was that if I did anything to the scanner, like locking out a system, I had to remember to manually turn it off first, allowing it the write the new changes to the SD Card. If I didn't, the system I locked out would pop back up on me!

The HP-1 works similarly. If you don't have batteries in it, it won't save your changes nor will it record anything to the SD card. However, the 536 has no batteries and doesn't seem to have any way of telling whether you pulled the plug.

I would think that the 536 would always be writing the replay buffer to the SD card - but that's an unknown. Looking at the contents of the micro-SD after an orderly shutdown I see the following:

E:/BCDx36HP/audio/inner_rec which is for the replay buffer recordings. Each individual file is a separate recording for each channel or TGID session. Files are named based on the stored time and date. They also have timestamps equivalent to the moment I turned the scanner off. It's unknown if these will change constantly or if they're written only upon shutdown. This was with the replay duration set to 30 seconds so I changed it to 240 seconds and listened for several minutes.

After recording 240 seconds or more, I once again shutdown the scanner and read the contents of the inner_rec folder. Now the timestamps show different times (by a few minutes) which indicates the recordings are more-or-less constantly being written to the micro-SD card. So this means that pulling the power with your low-voltage sensing device still has the potential to corrupt the micro-SD card's contents as long as you're auto-recording anything.

My advice stands - turn off the replay feature in the menu or risk data corruption.

3177. Mobile Shutdown

Yahoo group: BCD536HP
Date: 2016-05-27 11:37:47 UTC
From: Wayne M
Topic: 3119 Message: 3177

I've been wondering about "pulling the plug" as in a mobile setup for a while now. When turning the radio off with the on/off switch the radio writes to the SD card and then shuts down. In my mobile setup, I have a relay switched on/off by the car radio on/off feed. The relay contacts go directly to the battery and feed the scanner as well as other radios. So when turning off the vehicle, all radios are powered off. I've used this setup with the 536 now for over a year and have not had a problem with the sd card. I did make a backup of the working card just in case.

I would think the only thing lost this way would be any changes made while the radio was in operation and just not stored to the card.

It is true writing to the SD card while losing power could damage the card but would that have to be a slow decline of power?

That was my setup too... I did eventually have a problem where the scanner wouldn't start - sometimes - it would freeze at the welcome screen. Not sure it was related.

Good point, the recording aspect. The scanner could very well be in the process of writing to the card. And any path it is using can get corrupted. I don't know all that much on how the cards are addressed though... It could be the recordings are buffered onto a memory chip and backed up to the card upon shutdown. In that case, my "pulling the plug" won't catch the scanner in a card writing session. But I'm just guessing. As far as the 536 being able to tell if I pulled the plug or not... Yes, it will know, but probably only in the case of my making changes such as changes to the programming... Those changes will not show up on the card. And the next time I turn it on I will know that I forgot to let the scanner write to the card before I pulled the plug.

Bill

On May 27, 2016, at 9:14 AM, bob.peloquin@gmail.com [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

The HP-1 works similarly. If you don't have batteries in it, it won't save your changes nor will it record anything to the SD card. However, the 536 has no batteries and doesn't seem to have any way of telling whether you pulled the plug.

I would think that the 536 would always be writing the replay buffer to the SD card - but that's an unknown. Looking at the contents of the micro-SD after an orderly shutdown I see the following:

E:/BCDx36HP/audio/inner_rec which is for the replay buffer recordings. Each individual file is a separate recording for each channel or TGID session. Files are named based on the stored time and date. They also have timestamps equivalent to the moment I turned the scanner off. It's unknown if these will change constantly or if they're written only upon shutdown. This was with the replay duration set to 30 seconds so I changed it to 240 seconds and listened for several minutes.

After recording 240 seconds or more, I once again shutdown the scanner and read the contents of the inner_rec folder. Now the timestamps show different times (by a few minutes) which indicates the recordings are more-or-less constantly being written to the micro-SD card. So this means that pulling the power with your low-voltage sensing device still has the potential to corrupt the micro-SD card's contents as long as you're auto-recording anything.

My advice stands - turn off the replay feature in the menu or risk data corruption.

Wayne,

Yes, that's one way to corrupt the data and/or damage a card. But I just fall back on this blanket answer when someone asks how to use a card and not damage or corrupt the data... The memory cards should not be subjected to any use other than the prescribed methods put fourth by the manufacturer of the card and the manufacturer of the device it's residing in. I know Uniden is not about to bless the way we are powering our scanners!

Bill

On May 27, 2016, at 7:37 AM, Wayne M wa1pma@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

I've been wondering about "pulling the plug" as in a mobile setup for a while now. When turning the radio off with the on/off switch the radio writes to the SD card and then shuts down. In my mobile setup, I have a relay switched on/off by the car radio on/off feed. The relay contacts go directly to the battery and feed the scanner as well as other radios. So when turning off the vehicle, all radios are powered off. I've used this setup with the 536 now for over a year and have not had a problem with the sd card. I did make a backup of the working card just in case.

I would think the only thing lost this way would be any changes made while the radio was in operation and just not stored to the card.

It is true writing to the SD card while losing power could damage the card but would that have to be a slow decline of power?

Bob,

I like that idea of the pin for shutdown. But where the pin for the display dimming sees a voltage change, the power pin would need to measure the electrical system's voltage level so it knows when to start the shutdown process. Powerwerx sells one of these devices and it's physically about 3" long by 1" wide by 2" deep. Probably because it's designed to manage much larger amounts of current whereas the same type of device would be much much smaller, only needing to satisfy the needs of the scanner... But yea, a good thought!

Bill

On May 27, 2016, at 7:46 AM, bob.peloquin@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

In theory, if the SD card was being written to (like when auto-recording the last 30 seconds etc.) and power was suddenly removed without using the power switch built into the volume knob, you could corrupt the SD card.

If you want to pull the plug, as it were, instead of using the power knob, I would think that disabling the recording (Settings, Replay Options, Set Replay Duration to "Off") would prevent or at least minimize writing to the SD card while scanning. In theory, that would stop the corruption problem from power-off via the 12 volt source.

This is a rather perplexing situation. The scanner has a pin which enables auto-dimming with your dash lights on but has no pin for causing an orderly shutdown. If I were designing a radio which fits in a DIN sleeve (made for mobile use) I'd certainly include the feature to maintain memory power and only cut the main power after completing the orderly shutdown by having both an always-on and a switched 12 volt input. But I didn't design it... Maybe the next model (BCD-736HP???)

Quite often when other solutions have not resolved the issue.

I've never seen one bad out of the box, but the symptoms hint that may
be the case. Either that or there is a hardware fault.

It could. It's the same as pulling the plug on your PC while
the hard drive is being written (a very close analogy).

I suggested the exact same thing to Uniden over a year ago.

It's the same concept - voltage or no voltage. If no voltage on the
ignition wire, start the shutdown routine. Voltage applied? Power up.

No voltage measurement needed - just a comparator measuring above 10V or so.

I just installed a BCD536HP with WiFi and wondering how do I connect to it now via my phone? The manual is very vague about this and only mentions being about to connect to it and control it with the remote software, but where do I get that?

Thanks!

TFerg53

Install the Uniden Siren app, then connect it in Access Point Mode for a direct connection to the scanner (get the IP from the scanner menu). Or connect it in Infrastructure Mode to use it on your LAN.

So, you cannot connected to the scanner unless you are on the same network (in the house) or via a VPN from elsewhere?

Thanks!

Bob,

I like that idea of the pin for shutdown. But where the pin for the display dimming sees a voltage change, the power pin would need to measure the electrical system's voltage level so it knows when to start the shutdown process. Powerwerx sells one of these devices and it's physically about 3" long by 1" wide by 2" deep. Probably because it's designed to manage much larger amounts of current whereas the same type of device would be much much smaller, only needing to satisfy the needs of the scanner... But yea, a good thought!

Bill

On May 27, 2016, at 7:46 AM, bob.peloquin@...m [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

In theory, if the SD card was being written to (like when auto-recording the last 30 seconds etc.) and power was suddenly removed without using the power switch built into the volume knob, you could corrupt the SD card.

If you want to pull the plug, as it were, instead of using the power knob, I would think that disabling the recording (Settings, Replay Options, Set Replay Duration to "Off") would prevent or at least minimize writing to the SD card while scanning. In theory, that would stop the corruption problem from power-off via the 12 volt source.

This is a rather perplexing situation. The scanner has a pin which enables auto-dimming with your dash lights on but has no pin for causing an orderly shutdown. If I were designing a radio which fits in a DIN sleeve (made for mobile use) I'd certainly include the feature to maintain memory power and only cut the main power after completing the orderly shutdown by having both an always-on and a switched 12 volt input. But I didn't design it... Maybe the next model (BCD-736HP???)

It's the same concept - voltage or no voltage. If no voltage on the
ignition wire, start the shutdown routine. Voltage applied? Power up.

No voltage measurement needed - just a comparator measuring above 10V or so.

The drop-in charger would not be possible for several reasons -
including the fact there are no exposed contacts.

The ignition control would be a simple firmware addition. VERY easy.
(and a menu selection for dim or power control)

I installed the 536 in my trunk and I hooked up a RF remote that triggers a relay that opens and closes the connection to J2. It is a 2-wire plug that goes from the faceplate to the main board. Its been a few months since I did it, but I think open circuit triggers the scanner to shut down and closed circuit (voltage present) turns the scanner on. You can observe it by pulling J2 with the scanner running. It will do the shut-down sequence. I can post the parts I used. I think it was an Arduino type dry contact relay. I also hijacked the Remote wiring harness to run power to the little internal relay, because I did not want to drill more holes in the back.

My problem was a little worse since starting my car dropped the voltage too low to keep the scanner running, so I also had to add a DC-DC (up) converter to solve that problem. Most people shouldn't have that low battery voltage problem though. I can upload photos of my wiring and internal scanner shots if there is interest.

Actually, I'd like to be able to hear it wherever I am not just at home. I can do that now via a scanner app and having it "broadcasting" to the Internet via radioreference.com, but I haven't found a reliable app that doesn't disconnect when you change from cell to wifi and back, etc., and I have to restart it. Was hoping this might be able to give me better access, that's what else there is.....☐.

I realize that Paul is replying about the other troubled scanner, FWIW
in my case the scanner is powered on and operating 24/7. So hopefully
it's had plenty of time to charge. Just every time there is a power
burp, I have to go through all the clock set stuff to get it restarted.

When it's bad is when I don't realize it's not operating and miss an
emergency.

For the other person yes initially leave the scanner on for 2+ days and
see if the problem goes away.

Being able to listen to the 536 from “anywhere in the world” is the third feature of “Siren” that we’re still waiting for. We already have 1) using your home network and 2) in your car and the third will be “anywhere in the world” using any available WiFi network. THAT will be great if and when it happens.

If the 536 is installed in your trunk, how to you control the volume level inside the car? Are you using your iPhone speaker only? Because, at least with mine, I can barely hear it through the phone’s speaker.

How do you manage the other control functions since most of them do not work with “Siren” just yet, if they ever will.

Do you have the latest firmware? The latest firmware should 'bypass' the date / time screen (if you don't select anything it auto powers on). however a bug I reported to Uniden a LONG time ago is the scanner doesn't always 'remember' what mode it was in when it was turned off. ie if you were monitoring a specific channel, it may turn back on and be scanning the entire system.

While I haven't used it, and you are likely aware, the mobile power cord
does have a second low current hot lead for CPU keep alive. Since I
haven't used it I'm not quite sure how it's implemented. Still putting
that on an always hot circuit may be advantageous.

I haven't used it either - because it does not exist.

The coaxial jack has two lines - power and ground.

The 3-line plug has 3 lines - power, ground, and DIM
(which dims the display backlight when your lights are on).

There is no "keep alive" voltage.

I probably should have said in my last reply, I filled out the return request while I was writing that message. So it should have an appointment to go back to Texas in the next few weeks.

Luckily I received a new BCD996P2 today to take its place while it's on vacation. I'll get it out and programmed in the next few hours.

Yes, Siren is the weak link in the setup. The inability to see what banks/systems are on or off is a major pain. For volume, I ran a speaker cable to the center console that has a passive volume control (Koss VC20) and then to a speaker mounted under the driver's seat. I leave the scanner at nearly full volume and use the console mounted volume control to adjust it down as needed. It works pretty well. The little RF remote is in the console tray that turns the scanner on and off. I use an Ipod Touch with a magnetic vent mount to run Siren. There is a mostly hidden right-angle Lightning cable that keeps the itouch charged. There is not enough free space to mount a ipod mini.

I uploaded some photos. You can see how I did it to provide proper shut down. One line has constant power and the other is switched for a relay that opens and closes the J2 circuit.

I guess that's what happens when I rely on my memory. I guess I crossed the scanner in my mind with a different radio. I know I do deal with plenty that do have a CPU keep alive. oops!! Sorry bout that Chief..

You missed it by *that* much. (assuming your Chief
comment was in reference to the old Get Smart TV show). :-)

Don't tell me that Joe, Make it so! Yes, it requires a new form factor, a design of the case that incorporates the contacts used in the drop in chargers with Li-Ion batteries. It's not like Uniden is blazing a new path... Amateur and commercial manufacturers have been doing it for years. You say it's not possible for MANY reasons... And then give one example "there are no exposed contacts"... I should hope not! Why would Uniden put contacts on the outside of the case? They don't use a drop in charger currently... Meaning there is no need for them. (My suggestion was in conjunction with a li-ion battery upgrade).

Bill

I looked at the pics and can see what you did. The DC-DC threw me for a minute but now I remember why you put that in.

Once the radio goes through the "normal" shutdown how do you determine when to open power to the radio? Or are you maintaining power to the radio at all times and just using J2 to switch the radio on/off?

Yes, I gave one example. It's also not possible to charge cells in
series, so they would need that redesign. LIon cells are not very common
compared to NiMH cells. That's two more reasons.

Seriously? I suggested Li-ion, not Li-poly... Li-ions have been around for some time and are extensively used in portable comm gear. And the fact that they are negates your other reason... How they are charged.

Bottom line is what I would like to see as improvements is not some pie in the sky fantasy. So, Li-ion batteries and along with them, drop in chargers are a realistic, do-able suggestion. And a SD Card socket mounted to the outside of the case is not only possible, it is sorely needed. That piece of crap that passes for a card holder in the 436 is deplorable. I can reject all three of the reasons given... More like excuses for the real reason, which is cost. What I suggest cost money. And the profit margin is shaved very close in this specialty market. But then, it's the same way in the amateur radio market, another specialty market where these ideas I've suggested are not even considered innovative anymore, they've been around too long...

And of course, I realize all I have written here is just one man's opinion!

Bill

Topic: 3119 Message: 3218

I just looked, and I don't see any rechargeable LIon cells at WalMart, and the non-rechargeable cells cost as much as the rechargeable NiMH cells. If fact, a Google search for "rechargeable LI Ion AA cells" yields few credible results - including one labeled "Lithium Iron cells". If you make a switch, the replacement should be at least as accessible as the current form. Also, I would need to replace all my chargers.

Drop-in chargers mean little to me since I need continuous operation capability, and cannot have the scanner tethered to the wall.

Your suggestions can be just as easily dismissed, but I responded with a technical argument, not an emotional one. In the current scanner, there are several reasons why what you want is not possible.

The last thing I would want to see is for Uniden to return to proprietary battery packs that you can only get from a few sources - even if it is the cutting edge of technology. The only advantage of LIon cells is the slightly higher capacity.

On the socket, I generally agree, but it's not like you have to take it out much.

Topic: 3119 Message: 3219

Uniden did use battery packs in the not so distant past (as recent as the BC235XLT/BC245XLT series), and they switched due to all the complaints from us, and frankly, I'm glad they did! I don't care what the batteries are made of, if they go dead at an inopportune time, your scanner will be useless until you can get a charge. By going from the battery packs to the individual and common batteries gives us the ability to only be as far away from scanning as a convenience store or gas station should our batteries go dead without the ability to recharge. You would be surprised at how easy it is to get caught with dying batteries when you want your scanner most. Sure you can buy extra battery packs and say that it won't happen to you, but even if you buy 10 extra battery packs, how many scanner consumers do you think will be so prepared? Good examples of this can be natural disasters, a time when you most want to monitor, yet you're without power for a week or more, and that's just one example.

Seriously? I suggested Li-ion, not Li-poly... Li-ions have been around for some time and are extensively used in portable comm gear. And the fact that they are negates your other reason... How they are charged.

Bottom line is what I would like to see as improvements is not some pie in the sky fantasy. So, Li-ion batteries and along with them, drop in chargers are a realistic, do-able suggestion. And a SD Card socket mounted to the outside of the case is not only possible, it is sorely needed. That piece of crap that passes for a card holder in the 436 is deplorable. I can reject all three of the reasons given... More like excuses for the real reason, which is cost. What I suggest cost money. And the profit margin is shaved very close in this specialty market. But then, it's the same way in the amateur radio market, another specialty market where these ideas I've suggested are not even considered innovative anymore, they've been around too long...

And of course, I realize all I have written here is just one man's opinion!

Bill

3220. Re: [BCD536HP] Re: Brand New BCD536HP Set Up

Yahoo group: BCD536HP
Date: 2016-05-29 01:24:11 UTC
From: ka3ffy
Topic: 3119 Message: 3220

actually, every time you shut off the scanner, it writes to the SD card current status. for my mobile, it writes location, miles radious. etc. this way when i power up, it doesn't have to do a double load of the database.
when i use it and shut it down, the current congif is saved. i have noticed if i turn it on from the same location i turned it off, it loads once. if i turn it on 2 days later from a different location. it boots old config, then reboots new location config.
I would love to have an extra input for ignition. if i don't turn it off when i shut the truck off. when i start it up with scanner powered up, it will do a reboot because it will loose power.unless i put rechargeable batteries inside the scanner to stop this problem.
 maybe some day....
 ka3ffy IC-7000 IC-V8000 IC-208H RT-D8900 IC-CYF221S(440) HR-2600 TS-430 IC-F121 IC-F221 IC-F621-2 IC-F6021 many more
wqwv350 IC-CYF221S(GMRS) IC-F221
xyb3529 DX-959 BC980SSB many others

  I just looked, and I don't see any rechargeable LIon cells at WalMart, and the non-rechargeable cells cost as much as the rechargeable NiMH cells. If fact, a Google search for "rechargeable LI Ion AA cells" yields few credible results - including one labeled "Lithium Iron cells". If you make a switch, the replacement should be at least as accessible as the current form. Also, I would need to replace all my chargers.

Drop-in chargers mean little to me since I need continuous operation capability, and cannot have the scanner tethered to the wall.

Your suggestions can be just as easily dismissed, but I responded with a technical argument, not an emotional one. In the current scanner, there are several reasons why what you want is not possible.

The last thing I would want to see is for Uniden to return to proprietary battery packs that you can only get from a few sources - even if it is the cutting edge of technology. The only advantage of LIon cells is the slightly higher capacity.

On the socket, I generally agree, but it's not like you have to take it out much.

I see rechargeable LIon batteries at WalMart. If you go to the gardening section you be surprised of the high capacity rechargeable batteries they have in stock. My Walmart only gets few boxes in for summer season and once sold out that's it till next summer

Joe,

If inferring that my side of this discussion has an emotional aspect to it, not so... But as we are talking about personal preferences, I can see where that might be the case. I too wondered if anything I wrote could be construed as anything but technical or factual in nature. It has been my pleasure to discuss things with you knowing that you always kept it factual and polite. And I wish to thank you for all you've done here. You are a true asset to any discussion.

It becomes clear now that I learn of a personal preference of yours... Proprietary battery packs. You don't like them. And there's the sticking point... You argue against them, I argue for them. Of course looking in Walmarts isn't going to find us rechargable AA Li-Ion batteries as you have noted. All of which I see had nothing to do with my liking drop in chargers and Ali-Ion packs. I expected it was understood I had suggested an entirely new power sourcing process when I suggested Li-Ion battery packs and drop in chargers. What I didn't know was your dislike for them. Thanks for explaining why.

What I'm really saying is I liked the concept of a battery pack. I don't remember if the Uniden packs were truly a "pack" or just a container that held a bunch of AA batteries which you needed to remove from the case so the batteries could be recharged outside the radio-I prefer not to use the radio to recharge-or replace if using disposables. That would be a pain, first removing the pack from the radio, then the batteries from the pack, replacing and reinstalling. Extra steps that gain nothing. The disposable Li-Ion AA batteries from Eveready do last longer than alkaline disposables-only wish they made a rechargable AA Li-Ion that meets the radio's needs voltage wise.

As my boss used to say when trying to impress upon me the need to change the topic... "How about those Red Sox?"

Bill

I just looked, and I don't see any rechargeable LIon cells at WalMart,
and the non-rechargeable cells cost as much as the rechargeable NiMH
cells. If fact, a Google search for "rechargeable LI Ion AA cells"
yields few credible results - including one labeled "Lithium Iron
cells". If you make a switch, the replacement should be at least as
accessible as the current form. Also, I would need to replace all my
chargers.

Drop-in chargers mean little to me since I need continuous operation
capability, and cannot have the scanner tethered to the wall.

Your suggestions can be just as easily dismissed, but I responded with a
technical argument, not an emotional one. In the current scanner, there
are several reasons why what you want is not possible.

The last thing I would want to see is for Uniden to return to
proprietary battery packs that you can only get from a few sources -
even if it is the cutting edge of technology. The only advantage of LIon
cells is the slightly higher capacity.

On the socket, I generally agree, but it's not like you have to take it
out much.

Good points Dewey,

All valid. But those "doomsday" scenarios you refer to, can be planned for regardless of how you power your gear, if so inclined. Again, it's your personal preference and I respect it. Thanks for the input on the backlash Uniden experienced. It puts my preferences in the minority. But I prefer what I suggested. I've satisfied my needs for longer life by buying one of those Li-Ion packs used to recharge cell phones. It's as big as the 536 and of course, adds to the inconvenience.

Bill

On May 28, 2016, at 7:11 PM, Dewey Dewey3@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Uniden did use battery packs in the not so distant past (as recent as the BC235XLT/BC245XLT series), and they switched due to all the complaints from us, and frankly, I’m glad they did! I don’t care what the batteries are made of, if they go dead at an inopportune time, your scanner will be useless until you can get a charge. By going from the battery packs to the individual and common batteries gives us the ability to only be as far away from scanning as a convenience store or gas station should our batteries go dead without the ability to recharge. You would be surprised at how easy it is to get caught with dying batteries when you want your scanner most. Sure you can buy extra battery packs and say that it won’t happen to you, but even if you buy 10 extra battery packs, how many scanner consumers do you think will be so prepared? Good examples of this can be natural disasters, a time when you most want to monitor, yet you’re without power for a week or more, and that’s just one example.

Subject: Re: [BCD536HP] Re: Brand New BCD536HP Set Up

Seriously? I suggested Li-ion, not Li-poly... Li-ions have been around for some time and are extensively used in portable comm gear. And the fact that they are negates your other reason... How they are charged.

Bottom line is what I would like to see as improvements is not some pie in the sky fantasy. So, Li-ion batteries and along with them, drop in chargers are a realistic, do-able suggestion. And a SD Card socket mounted to the outside of the case is not only possible, it is sorely needed. That piece of crap that passes for a card holder in the 436 is deplorable. I can reject all three of the reasons given... More like excuses for the real reason, which is cost. What I suggest cost money. And the profit margin is shaved very close in this specialty market. But then, it's the same way in the amateur radio market, another specialty market where these ideas I've suggested are not even considered innovative anymore, they've been around too long...

And of course, I realize all I have written here is just one man's opinion!

Michael,

Do they fit the AA physical size? Where they would fit in the radio?

From: Radiotronic Gizmo
Topic: 3119 Message: 3225

And as wikpedia says:

Lithium-ion batteries are common in <https://en.wikipedia.org/wiki/Consumer_electronics> home electronics. They are one of the most popular types of rechargeable batteries for <https://en.wikipedia.org/wiki/Portable_electronics> portable electronics, with a high <https://en.wikipedia.org/wiki/Energy_density> energy density, tiny <https://en.wikipedia.org/wiki/Memory_effect> memory effect <https://en.wikipedia.org/wiki/Lithium-ion_battery#cite_note-8> [8] and low <https://en.wikipedia.org/wiki/Self-discharge> self-discharge. Beyond consumer electronics, LIBs are also growing in popularity for military, <https://en.wikipedia.org/wiki/Battery_electric_vehicle> battery electric vehicle and <https://en.wikipedia.org/wiki/Aerospace> aerospace applications. <https://en.wikipedia.org/wiki/Lithium-ion_battery#cite_note-9> [9] For example, lithium-ion batteries are becoming a common replacement for the <https://en.wikipedia.org/wiki/Lead_acid_battery> lead acid batteries that have been used historically for golf carts and utility vehicles. Instead of heavy lead plates and acid <https://en.wikipedia.org/wiki/Electrolyte> electrolyte, the trend is to use lightweight lithium-ion <https://en.wikipedia.org/wiki/Battery_pack> battery packs that can provide the same voltage as lead-acid batteries, so no modification to the vehicle's drive system is required.

I just looked, and I don't see any rechargeable LIon cells at WalMart, and the non-rechargeable cells cost as much as the rechargeable NiMH cells. If fact, a Google search for "rechargeable LI Ion AA cells" yields few credible results - including one labeled "Lithium Iron cells". If you make a switch, the replacement should be at least as accessible as the current form. Also, I would need to replace all my chargers.

Drop-in chargers mean little to me since I need continuous operation capability, and cannot have the scanner tethered to the wall.

Your suggestions can be just as easily dismissed, but I responded with a technical argument, not an emotional one. In the current scanner, there are several reasons why what you want is not possible.

The last thing I would want to see is for Uniden to return to proprietary battery packs that you can only get from a few sources - even if it is the cutting edge of technology. The only advantage of LIon cells is the slightly higher capacity.

On the socket, I generally agree, but it's not like you have to take it out much.

Of course, you do understand the 18650 is not the Lion equivalent of a AA.

ML

I see rechargeable LIon batteries at WalMart. If you go to the gardening section you be surprised of the high capacity rechargeable batteries they have in stock. My Walmart only gets few boxes in for summer season and once sold out that's it till next summer

I just looked, and I don't see any rechargeable LIon cells at WalMart,
and the non-rechargeable cells cost as much as the rechargeable NiMH
cells. If fact, a Google search for "rechargeable LI Ion AA cells"
yields few credible results - including one labeled "Lithium Iron
cells". If you make a switch, the replacement should be at least as
accessible as the current form. Also, I would need to replace all my
chargers.

Drop-in chargers mean little to me since I need continuous operation
capability, and cannot have the scanner tethered to the wall.

Your suggestions can be just as easily dismissed, but I responded with a
technical argument, not an emotional one. In the current scanner, there

are several reasons why what you want is not possible.

The last thing I would want to see is for Uniden to return to
proprietary battery packs that you can only get from a few sources -
even if it is the cutting edge of technology. The only advantage of LIon
cells is the slightly higher capacity.

On the socket, I generally agree, but it's not like you have to take it
out much.

You will be shocked to learn that Uniden and other, now defunct, scanner manufacturers have produced both in the past.

When the BC 235/245 portable scanners were in production, they had proprietary batter packs. EVERYONE hated them and complained to Uniden that they wanted AA batteries instead. I think it was Regency that had a scanner with a drop in charger. No one liked that, either.

People also complained about the cost of stand alone chargers.

One of the big complaints about the battery packs was that the wires were frail and often had to be repaired. People used to go to RS and ask to scrounge through the box of turned in portable phone batteries to cut off the wires so they could repair their Uniden battery packs.

Speaking of which, portable phones no longer use battery packs and instead use AA or AAA batteries. Same issues, same solution.

I think the 250/296 also had battery packs, and the review in Monitoring Times complained the the battery holders supplied in GRE made RS scanners were superior because they allowed the use of AA batteries.

I remember when the 396T came out how everyone loved that Uniden had changed the design to use AA batteries.

So, it's been done before and failed in the market place. I don't expect that Uniden will try again.

I don’t want to drift too far off the topic, but yes, it was the Regency HX1000 that used the battery pack/drop in charger.

The J2 circuit powers down the radio, so I don't have to kill power to the radio. It is a direct connect to the battery so the supply is always live.

Connect Plus has a control channel that transmits continuously. In search or conventional scan mode the scanner will stay on the frequency.
Capacity Plus has a rest channel that typically has a 1 second 50 percent duty cycle (i.e. 1 second of signal, 1 second of no signal). In search or conventional scan mode, the scanner will likely stop and stay on the frequency (assuming scan resume delay is at 2 second default setting). If a unit radio transmits, it will take over the rest channel and a different frequency/slot becomes a new rest channel. This could just be a move to the other slot on the current frequency or it could move to a completely different frequency on the system.
In both of the above cases, you will typically hear no voice traffic (unless the other slot on the frequency becomes active with voice traffic). UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

  -------- Original message --------From: Howie Seiden <hnseiden@...> Date: 5/31/2016 10:51 AM (GMT-05:00) To: bcd536@yahoogroups.com Subject: Question about my results
So far this morning I am scanning the business bands and I get the radio occasionally stopping on some frequencies and it is displaying CAP or CON and displayed the color and the slot but no voice heard. This happens quite a few channels. Whenever I do get voice it displays DMR. My question on the other that are showing CAP and CON are these just digital sure. Audio that I hear nothing but locks up the radio or do I have to adjust attenuation?
I am also taking into consideration that this is a beta and will be different in the near future.
Thanks so far as I am having a fun day exploring.

In reading Paul's reply, the following occurred to me... The two slots on a frequency relate to two voice paths, where two different and separate conversations can co-exist at the same time. I've heard it stated a "simultaneously". While, for most all instances and purposes it's true because it sounds that way, it's really not at the same time. But because the two sets of different and seperate data packets (am I saying this right?) are being transmitted so quickly, the human ear is not able to hear any noticeable delays. But they are there none-the-less. My question is this "If my understanding of TDMA is correct as I have stated, and we can't decipher the extra time being used when both slots are in use at the same time, why aren't there more slots per frequency? How many slots (conversations) could the channel handle before overload, degrading the comms?

Can we put additional slots on the same frequency, allowing more than two conversations?

Bill

TDMA as implemented in DMR uses 30 mS slot timing (i.e. Slot 1 data is sent for 30 mS, then slot 2 data is sent for 30 mS; rinse, repeat).
It is not correct to say that TDMA (as implemented in DMR) flips so fast that you cannot hear the gaps. The vocoder that is actually reconstructing the audio from the data provides a continuous audio stream when it is decoding voice on either slot. You don't hear the 30 mS "breaks" because there is no 30mS audio break.
Higher data rates would allow for additional slots, but typically also require more bandwidth for reliable signal recovery. UpManUpMan FAQ:

Thanks for the clarification. I'm still not getting the digital bandwidth thing to where I can compare it to analogue. I have always thought with analogue the lower the bandwidth number (25 vs 12.5) the range degraded, all other things remaining equal, as a general rule of thumb. Then digital came along but the bandwidth rules remained the same. Adding additional slots to DMR would additionally require more bandwidth or a narrowing of each existing slots bandwidth, keeping the same overall bandwidth. Can it be said any attempt to add more slots would be a case of diminished returns?

Anyway you're not running an electronics 101 course here so I understand if you choose not to reply. My problem is a conventional repeater system, where I cut my teeth, is a lot simpler to wrap your head around than trunked analogue, never mind trunked digital DMR!

For a fixed bandwidth, yes, there is a point of diminishing return to add channels, you can't break the laws of physics.

To add more channels (users) in a fixed bandwidth means less total (moment) time per channel which can roughly relate to further bandwidth narrowing of each slot (because you're lowering the data throughput with less time used). At some point the quality of the audio will suffer (M,m,m,m,m,m,max Headroom, pinched sounding audio) making it less useful. One can be safely assured that the number in current use is as far as practical or (financially) reasonable (or they'd stuff more in for a higher return on investment).

While the vocoder can 'fake' it by extending data streams into continuous (sounding) audio, there also comes a point that the higher speed device to perform the vocoding on less data (bandwidth per moment) becomes too expensive to market to the masses. Faster/higher data rates MUST take more bandwidth. While it may be technically achievable for more slots per KHz used, the dollar (Euro) rules and the audio must be deemed usable by the end user.

Thanks Rick,

I appreciate your response, taking it as verification, my understanding, at least on a basic level, of how things work...

Not knowing all the technical parameters of TDMA caused me to hesitate asking, phrasing my questions in such a manner that made sense to those in the know (people such as yourself, Paul, Mark, and others). But I guess my rudimentary understanding of the subject was close enough to compose questions that weren't answered with question marks! They actually made sense!

Bill

On May 31, 2016, at 6:10 PM, Rick WA6NHC wa6nhc@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

For a fixed bandwidth, yes, there is a point of diminishing return to add channels, you can't break the laws of physics.

To add more channels (users) in a fixed bandwidth means less total (moment) time per channel which can roughly relate to further bandwidth narrowing of each slot (because you're lowering the data throughput with less time used). At some point the quality of the audio will suffer (M,m,m,m,m,m,max Headroom, pinched sounding audio) making it less useful. One can be safely assured that the number in current use is as far as practical or (financially) reasonable (or they'd stuff more in for a higher return on investment).

While the vocoder can 'fake' it by extending data streams into continuous (sounding) audio, there also comes a point that the higher speed device to perform the vocoding on less data (bandwidth per moment) becomes too expensive to market to the masses. Faster/higher data rates MUST take more bandwidth. While it may be technically achievable for more slots per KHz used, the dollar (Euro) rules and the audio must be deemed usable by the end user.

>
> Thanks for the clarification. I'm still not getting the digital bandwidth thing to where I can compare it to analogue. I have always thought with analogue the lower the bandwidth number (25 vs 12.5) the range degraded, all other things remaining equal, as a general rule of thumb. Then digital came along but the bandwidth rules remained the same. Adding additional slots to DMR would additionally require more bandwidth or a narrowing of each existing slots bandwidth, keeping the same overall bandwidth. Can it be said any attempt to add more slots would be a case of diminished returns?
>
> Anyway you're not running an electronics 101 course here so I understand if you choose not to reply. My problem is a conventional repeater system, where I cut my teeth, is a lot simpler to wrap your head around than trunked analogue, never mind trunked digital DMR!

>
> It is not correct to say that TDMA (as implemented in DMR) flips so fast that you cannot hear the gaps. The vocoder that is actually reconstructing the audio from the data provides a continuous audio stream when it is decoding voice on either slot. You don't hear the 30 mS "breaks" because there is no 30mS audio break.

> In reading Paul's reply, the following occurred to me... The two slots on a frequency relate to two voice paths, where two different and separate conversations can co-exist at the same time. I've heard it stated a "simultaneously". While, for most all instances and purposes it's true because it sounds that way, it's really not at the same time. But because the two sets of different and seperate data packets (am I saying this right?) are being transmitted so quickly, the human ear is not able to hear any noticeable delays. But they are there none-the-less. My question is this "If my understanding of TDMA is correct as I have stated, and we can't decipher the extra time being used when both slots are in use at the same time, why aren't there more slots per frequency? How many slots (conversations) could the channel handle before overload, degrading the comms?
>

In search or conventional scan mode, the scanner will likely stop and stay on the frequency (assuming scan resume delay is at 2 second default setting). If a unit radio transmits, it will take over the rest channel and a different frequency/slot becomes a new rest channel. This could just be a move to the other slot on the current frequency or it could move to a completely different frequency on the system.

I cannot turn it on or off, it is just a dash, and when checkmark what I want to listen to, it changes everything, for the heck of it I checked everything, and when I load it in the scanner, it seems to check what it wants, not what I checked. All I do is have my favorites set, quick keys and all is set, got to edit profile, set my service types, set custom 1,,Xout of the profile and sent to scanner, and the profile is never the same as I set in on the PC,totally different without the custom 1 unchecked...This is weird,,,going to buzz Uniden,they were bust yesterday, long hold time, hung up...Still lost,,,And the frequencies are there and the talkgroug id's are set in the favorites. I can check the settings and my control channels are there and the talk groups ID's are there,Mark

After you set up Sentinel make sure you write it to the scanner or else the scanner has no knowledge of the changes.
Howie

Make sure all your service types are on.

BTW, I hear Dist 14 as well all the way down here on the NE side of Indy. But then I do have an antenna 60' in the air.

3248. BCD536HP Scanning and Receiving DMR One-Frequency Systems

Yahoo group: BCD536HP
Date: 2016-06-02 22:49:01 UTC
From: jack@...
Topic: 3248 Message: 3248

Here is a video I shot today of my BCD536HP Scanning and Receiving DMR One-Frequency Systems. The systems are all local amateur radio DMR repeaters. As you can see, there is quite a bit of info displayed on the screen. All of these systems have Search ID set to ON but also contain a few TGIDs as well.

https://www.youtube.com/watch?v=N5i_SWm8CrY https://www.youtube.com/watch?v=N5i_SWm8CrY

3249. DMR Decode sensitivity? Or something else

Yahoo group: BCD536HP
Date: 2016-06-03 05:23:18 UTC
From: Evan Platt
Topic: 3249 Message: 3249

So I've noticed on my 536 I often hear the DMR noise, but no voice audio. I had seen that before when running my 536 with a discriminator tap to my computer, and hear no DMR traffic, so I just assumed it was maybe control channel data and thought nothing of it.

So today I was running DSD on my PC along with the new DMR upgrade on the 536. I heard the DMR data noise, and heard 'broken' audio through the PC.

Looking at the data - am I correct? There's something coming at TS1 and TS2 at the same time? Is that what's happening? How will the 536 handle these?

Subject: [BCD536HP] DMR Decode sensitivity? Or something else

So I've noticed on my 536 I often hear the DMR noise, but no voice audio. I had seen that before when running my 536 with a discriminator tap to my computer, and hear no DMR traffic, so I just assumed it was maybe control channel data and thought nothing of it.

So today I was running DSD on my PC along with the new DMR upgrade on the 536. I heard the DMR data noise, and heard 'broken' audio through the PC.

Looking at the data - am I correct? There's something coming at TS1 and TS2 at the same time? Is that what's happening? How will the 536 handle these?

Subject: [BCD536HP] BCD536HP Scanning and Receiving DMR One-Frequency Systems

Here is a video I shot today of my BCD536HP Scanning and Receiving DMR One-Frequency Systems. The systems are all local amateur radio DMR repeaters. As you can see, there is quite a bit of info displayed on the screen. All of these systems have Search ID set to ON but also contain a few TGIDs as well.

3254. DMR Prerelease 2 available

Yahoo group: BCD536HP
Date: 2016-06-03 19:27:09 UTC
From: Uniden UPMan
Topic: 3254 Message: 3254

This prerelease is provided under the same conditions as previous. Namely:

1) You must understand that this is not final firmware and is not intended to reflect 100% the form or quality of the final DMR firmware.

2) You must have purchased a DMR Key and you must use that key to activate the pre-release in order to use DMR features (if you participated in Preview 1, you do not need to re-enter the key).

3) The password for the payload has changed. Please re-read the readme file that is included in order to get to the good stuff.

4) The directions for applying the update (which is not done through Sentinel) are in the Readme file. As an aside, the Readme file is named that for a very peculiar reason...it is actually expected that you will read it. This is not like a warranty or software license that you normally just click past. Read every word of the Readme (even if you read it with the previous version). As a bonus for reading it, you'll also find the changelog explaining what changed with this version.

Read this entire page: DigitalMobileRadioUpgrade < UnidenMan4 < TWiki.

Even if you have read it previously, before asking a question in this thread, read it again.

If you are not a "power user," I do not recommend you use any pre-release version of any product. Wait for the public release.

Ok, is that enough disclaimer?

The issue with the truncated Site ID in the Analyze mode seems to be fixed on DMR and P25.

Topic: 3074 Message: 3257

John,all my talk groups are on,and on the SD card,for some reason this is the only card that will mark the Custom 1 from Centinal. I check my departments,Fire/EMS/Emergency Management,and the Law Enforcement,on the select departments,on Edit Departments. OK,Select System,Edit Department, ((Law Enforcement))then to,Edit Channel,then go to Select Channel,,((I selected my,Home Town Of, Cedar Lake Police)),then click on edit TGID,talk group number is right number,as per R.R.then go to select service type,it is set at Law Dispatch.OK I even checked a few other Channels Talk Group numbers on the Law Enforcement,and Fire/EMS/Emergency Management,,,all talk group numbers are OK,same as Radio Reference.OK then I got to check the Frequencies for I believe is the Control Channels,Select System,
Lake County Public Safety,then to Edit Site,,comes up Countywide Simulcast,,Set Frequencies,all control Frequencies are from R.R.,,Quick Key is set to 1,and I have no band plan,figuring it is a P25, Phase II,so hoping Centinal sent everything to the scanner for it to work and receive..
So I am assuming that everything is turned on,Custom 1,TGID"S,Control Frequencies,Quick key,I am not using Location Control,it is off,figuring no GPS on the scanner.Any questions???Am I missing something on everything I had checked for this to work,,,Range is set anyway to 50,service types are on,law,Fire,Dispatch,all the good ones for the receive,I cannot think of anything else to look at,read the book 20 times,used the Mark"s easier to read on the Scanner and the Centinal software,doing everything I can think of....Does this T in the Mode,TDMA Capable Talk group,does Centinal set this or do I need to set this system of Lake County Public Safety manually....Totally confused,and I hope the way I explained what I have been doing and looking at on my settings will help all of you figure out what I am looking at for the proper setting of the scanner settings.I am about to either call Uniden,sell the scanner,or send it to them,Mark,,Sorry for the long winded,need to explain what I am looking at and doing...THANK YOU ALL SO MUCH,Mark,,,Help

Try setting range to zero. By setting it to 50 it turns on location control.

3259. Smallest possible computer (physical size) I can use for programming

Yahoo group: BCD536HP
Date: 2016-06-05 10:35:57 UTC
From: n1chu@...
Topic: 3259 Message: 3259

While traveling, I'd like to pack a smaller device where I can load my programming software. I've got a deal on an android tablet with a USB port but not sure if I can use Sentinel AND the aftermarket Butel software on it. I'm guessing not, at least not with Butel. If not, I'm asking all to share what they have come to depend upon, the consideration being physical size.

On another issue... I understand Uniden is close to releasing the android version of Sentinel. Will that require a different patch cord?

Bill

Android tablets will not handle programming software for most scanners. You can however get small Windows tablets that will, often for under $100. You need Windows and a USB port.

Also, the Android product that Uniden is releasing is not programming
software but rather Siren, used to listen and control the radio like the
iOS version does now.

3264. Re: [BCD536HP] DMR Prerelease 2 available

Yahoo group: BCD536HP
Date: 2016-06-05 12:44:45 UTC
From: Evan Platt
Topic: 3254 Message: 3264

This seems to have fixed a reception issue - at least for me. I had a system I hadn't listened to in a while and tried it after I put in the first beta firmware - 700/800 P25 Phase I system. Received almost no traffic. After the update to beta 2 so to speak, it's fine.

Any hints as to when Sentinel will be updated to allow DMR programming? Are we talking days? Weeks? Months?

Thanks :)

Look into a Winbook TW700. Windows OS, a full-size USB port, and they go new for about $80. A bluetooth mouse (and maybe a keyboard) makes for a great package. A supplemental battery is another recommendation.

Hi Bill,

You may want to look at the 2 in 1 laptops and also Trio makes a 10" tablet with attached keyboard that runs Windows 10 which would load all the software. It has a slot for a SDHC card to expand the storage. I can run Sentinel, Butel for 3 different scanners, and some other ham programs on the Trio. If you really need Butel etc stay with a Windows 10 OS tablet and make sure it's the latest version of Windows 10. There was an earlier version for tablets that was very limited. ALso the MS Surface will work. Price is a consideration though.... If you need more than one USB port at a time, a USB hub will get it done.

I believe Uniden touts a 3 week turnaround. That is, assuming you followed the return instructions and waited for them to tell you when to ship it to them.

I would expect you should see some kind of notification from them within a week.

Bill

Wayne mentions an otg. And I see one that connects to the 8 pin Apple Lightning connector. It's advertised as allowing ONLY specific needs for the iPhones and iPads listed. I have an iPad mini. The otg specs are listed below. While it states under "notes" #1, 2, and 4 that it does not support anything but IOS9.2, etc., I wonder if there IS an otg that does allow me to use my iPad mini for programming? Certainly not THIS otg! And, I suspect the iPad's won't do it even WITH the correct IOS9.2.
I expect my "no-go"suspicions will be confirmed but have to ask anyway...

Here are the specs...
8Pin USB OTG Host Lightning Cable Connect Adapter Reader For iPhone 6 5S 6S Plus

Description:

This is a listing for an OTG camera adapter cable for both iPhone 5s,6,6s,6 plus,6s plus and iPad Mini, 4, Air, Pro with IOS9.2 above,
With this new item, you can transfer your pictures from your camera to your iPhone / iPad and share them with your friends easily.

Note:
1.Only support IOS9.2
2.Only support photo/movie and MP4 format video Import to iPhone/iPad Album.
3.Only can read and play after imported to the phone.
4.Don't support Music and other types files.
5.Don't support Import to memory card from phone.
6.Support copied photo/movie and MP4 Format video import to memory card.
(Pls be sure create "DCIM" folder on memory card catalog and name files as IMG***.jpg,DSC****,jpg and Video as HMPT***.mov)
7.Only can read Camera memory card below 32GB.
8.Only support connect with TF Card Reader.

Size: approx 16cm
Color: White

Compatible Devices:

- For iPhone 5s, 6, 6s, 6 plus, 6s plus
- For iPad Mini, iPad 4, iPad Air series, iPad Pro

Package Included:
1 X OTG Cable for iPhone /iPad for IOS9.2 above only

Thanks,

Bill

If that's happening more often than not (you mention 'at times') then yes,
that's the clock problem.

No - just once. It wants the LCN not the slot number.

Tim,

There's the normal repair procedure where Uniden gives you an RMA (Return Merchsndise Authorization) for radios that are still under warranty. Once you have the RMA, you can ship the radio back. When it arrives at the repair depot it will get in line (que). And there is the process where we just mail it back when not in warranty, no real difference other than who pays for shipping. Uniden doesn't tell us when to send it, just send it. And, depending upon how busy they are will determine the total turn around time. My experience has been don't waste your time calling as to where your radio is in the process... Unless you've got half a day to kill. The newest process applies to the clock issue (and possibly other issues such as dimming displays and earphone audio levels), where the radio still functions... Uniden says to hold on to it at your home while its awaiting its place in line. Where would you rather have it waiting?... On a shelf at Uniden? Or home? Uniden notifies you when to ship it back. It reduces the total amount of time doing without it.

As for notifications relating to when your radio arrives and when it ships... I'm not sure. Out of warranty may not get you anything either, from Uniden. Even in warranty may not get you anything, again, from Uniden. But the shipper has that service available and it works with all three scenarios. This newest process (for x36's) gives you Uniden's best feel for how long they will have the radio before shipping it back.

Wondering if Uniden will adopt this latest process for all repairs?

Bill

So far it's been working great. With one exception.

Listening to a single channel DMR system on 155.3700.

Color Code is 3 according to DSD+ 2.10

I've programmed it into 2 different systems.

1. Conventional, Digital Only, search for Color Code.
2. DMR Single Channel, search for Color Code. (also tried with CC=3)

One time, it popped up with TGID 700, but only this one time. DSD+ decodes every time. I'm getting full signal strength.

I have a verbose log from DSD+ if there's anything in it that will help.

3290. How to have 2 outputs on the 536?

Yahoo group: BCD536HP
Date: 2016-06-06 20:13:50 UTC
From: Evan Platt
Topic: 3290 Message: 3290

So I'm looking at recording data (probably using proscan) on my computer. I realized that proscan can't handle a discriminator tap - guess I should have realized that - so I'm using the rear audio out jack to my computer. But then I lose audio on the 536. I tried hooking up a speaker to the front headphone out jack... so here's what i'm seeing:

If I connect the speaker to the front headphone jack, I can barely hear the speaker, even at max volume.

If I connect the audio patch cable from the front headphone jack to the PC, it's fine there, but if I connect the speaker to the back audio out jack, I get no volume to the speaker.

Is there a better way to do this?

Thanks :)

You can install a virtual audio patch cable (a few available for free), then route the audio via the wifi program (wiki site) into the virtual cable and tell your recording software to listen to the virtual cable. The speaker will still let you hear the scanner, the computer hears it too, then shunts it to the recorder. All good.

It takes longer to explain it than it does to do.

The headphone jack is designed to drive earbuds/headphones. If it had enough power to drive a speaker, then it would blow your eardrum into your cranial cavity.

Unfortunately the 536 lacks the record jack that graces the rear of the 996
and 15 series scanners.

You could add a record jack, I have seen people describing how to do so on
the RR forums, this would provide a steady audio level for recording so
that you can still adjust the volume for local listening. On older
generation radios we used to pull this audio from the 2 ends of the volume
potentiometer but I don't think that works on newer radios.

Because use of the headphones implies private listening (to keep other household members civil) and that means no speaker.

3299. DMR Prerelease 2 Issue

Yahoo group: BCD536HP
Date: 2016-06-06 20:34:31 UTC
From: duane@...
Topic: 3254 Message: 3299

Now it gets weird!

The channel I programmed to be conventional (155.3700), with Digital mode and CC = 3 or Search, shows NO signal strength when my DSD+ is receiving signal. If I switch the channel to Analog, the scanner then goes full strength and I hear the digital noise. Both the 536 and DSD+ are connected to the same antenna.

Again, programming a DMR frequency as conventional Digital shows 0 signal.

Duane
N7DDA

Evan, ProScan supports the Wi-Fi dongle so why not use it to provide the audio and data too. Audio quality is higher with the Wi-Fi because you won't get noise pickup caused by copper interfacing.

Ok, do you have a doc or a quick how to? I have the IP of the scanner (192.168.1.177) but I'm not sure where I enter that in Proscan?

The problem with this however is that the recording level is now controlled by the volume control. If you change the volume then you will alter the recording levels.

Wouldn't it always be controlled by the volume knob?

That is precisely what Siren does. Not as well as I would like it to, but it does do that.

3309. Re: [BCD536HP] Re: How to have 2 outputs on the 536?

The manual ProScan_Manual.pdf is in the ProScan folder. Easy way to view it is go to the Support -> Manual menu.

Here are the steps to access the Wi-Fi audio
1. Insure the Scanner Type is set to BCD536HP.
2. Go to the tab Audio Control and then choose (or click) Recorder, Source Client, Web Server, or RSOIP tab
3. Click the Input Sound Device box and choose URL.
4. Click the URL Setup button and a dialog will appear.
5. Enter in the URL exactly as shown below.

rtsp://192.168.1.177/au:scanner.au

6. Click the Connect button. You should see the Bytes counters incrementing. If you see an error message then it needs to be troubleshoot.

---In BCD536HP@yahoogroups.com, <evan@...> wrote :

Ok, do you have a doc or a quick how to? I have the IP of the scanner (192.168.1.177) but I'm not sure where I enter that in Proscan?

On Mon, Jun 6, 2016 at 7:07 PM, Evan Platt <evan@... mailto:evan@...> wrote:
Oh? Hmm... I May have to try that... Thanks :) Still evaluating the software so... better give it a go :)

On Mon, Jun 6, 2016 at 6:23 PM, bob@... mailto:bob@... [BCD536HP] <BCD536HP@yahoogroups.com mailto:BCD536HP@yahoogroups.com> wrote:
Evan,
ProScan supports the Wi-Fi dongle so why not use it to provide the audio and data too. Audio quality is higher with the Wi-Fi because you won't get noise pickup caused by copper interfacing.

NFM is the correct mode for DMR which is 7.6 kHz bandwidth.
(much narrower than the 11.2 kHz NFM filter)

On scanners that have record jacks (BCD996 series, BCT15 series...) the record jack is a constant level unaltered by the volume control, so you set the Record Input level on the computer to an appropriate level and leave it there.

Since the 536 doesn't have a Record jack (it was deleted to make room for the USB port used by the WiFi dongle) you can add a constant level record jack to replicate the ability of other radios.

I know. I was just following one of the tips in the Ver. 2 release notes, I think, that mentioned doing that. For me it helped receiving simplex DMR transmissions, even weak ones. Whereas before, I got nothing.

I ended up going to FM from NFM, no color code, Manual Threshold and set it at 7. Seems to be receiving okay now.

My question is, why does signal strength disappear when I set to digital, but full strength in analog???

3318. Re: [BCD536HP] How to have 2 outputs on the 536?

Or as I said earlier, use virtual audio cables (software) to take the audio stream from wifi (using BCD536HP Audio Player, available free from online) and route via the virtual cable to your broadcasting (Shoutcast, VLC etc) or recording device. The volume stays the same regardless of the knob. NOTE: The scanner can only feed ONE wifi audio stream, choose wisely.

John,I set the range to),I pick up a few things,public works,and a DNR Talk group,,nothing on my Lake County Public Service,the Project 25 Phase II system,nothing,and I did have Centinal Sentinel program it on the download,I also see that the Custom 1 is ON,I am picking things up on the Indiana Project Hoosier SAFE-T Motorola System,all my quick keys are on for Quick Key Status.I have the Modulation set to AUTO, Should I have it on ID scanning for a while and see what happens? Then go to ID Searching,,,ID Searching seems to pick up more on the Project Hoosier SAFE-T Motorola,still nothing on the Lake County Public Safety,Project 25 Phase II,,,Not once have I seen P25 on the screen when receiving anything . I am going to use my sons laptop,and he has Windows 8,and I will use the program USB cord,and also try the adapter for the mini SD card and see if I can get the Custom 1 to come on and see if anything may change,I have been using Windows 7,it puts the favorites on the scanner,but seems to not load Custom 1 on the scanner and all of most of my checked services to listen to.Maybe it is the PC,gonna try Windows 8 and see if any difference,,Thanks John,,will let you know,I have a few hours this morning to screw around,I will keep in touch. Thank you for the input in helping me out,Mark

Try ID Search on and see what it does.

Setting range to zero allows location control to act as its unlimited. Make sure location control is off

Also the the Wi-Fi audio can be piped through the local computer speakers by clicking the Loopback option in the Test & Monitor tab.

Hello,still no local Police or fire,St. John,Cedar Lake,Crown Point,Lowell,Highland,Hammond,Munster,etc,all of the local ares within and under 20 or so miles,or more. I even went to put the Talk group DEC numbers in manually and the scanner tells me Frequency Exists,so why will they not come over the scanner?????I put in a half dozen DEC numbers for the Talk groups and still nothing at all,,ZIP,they exist,but nothing,can this be telling me that the scanner may have a problem??? Or should I change to the HEX numbers for the talkgroups and see what happens??
The (MOT/P25) ID format is set to Decimal Format,,and
and the (EDCS) ID Format is set to AFS Format,which I believe is correct,as this is what was set on Sentinel software. Like I am saying,the Talk group ID's,DEC,are set,but no response at all from these area Departments at all.
And no difference between Windows 7 or Windows 8 turning on Custom 1,still will not transfer this checked,even with 2 system favorites being downloaded to the scanner.For some reason,this T,,TDMA Talk groups have me bugged,I was told this should still come on,as this is just nothing but a Phase II system and should monitor regardless with this scanner..Still drawing straws John?????
I think I may still call Uniden,I am working with you and appreciate all of your help and trial and errors,everything you tell me to do makes sense,but the scanner seems to not want to listen to our commands,or a glitch somewhere we just cannot find,,really disappointed in this scanner,thought it would be easy.
Trunking discovery on the Lake County Public safety does not pick up anything,Close call does nothing,and the enter Zip code does nothing,picks up things in Illinois,3 miles from state line,but not sure if working on picking up and Phase II,P 25 systems on anything.The Motorola works,Conventional works,still wondering why the P 25 and or Phase II will not work....Thanks again,gonna play around again for a while before I have to cut grass,and the kids want the pool open.Talk soon,any more ideas,running out myself...Thanks my friend,Talk soon John,,,,Mark,,Cedar Lake Indiana,,,,

Sounds like some services are not on. Check in the scanner itself that the correct services are on. Use SERV button then the scroll knob and make sure all Law TG's are ON.

Also make sure Emergency OPs and all Interop are on too.

3328. BCD536 ProVoice Harris Radio Encrypted System

Yahoo group: BCD536HP
Date: 2016-06-09 03:20:34 UTC
From: Kajj 1
Topic: 3328 Message: 3328

Can someone tell me if the BCD536 ProVoice will receive a Harris Radio Encrypted System?

I am in Mobile, Al and the City changed over to this system a couple of years back and now the

entire County and other Municipalities' within the County are also switching over!

Thanks for any explanation and help.

No, nothing but a subscriber radio can be used on an encrypted system.

Best bet is to fight city hall and get it unencrypted.

Joe M.
Is there a way to make sure 100% that a system is Encrypted as they have
claimed.
I have had a couple of people tell me it is not. And on the news channels at
night
if you listen you can hear the so called radios go off in the background.

If it was so secret for the PoPo's to hide behind these radios,
why is it that the news channels at least 4 of them can receive them

Mobile is Pro Voice, but my understanding is that it is not encrypted.
If and when they move to the new Harris P25 system, supposedly the city
PD and FD will be encrypted.

Thanks'.

I don't understand why the PopPo has to hide everything they are doing now.

If it was something serious like where the SWAT Team / Bomb squad were need

they have the capabilities of setting up certain ID's Encrypted that they could set up

and let the rest be hearable to the public. I am 64 and have bee listing to the Police Radio

since I think I was 15 or 16. 1 crystal plug in! I just don't think this is right! Oh well.

No sense in me purchasing one.

Thanks'

Easiest way is to find someone with a digital scanner and ask them if
they can hear it. That's where regional scanner clubs really help.

If your area doesn't have one, try to start one.

The radios you hear may be encryption-capable units on the system, or
they may be monitoring other areas.

Just watch the news and you will see reasons.

One area I know if went encrypted because some of the officers
didn't like the public being able to hear the calls they had.
(there is a relevant "baby / bath water" saying that applies)

Last comment: Some areas have now made it illegal
to photograph/video police on duty. Same reasons.

Like I said, fight it. You are a taxpayer and have a right to listen to police and fire comms. Fire certainly doesn't need encryption and police need no more than one or two encrypted channels.
Encryption causes more pro than it solves. And takes thousands of eyes and ears away from protecting the community. Not worth the added cost of encryption to protect from 1% of criminals who use a scanner.

3340. [BCD536HP] BCD536 ProVoice Harris Radio Encrypted System

Yahoo group: BCD536HP
Date: 2016-06-09 04:44:50 UTC
From: Kajj 1
Topic: 3328 Message: 3340

I honestly appreciate everyone's feedback on this.

I am so confused. I want to purchase the 536 so bad. I bout the P2 thinking that it was the one I needed and crossed my fingers that it was the one going to be updated to ProVoice.

Never happened.

No. 1 But when I asked those several people who told me yes they were un-encrypted and they were monitoring them

When I asked what radio they used to receive the system they never would answer me.

No. 2. I was even told about a month ago that The City and County are looking to move away from Harris System and just go digital. PII 700Mhz

This doesn't make since to me after paying $40 million dollars for a new system.

No3. I cannot understand how the media can get them and the general public cannot.

Broadcastify has the City and County. I wish I had a way to get up with him.

I believe he told me to just hang on that The City & County are changing to a digital PII 700Mhz Unencrypted system! Didn't say what Manufacture!

I do not know anyone around in Mobile that has the 536. I am on several groups. I get more information from this group than any other group.

There is no Regional Group around here nowhere, except South Alabama Scan and you cannot ever get an answer.

All they want to talk about is Baldwin County and the Air frequencies.

Again,

I appreciate all of you. I get a great deal of information from this group.

I have been going back and forth with Joe M. for years. Good guy. If he tells you something you can just about take it to the bank and cash it.

May last post on this unless I hear or learn something new!!!!!!!!!!

Whoever suggested the P2 would get the upgrade did you a disservice.

Keep after "those people" in #1. Non-replies suggest they are lying.

Government doesn't always make sense. When they need more money, they raise taxes. Many believe you are fortunate they let you keep some.

The media needs them to do their job. The public does not. Also keep in mind these radios can cost several thousands of dollars each.

If Broadcastify has them online, eMail the provider and ask what he is using to receive them. That might give you the answer. Make sure they are broadcasting the channels you want to hear, too.

If broadcastify has it, it is NOT encrypted .

Secondly, news agencies have a bit of pull. They use the law to get access to main dispatch channels on encrypted systems under Freedom of Information Act amongst other things.

Here you can't have a scanner in your vehicle or in public unless you are a ham with a valid license or you are a member of the media. I have both.

Really? While I don't fully disagree with you, I can't agree either. Where is it written that you have a RIGHT to know every detail? Are you truly so paranoid that you're worried someone is out to hurt you or waste your money? Then you don't know SQUAT about the reality of the FD and LE folks and what they do and go through so you can sit there and listen in on them.

What they're doing with our tax money, equipment and resources, in GENERAL terms, is and should be public knowledge but I can give you thousands of reasons why they'd want security and it has ZERO to do with those subjects or what you're afraid of.

Encryption does have to do with larger issues, like the right to privacy of individuals, victims, patients and arrestees involved in the daily events that fire and LE folks take care for us. It has to do with protecting those who DO the job too; we OWE them that much. It does have to do with wanting to keep a scene secure enough to do their job and keep the family, friends and looy-loos away. Not only does that make the scene less safe, it slows things down which can directly impact emergency care. And yes, it could even keep some reporters away since they tend to interfere and get in the way. The same filtering is done in social media and no one bemoans that. Boo hoo, let them do their job safely and then on to the next call.

I'll say this without reservation: There are SOME things, that the public has ZERO right to know; that the public does not WANT to know and that the public is happier NOT knowing. And there are numerous times that the privacy of the ONE is more important. So get over it.

Since when does ANY agency only run one or two calls at a time? Reducing secure traffic to certain channels means changing too many channels when something needs to be taken care of as quickly and simply as possible. It also makes it too easy for the right thing to be said, on the WRONG channel. If they decide they need encryption, give it to them. They record every channel anyway for their legal protection so you have access to it anyway, should you prove a valid need (that means court).

You have the right to know how your money is spent. You have ZERO rights to know every detail, iota and fact on every call. And THAT is law, both Federal and State, created to protect individuals involved and the public. If encryption makes it easier for those involved to do a better job then I'm not worried; I'd rather they had whatever it takes to do what they do, better.

Their behavior on the job is in the public and THAT is where you'll find the few bad apples, not chattering in secret on your scanner.

Rick,
China sounds like a good place for you.

Having been involved in law enforcement as a school police officer and as a dispatcher and also firefighter and EMT I know exactly what goes on. Including what they don't want the public to know. And in the time I was dispatching we used speech inversion on so few occasions it wasn't worth the money for it. Usually it was used when the officers asked me what I wanted for dinner! We used it otherwise on one call involving a minor female where I had to send an officer to her home to await her parents and explain why she was transported to the hospital. We also used it a couple times with a specific suspect who listened to us. 99% of traffic isn't sensitive and doesn't need encrypted. And yes, I do want to know when officers are trying to locate a suspect in my area or when a pursuit is headed my way. I don't want to get hit by some jackass who won't stop for police. And I don't want some officer searching for a suspect and see me carrying a gun on my property and thinking I'm the suspect. One of my dogs already helped catch one fool who ran from police. Most of the officers here know me and know I will back them up....but that new guy may not know that.

3345. OT: Re: [BCD536HP] BCD536 ProVoice Harris Radio Encrypted System

Yahoo group: BCD536HP
Date: 2016-06-09 06:26:10 UTC
From: MCH
Topic: 3328 Message: 3345

I don't want this to get drawn out, and while I agree you make some fine points, you can't argue that there are not officers out there who abuse their authority. Those are the ones pushing to hide what they do. Civilian Review Boards can be misled and kept in the dark. But when your review board consists of thousands of live monitors, you cannot hide bad behavior for long.

Individual privacy only goes so far before the right to know in order to keep yourself safe overrides the right to privacy. Sorry, but your privacy does not supersede MY safety. HIIPA laws protect privacy, but compliance does not mandate encryption. You simply don't give their name over the air. That's all HIIPA requires you to do (or not do) with respect to radio traffic.

In that area I mentioned that went encrypted, there are now a lot more guns in the hands of lesser-trained people who no longer know what is going on around them. They are not paranoid, but in a vacuum of knowledge they have to assume the worst and protect themselves.

There is a lot of talk about officer safety. But, officers made the CHOICE to put themselves in harm's way. It's part of the job and why that job includes carrying firearms. But there is such a thing as public safety as well, and the public does have a right to know about threats to their safety. That includes not only prowlers in their neighborhood. You have a right to know that a bank down the street was just robbed, that a child abduction was attempted on the next street, or that there is a fugitive on the loose in your immediate area so you can take action to protect yourself, or yes even that your neighbor is driving on a SUSPENDED license. Again, MY safety is paramount over his stupidity. The only alternative is to assume these threats are always nearby and arm yourself - turning your neighborhood into a scene from Mad Max because the police cannot be everywhere at once instantly. There are also issues of officer safety in that for ever person out to do harm to the police, there are hundreds who are watching THEIR backs when they are in the area. This concept that police don't need anyone's help is something they need to get over... yesterday. They need to drop the egos and admit they can't do everything themselves. They need tips. They need eyes. They need ears. And you don't get those when you keep people in the dark.

Hiding things from the public also creates a situation where crimes DO go unsolved due to lack of feedback from the public. Shortly before that area I mentioned went encrypted, there was a case where someone reported a suspicious vehicle on Halloween night. I was on duty at the time. A week later, I was monitoring the dispatch channel from home (on my HP-1 FWIW) and heard the call for a suspicious vehicle of the same description (same color, make, and model) in a neighboring community. I

called the dispatch desk and reminded them of the incident in case it was the same person. That info was not mentioned in the dispatch or by any other cars. That puts a lot more ammo in the belt of the officers investigating the second case since this may be a repeat offender and a credible threat. That would not have been possible had they been encrypted, as I do not leave my portable on 24/7 to monitor (and I happen to live in another area).

All that said, how do you know to ask for a recording when you don't know there is a reason you need the information contained within? Do you routinely ask for everything and become the annoying target that the PD will try to retaliate against?

Transparency in government is what our country was founded on. Its loss will be a key in its decline.

Well, drawn out I guess it was. :-\

Next they will take away the right to own guns in the name of "officer safety". After all, a better case can be made for that than for hiding dispatches from the public. But, that IS what some in the government want to do next. (but that's another thread for a different forum)

And let's PLEASE try to limit the replies on this subject despite my failure to do that.

Joe M.

Ok, you want to make it personal... that figures.

I can understand why you became a reporter, clearly you're another socialist libtard, not really as well informed as you imagined and hope to fix that. It can also make you somewhat defensive. I see that too. (And your boy Bernie, is an idiot.)

Being a dispatcher in Mayberry may be awesome Officer Fife, but here in the real world, there are valid reasons to shield those working for us. That protection also goes to those that come into contact with the protectors no matter what the cause. And it's right that we should protect them all; encryption is but one tool for that job that ultimately costs us absolutely nothing.

I spent a full 34 year career on the streets, cleaning up the messes that happen in society. Most of it was 'good', some of it was 'bad' and some of it no one ever wants to see. Maybe you did too, it depends on what your definition of involved is though I doubt you've had a homicide at the grade school. I have been around law enforcement for the majority of my life, spent most of the career as a line fire officer as well as EMT. That was my chosen profession and I'd do it all again in a heartbeat, the good outweighs that bad, almost any day. I'm one of the fortunate folk, I got out intact and healthy and now I get to do as I please.

If it takes encryption to make it safer and easier for the next generation of fire and police, fine. I am not worried about them. I'm not worried about the 1% of criminals that /might/ listen in, or the other 99% that clearly aren't bright in the first place or they'd have better behavior. What protects those who watch over our safety, in turn protects us too. Unlike many (obviously) I don't think that big brother or our government is out to get me; I understand that I'm just one of many, too small a part of the whole to be concerned with. And having worked for the government, I completely understand that's it's not THAT organized in the first place to manage such skullduggery; it's just as flawed as everyone else. It's worst problem is mismanagement of resources, not trying to keep a secret (which is impossible).

I want my protectors to have what they need to do a good job; period. Encryption violates no ones rights. It ultimately protects them and by relation, us.

You are right about one thing; most of the air traffic is benign, boring and not worth hearing. But for the smaller percentage of the time encryption is needed, WHY complicate the lives of the ones IN the emergency? It's too easy in the moment to forget to flip to the

'secure' channel to describe a horrific scene that just arrived at; for the rest of the boring traffic, who cares? The very secret stuff usually moves to cell phones which aren't as convenient, if they work at all.

This isn't communism or socialism, it's about protecting the rights and privacy of the individual, something you should be proud to do. As an 'informed' reporter, you should also know that the vast majority of the public doesn't WANT to know what goes on. They simply want to know that 'stuff' is being taken care of, that their lives are intact and safe, please pass the wine. Most of them choose to be ignorant and all in all I get that too; they're just aware enough to know it's 'bad out there' and it frightens them. It should, but not the reasons you're afraid of.

If you're concerned about civil rights violations, public safety folks get the same rights, the same protections; but only on the surface. The percentage of anyone 'bad' in any job is consistent, proven many times over. But we hold public safety to a higher standard, tests are tighter to filter them (which works to some degree) and then are shocked to find out, a few slipped through (or became damaged) and are just as flawed as the rest of us. That smaller percentage gets more press and the public view becomes skewed and it harms all of public safety when those few go sideways (and that ALWAYS happens in the public view, cell phones recording; not on a scanner). Encryption won't affect that; that's a social issue.

Again, if something as trivial as encryption helps, I have no issue with that. I'm just as curious as the rest of the listeners, I want to know what's going on but I also know what the public safety folks are going through, I WAS one. It isn't about asking what one wants for lunch and we're WAY beyond the days of audio inversion (easily overcome for about 75 cents back then too, it was worthless).

In the larger scheme of things, encryption is minor. There are more important issues of the day, with better ways to find them out besides listening to a scanner.

NOW can we get back to the topic of scanners?

Rick

I'll be brief. Then I'm done with this thread.

The government is an inefficient mess. Everyone knows this, it's the same in most countries; we're human. We do what we can.

HIPPA is a bit more than names. There can be NO association of event to the person, so you'll hear patient one-xxx and only the barest of identifiers. Even some at the hospital don't get the details and the law has BIG SHARP teeth.

The cops have been begging for help for decades; but on deaf ears or filtered through politics. Yes, a choice to be a cop was made, which is a high calling, just like being a soldier or any other profession that seeks to help or protect those in need. For that, you honor them, give them what they need to do the job safely; whatever tool they need, right up to where it invades our privacy (encryption doesn't). You don't lose transparency in that.

If you know your neighbor has a suspended license, how does that make you safer? Nothing you know, will stop them from driving again; from being stupid, again.

Every cop I know would be pleased (at least around here) if all the LAW ABIDING citizens were armed AND trained to use those arms. They'd also appreciate knowing you have their back.

They are learning to use social media to spread the word and it works even better than a scanner (because it is more popular AND has pictures). They hide VERY little except on occasion to see what they get back from the public, which only an insider would know; or what the public doesn't really WANT to know.

You ask for the recording when the cell phone pictures get posted, pretty simple.

73,

Rick

And with that this thread ends. I enjoy a good debate as much as the next person (or more), but when it gets personal, I have to kill it.

That is not to say that anything on the original topic about Mobile is not welcomed to be posted.

Some reading material for you, Mark:
<<https://www.google.com/search?q=law%2Bbans%2Brecording%2Bpolice&ie=utf-8&oe=utf-8>>

While these are mostly proposed laws, there are clearly attempts, if not
laws already in place.

With that, I'm done with this issue on this forum.

The issue, while I'm not about to debate it, brings to light a point which I have expressed a concern over here and other forums. And that is simply this... The issue is making more police aware of scanner enthusiasts who show up at scenes where they are working. And it's just a matter of time before they look for other ways to place restrictions on how a scanner is used, such as enforcing the HIPAA Act. (The improper acquisition/ dispersion of a person's medical records). Now, I'm not suggesting the scanning public is knowingly doing something illegal, most are ignorant of their actions that authorities frown upon.

I won't elaborate on how there may be a concern, but offer a suggestion to scanner users... When at the scene, be conscious of the audio coming from your scanner. The use of earphones/buds guarantees any sensitive info will not be overheard. The days of being proud of your scanner's capabilities, showing off to bystanders, are gone. The "look at me, I can hear all the action" attitude should no longer be in play. And when that cop asks you to turn down the volume, comply without question... He's doing you a favor. The less we draw attention to their concerns, the better off we will be.

I'm in favor of promoting the hobby just as much as the next guy. But it MUST be done responsibly.

Just sayin,

Bill

Rick,

Nicely said... Eloquent.

Right up until your last sentence, getting back to scanners... If everything were encrypted, we wouldn't be here in the first place talking about scanners. Because they wouldn't exist!

But I know you are referring to the current, realistic scanning world. And I agree with you, ALL you've written is factually correct.

I for one thank you for taking the time to express your views, and going forward, hope we all keep foremost in our thoughts this forum's dedication to allowing intelligent discussions related to the hobby.

An apology to Joe M. for not mentioning his contributions on the subject in my reply to Rick... I hold with equal respect Joe's views on the subject. Also eloquent and factual in its context. We, as citizens of this country, hold dear our Bill of Rights, the Constitution, and Constitutional Amendments. For without them, this discussion would never be possible.

Again, with these rights come responsibility. I'd rather have the choice to act responsibly than be told that need does not exist, there are others that control my life choices.

You are right about one thing; most of the air traffic is benign, boring and not worth hearing. But for the smaller percentage of the time encryption is needed, WHY complicate the lives of the ones IN the emergency? It's too easy in the moment to forget to flip to the 'secure' channel to describe a horrific scene that just arrived at; for the rest of the boring traffic, who cares? The very secret stuff usually moves to cell phones which aren't as convenient, if they work at all.
This isn't communism or socialism, it's about protecting the rights and privacy of the individual, something you should be proud to do. As an 'informed' reporter, you should also know that the vast majority of the public doesn't WANT to know what goes on. They simply want to know that 'stuff' is being taken care of, that their lives are intact and safe, please pass the wine. Most of them choose to be ignorant and all in all I get that too; they're just aware enough to know it's 'bad out there' and it frightens them. It should, but not the reasons you're afraid of.
If you're concerned about civil rights violations, public safety folks get the same rights, the same protections; but only on the surface. The percentage of anyone 'bad' in any job is consistent, proven many times over. But we hold public safety to a higher standard, tests are tighter to filter them (which works to some degree) and then are shocked to find out, a few slipped through (or became damaged) and are just as flawed as the rest of us. That smaller percentage gets more press and the public view becomes skewed and it harms all of public safety when those few go sideways (and that ALWAYS happens in the public view, cell phones recording; not on a scanner). Encryption won't affect that; that's a social issue.
Again, if something as trivial as encryption helps, I have no issue with that. I'm just as curious as the rest of the listeners, I want to know what's going on but I also know what the public safety folks are going through, I WAS one. It isn't about asking what one wants for lunch and we're WAY beyond the days of audio inversion (easily overcome for about 75 cents back then too, it was worthless).

In the larger scheme of things, encryption is minor. There are more important issues of the day, with better ways to find them out besides listening to a scanner.

NOW can we get back to the topic of scanners?
Rick

> Having been involved in law enforcement as a school police officer and as a dispatcher and also firefighter and EMT I know exactly what goes on. Including what they don't want the public to know. And in the time I was dispatching we used speech inversion on so few occasions it wasn't worth the money for it. Usually it was used when the officers asked me what I wanted for dinner! We used it otherwise on one call involving a minor female where I had to send an officer to her home to await her parents and explain why she was transported to the hospital. We also used it a couple times with a specific suspect who listened to us.
> 99% of traffic isn't sensitive and doesn't need encrypted. And yes, I do want to know when officers are trying to locate a suspect in my area or when a pursuit is headed my way. I don't want to get hit by some jackass who won't stop for police. And I don't want some officer searching for a suspect and see me carrying a gun on my property and thinking I'm the suspect. One of my dogs already helped catch one fool who ran from police. Most of the officers here know me and know I will back them up....but that new guy may not know that.

There are laws that exist that are supposed to restrict the ability to record police on video and/or audio. The courts however have struck them down. The end result is that if a person is where they are allowed to be they can pretty much film what and who they want, including the police.

Fire has gotten involved in EMS to a much larger degree than in the past. The paid departments see it as a way of better securing their manpower levels. With EMS come the possibilities/probabilities of dispatching their own paramedic squads and ambulances at a savings compared to contracted services. And with this eventuality comes the concern for protecting patient privacy. (In which case the public should express their preference to assure the Med channels be protected but leave the general fire dispatch in the open.)

No, nothing but a subscriber radio can be used on an encrypted system.

Best bet is to fight city hall and get it unencrypted.

My only comment on this is that I don't care if all other channels are encrypted, but main dispatch should never be. Encrypt everything else, but not that.

this whole thing boils down to plain and simple common sense.we all like to hear and know what is going on but it only takes a few to ruin the pleasure of other people.i would think that some of those that are ambulance and police chasers might could be arrested for interfering with ambulance and police activities.

Believe it or not you can have a Freedom of Information request for any kind of specific radio traffic. Yes the radio waves are encrypted some places. However the audio from that traffic is recorded 24 hours a day 7 days a week. The public does have a right to hear that. However, you have to show they need for the traffic such as a criminal or civil case. Law enforcement and First Responders cannot operate in a vacuum. While I do agree there are times when traffic does need to be encrypted but the greatest majority in this most traffic is routine. I know what I'm talking about because I was in the media for 40 years I also work for my local police department for some time as a radio dispatcher. But, listening to scanner Traffic the band is far different then when we listen to the old scanners with just a few channels. Now departments have all kinds of different channels on the same frequencies and it takes a very expensive radio to hear even unencrypted traffic. Get ready to spend at least $500 at the very least. You need to also set aside money for software to keep up with what you are listening to. I now live in the Northern Virginia area and there are literally thousands radio channels... Some of which are encrypted. But if you just want to listen to a couple of channels in your area check broadcastify.com and see if someone there has put them on the Internet for you at no charge.

At least in the First Federal Circuit (most of New England), it is legal to record the police in a public area. The case, if you want to look it up is Glik v. Cunniffe.

Attorneys who know this stuff say that there is a 4th Amendment due process right to record the police. It's even legal to record interactions with the TSA at an airport.

I've responded to N1CHU's comments about HIPAA elsewhere, so I'll only briefly state that there is an exemption under the regulations for emergency communications so there is no need to encrypt EMS radio traffic. HIPAA also only applies to health care providers handling certain medical records and their obligation not to intentionally or negligently divulge Protected Health Information (PHI) to people who have no need to know it.

Mostly, I think encryption is a very bad thing. Public sector employees (of which I was one for many years) should be subject to scrutiny of their actions by the public. Encryption mostly defeats that and even if you ask for a transcription of a radio broadcast it's not going to be in real time. That's in addition to any "fees" an agency may add to try to make obtaining a transcription too expensive and time consuming for people. Since almost all public safety phone and radio traffic is recorded, you can FOIA a copy, but that too could become costly.

Yep.

But you will note that I said *I* was done with the issue.

Since I'm replying to your question, I will thank those who are posting
factual information on this issue - specifically that courts are
striking these laws down (and they must already be laws for the courts
to make that ruling).

That works for me Matthew. Anything they don't want heard goes out over their proprietary MDT's or cell phones. Which is the way departments that don't have encryption do it currently. It satisfies the need to protect sensitive and private while allowing the common, routine traffic to continue being broadcast in the clear.

Topic: 3074 Message: 3363

Slow down, punctuate and PLEASE describe just WHAT you are trying to do. Are you trying to program something that is not in RR or what?

There is no need for hex or decimal - what trunked system are you trying to program?

To me - it looks like most systems in the county are not trunked.
Lake County, Indiana (IN) Scanner Frequencies and Radio Frequency Reference

I you are not receiving via setting the zipcode and a low range, you have other issues, a defective scanner or antenna, or bad reception area.
As suggested - turn on the service types - custom 1 will be grayed out, unless there is something programed for it. Any type not programmed will be grayed out as well.

Subject: Re: [BCD536HP] Re: Radio reference forum??How to find my area for a question on talk groups, programming?

  Hello,still no local Police or fire,St. John,Cedar Lake,Crown Point,Lowell,Highland,Hammond,Munster,etc,all of the local ares within and under 20 or so miles,or more. I even went to put the Talk group DEC numbers in manually and the scanner tells me Frequency Exists,so why will they not come over the scanner?????I put in a half dozen DEC numbers for the Talk groups and still nothing at all,,ZIP,they exist,but nothing,can this be telling me that the scanner may have a problem???Or should I change to the HEX numbers for the talkgroups and see what happens??The (MOT/P25) ID format is set to Decimal Format,,andand the (EDCS) ID Format is set to AFS Format,which I believe is correct,as this is what was set on Sentinel software. Like I am saying,the Talk group ID's,DEC,are set,but no response at all from these area Departments at all.And no difference between Windows 7 or Windows 8 turning on Custom 1,still will not transfer this checked,even with 2 system favorites being downloaded to the scanner.For some reason,this T,,TDMA Talk groups have me bugged,I was told this should still come on,as this is just nothing but a Phase II system and should monitor regardless with this scanner..Still drawing straws John?????I think I may still call Uniden,I am working with you and appreciate all of your help and trial and errors,everything you tell me to do makes sense,but the scanner seems to not want to listen to our commands,or a glitch somewhere we just cannot find,,really disappointed in this scanner,thought it would be easy.Trunking discovery on the Lake County Public safety does not pick up anything,Close call does nothing,and the enter Zip code does nothing,picks up things in Illinois,3 miles from state line,but not sure if working on picking up and Phase II,P 25 systems on anything.The Motorola works,Conventional works,still wondering why the P 25 and or Phase II will not work....Thanks again,gonna play around again for a while before I have to cut grass,and the kids want the pool open.Talk soon,any more ideas,running out myself...Thanks my friend,Talk soon John,,,,Mark,,Cedar Lake Indiana,,,,

Gary,

My concern over HIPAA has to do with the intent, or the spirit of the law... Not necessarily the letter of the law. It's intent is to keep medical records private. Regardless of how they may be accessed.

Sorry if I wasn't clear...

Bill

On Jun 9, 2016, at 11:08 AM, Gary Saffer ghs159@comcast.net [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

At least in the First Federal Circuit (most of New England), it is legal to record the police in a public area. The case, if you want to look it up is Glik v. Cunniffe.

Attorneys who know this stuff say that there is a 4th Amendment due process right to record the police. It's even legal to record interactions with the TSA at an airport.

I've responded to N1CHU's comments about HIPAA elsewhere, so I'll only briefly state that there is an exemption under the regulations for emergency communications so there is no need to encrypt EMS radio traffic. HIPAA also only applies to health care providers handling certain medical records and their obligation not to intentionally or negligently divulge Protected Health Information (PHI) to people who have no need to know it.

Mostly, I think encryption is a very bad thing. Public sector employees (of which I was one for many years) should be subject to scrutiny of their actions by the public. Encryption mostly defeats that and even if you ask for a transcription of a radio broadcast it's not going to be in real time. That's in addition to any "fees" an agency may add to try to make obtaining a transcription too expensive and time consuming for people. Since almost all public safety phone and radio traffic is recorded, you can FOIA a copy, but that too could become costly.

3365. Why is WiFi audio not working

Yahoo group: BCD536HP
Date: 2016-06-09 18:57:17 UTC
From: Evan Platt
Topic: 3365 Message: 3365

So - I didn't even realize the 536 had wifi audio... I'm using Proscan and (thanks to people here) know that I can stream the audio from the wifi dongle to Proscan.

So initially it wasn't working. Then started working. And now stopped again. I figured it was ProScan, but then tried rtsp://192.168.1.177/au:scanner.au in VLC. No go. The ProScan shows 0 for bytes tx & rx. It JUST started working as I was typing this, then stopped again.

Any suggestions on what to look for?

Scanner shows connected, I can ping it with no packet loss...I'm familiar with networking, but obviously not familiar with what the scanner is doing and what can go wrong. :)

Thanks.

Check for a change in the assigned IP.

I would also recommend making that IP
fixed in your router to avoid that issue.

Thanks for the reply - yep, all my computers / devices are set a static IP based on their MAC address from the router. As I mentioned, when this was happening, I was pinging the IP of the WiFi Adapter with no packet loss.

From: Rick WA6NHC
Topic: 3365 Message: 3368

Ping is nearly meaningless. If you want to use it for test, try using it with options (like ping -t <address>) but it's still only an "Are you there?" test.

Once the software connection is made, the scanner audio is sent via UDP packets, which do not get any acknowledgment (TCP does). Which by definition means that if they get lost, no one knows (sender doesn't know it didn't arrive, receiver doesn't know it was sent). In short, it's 'fragile', packet loss is a fact of life, worse with UDP (there is no resend request as there is in other modes). (ping is an ICMP packet, but it's also 'special' in format)

The cause in your case could be many things, but I'd start with signal strength (scanner to router/device); in general network integrity. Then break it down to which part could be weak, scanner to router, router itself, router to device. Is there anything that could be interfering? Is the software itself faulty (does a restart 'fix' the problem)? Is packet latency an issue (is it arriving too late to be used)?

And finally, the scanner itself. The CPU was chosen to perform a lot of things and is not designed to be a multi point broadcast device (it talks to ONE user for audio, only ONE at a time, it gets confused quickly so don't throw a lot of software at it, reset the dongle after each test). If you're not up to date with the firmware (likely are) it could also be part of the problem.

My guesses would be your networking or you're trying to get it to talk to more than one device/program (it won't). If you're going device-scanner direct (not via LAN/router), neither has a lot of range (measured in feet, they're both low output power).

3369. Re: OT: Re: [BCD536HP] BCD536 ProVoice Harris Radio Encrypted System

Yahoo group: BCD536HP
Date: 2016-06-09 19:24:23 UTC
From: John
Topic: 3328 Message: 3369

In today's world, nothing is private or personal except in your own home. And even that is iffy at times (one neighbor thinks it's ok to walk right into your home when he feels like it then whines because I carry a gun after catching him).
Yet police want to hide what they are doing and make a claim it's because of criminals with scanners. But the truth is less than 1% of criminals use a scanner, yet the majority suffers because of that less than 1%.
Here there is very little encryption. Police realize the value of those extra ears vs the few bad apples. One department uses two unencrypted channels for each district and one encrypted channel. Vice and SWAT are encrypted while investigation one and two are clear and three us encrypted. It works, but still too many encrypted channels. Too much to hide.
North and Central parts of the state most stuff is clear. Get to the South part of the state and more encryption including channels that are in the clear here. That makes zero sense! So do the troopers in the Southern part of the state have to hide what they are doing and the rest of the state doesn't?
Recently the governor's security and Lt governor both went from encrypted to clear. Funny, the Republican went clear while the prior Democrat had it encrypted, but then he had a lot to hide like promoting a book on taxpayers time and not running the state. The present governor is very open compared to the previous administration.
I find it interesting that here it's the Democratic run counties that use encryption the most. Those fortunately are far and few but its still an insult to taxpayers, from either party. Even the feds are almost all in the clear here and that includes military installations.
One county considered going encrypted here but decided after numerous calls and letters to the department and local paper that they will only use it on an "as needed basis". Since then they have used it once!
So, as this one county learned it's best to keep things so the extra ears can hear them. Besides being able to help, even if it means staying away from an area, those extra ears may see something too.
I know it's helped here in my county, more times than they can count.

>That works for me Matthew. Anything they don't want heard goes out over their proprietary MDT's or cell phones.

Which is the way departments that don't have encryption do it currently. It satisfies the need to protect sensitive and private while allowing the common, routine traffic to continue being broadcast in the clear.

From: Evan Platt
Topic: 3365 Message: 3370

Thanks for the reply - yep, I was doing a -t. Signal should be fine. Maybe I'll try the direct connect route and see if that makes a difference. Scanner is 5 feet (literally) from computer. Computer and scanner are 20 feet from router...And no, scanner has just one connection.

So looks like it connected, but the 536 assigned itself 192.168.1.1 . Can I change that? 192.168.1.1 is the IP of my router on my network. I don't see anything in WiFi setup on the 536 to change this.

Make sure it's not connected in Access
Point mode. Select Infrastructure mode.

From: Evan Platt
Topic: 3365 Message: 3373

Well, I was taking Rick's suggestion to try access point mode. :)
My desktop computer/ network is 192.1681.1 for the router and 192.168.1.X
for devices on the network. Desktop computer is connected via ethernet
cable. When I connected via AP mode from the wifi on my desktop to the
scanner, the scanner picked 192.168.1.1 .. which is going to cause a
conflict on my desktop.

It won't cause an issue with your desktop (or router) since it would be
on a different network in Access Point mode. Specifically, it would be
on a network that consists of only your scanner and your desktop.

If you want it on your LAN, you would have to use Infrastructure Mode.
Then it will be assigned an IP by your router.

From: Evan Platt
Topic: 3365 Message: 3375

Well, what I mean is my desktop is now connected to the router (ethernet) and has a 192.168.1.x IP with a gateway / router of 192.168.1.1.
The desktop is also connected to the scanner as an access point, where the scanner has an IP of 192.168.1.1.

Trying to connect proscan audio to 192.168.1.1 IP fails. Opening 192.168.1.1 in my desktops browser brings up the router's admin page. So unless I'm missing something, this won't work, right?

That still won't be an issue. Your PC should see the two networks as
different for each card. You DO have two network cards in your PC,
right? If you only have one network card, you can only be connected to
one network at a time which is why you are seeing intermittent operation
- you are either connected to the LAN or the scanner.

If you want to connect to both at the same time, you have to use
Infrastructure Mode.

Yep, two NIC's, wired and wireless.

So obviously I'm missing something here, or I'm not explaining it well. On my wired network, 192.168.1.1 is my router. If I ping it and -A (resolve name), I get the router name. If I browse to http://192.168.1.1 , I get my routers homepage. If I do a nbtstat -a, I get the MAC of the router. If I try to connect to audio to 192.168.1.1 in ProScan, I very quickly get unable to connect to tcp port 192.168.1.1:554. In short, my PC is - as it should, seeing the router as 192.168.1.1 . Since my router provides DNS, 192.168.1.1 is also my DNS server.

So - I guess I don't see how 192.168.1.1 can be two different things. I can't tell ProScan to use 192.168.1.1 on my WiFi network (since the scanner is also 192.168.1.1 on the WiFi network). Yes, I have years of Network experience - but I'm being honest, never connected to two networks at once, so this is out of my area of expertise.

You need to change one router from the 198.162.1.1 they both can't have the same address or things won't work properly.
Also you would need to have the scanner in Infrastructure mode.

Well hoping not to have to change the router - that's going to require changing a ton of stuff around. Sounds like I can't change the scanner. Was putting it in AP mode to diagnose wifi problems, but sound like this is a no go...

Actually they are trunked. Look at the bottom of the page and you see Lake County Public Safety P25 Phase II system.

3381. Re: OT: Re: [BCD536HP] BCD536 ProVoice Harris Radio Encrypted System

Yahoo group: BCD536HP
Date: 2016-06-09 20:57:22 UTC
From: N1CHU
Topic: 3328 Message: 3381

John,

Question;
If I were to lock down a BCD536HP on an encrypted channel and turn on record for a given time, the unintelligible transmissions would be recorded... and would be replayed without spaces between each transmission? And if the agency running the encrypted channel in question were also recording with a "like" type of recorder that does not record between transmissions, the total amount of transmissions for a given length of time should be equal, or close, upon comparing how much the scanner received vs the "official" agency recording. If this can be assumed, any public committee set up to review these encrypted playbacks would be able to determine if anything was erased or being withheld. Does that sound correct?

Just like Nixon after the Watergate scandal. The audio tapes from the Oval Office were missing quite a few minutes when a determination was being made about Nixon having prior knowledge of the Watergate break-in.

So I'm wondering if this recording comparison would be possible. It seems feasible to me. What also sounds reasonable is given the fact, as you say, the level of corruption in today's society, which is evident at all levels (Nixon), the understanding anyone using an encrypted system has (that the transmissions are recorded), they deserve to be caught and charged with gross stupidity!... for using a system they know is recording every word they utter. But true, there are times we would all like to take back something we said, and doctoring the recordings is one of the ways people try to make things go away.

I believe there is a need to pass "sensitive" information in an expeditious manner, some use encryption, others use MDT's and cell phones. Not a big fan of it because it affords improper use of the comm system and in turn, the need of an oversight committee.

Interesting that no one is complaining about not knowing what is going on when MDT's or cell phones are used for official police business. It's only the encrypted stuff on frequencies a scanner can hear that we are concerned with... Wondering why that is? That's where all the juicy stuff is!

On Jun 9, 2016, at 3:24 PM, John johnstark@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

In today's world, nothing is private or personal except in your own home. And even that is iffy at times (one neighbor thinks it's ok to walk right into your home when he feels like it then whines because I carry a gun after catching him).
Yet police want to hide what they are doing and make a claim it's because of criminals with scanners. But the truth is less than 1% of criminals use a scanner, yet the majority

suffers because of that less than 1%.
Here there is very little encryption. Police realize the value of those extra ears vs the few bad apples. One department uses two unencrypted channels for each district and one encrypted channel. Vice and SWAT are encrypted while investigation one and two are clear and three us encrypted. It works, but still too many encrypted channels. Too much to hide. North and Central parts of the state most stuff is clear. Get to the South part of the state and more encryption including channels that are in the clear here. That makes zero sense! So do the troopers in the Southern part of the state have to hide what they are doing and the rest of the state doesn't?
Recently the governor's security and Lt governor both went from encrypted to clear. Funny, the Republican went clear while the prior Democrat had it encrypted, but then he had a lot to hide like promoting a book on taxpayers time and not running the state. The present governor is very open compared to the previous administration.
I find it interesting that here it's the Democratic run counties that use encryption the most. Those fortunately are far and few but its still an insult to taxpayers, from either party. Even the feds are almost all in the clear here and that includes military installations.
One county considered going encrypted here but decided after numerous calls and letters to the department and local paper that they will only use it on an "as needed basis". Since then they have used it once!
So, as this one county learned it's best to keep things so the extra ears can hear them. Besides being able to help, even if it means staying away from an area, those extra ears may see something too.
I know it's helped here in my county, more times than they can count.

Dual connections is not my forte either. But, the PC should be able to see the two networks as separate. But, you are using separate networks with the same IP block which is likely where the issue is. I use two networks, but I make sure all the IPs are unique in case they have to be tied together (in case one gateway fails). That includes the routers which in your case is the only IP that would need changed (plus any PCs pointing to that IP).

I guess an obvious question is why you don't want the scanner on the LAN and just use one network.

Other than that, I guess you would have to change the network IP block of the LAN.

I really wish you could simply specify the IP of the scanner, as I use fixed IPs as well, and would prefer to simply set the scanner's IP.

Joe M.
